SUMMARY

The Sandalwood Commercial Development Project and Finance Map (project or proposed project) is located in the City of Calimesa (City), Riverside County (County), California. The approximate 9.3-acre on-site project components evaluated in this report consist of two parcels (Assessor's Parcel Numbers [APN] 411-210-006 and -024) plus an additional 1.9-acre off-site right-of-way area, for a total 11.2-acre project site. The project consists of a proposed subdivision of APN 411-210-024, which would subdivide the two parcels into three separate parcels (proposed Parcels 1 through 3). No development is proposed within the northern Parcel 1 or Parcel 2, which are collectively referred to in this report as the Northern Parcels. However, Parcels 1 and 2 are still subject to the entitlement approval referred to as a Finance Map, which is associated with the subdivision approval process. The only physical development proposed on any of the three parcels is the commercial development (Sandalwood Commercial Development) located within the southernmost parcel, referred to as Parcel 3.

Under prior environmental review and regulatory permits, the project site was graded in 2009, and no other work has occurred in the project site since 2009. Grading included impacts to jurisdictional resources and Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) Riparian/Riverine Areas. Because the prior project received Section 1602 approval from the California Department of Fish and Wildlife (CDFW) via Operation of Law, mitigation requirements for impacts to CDFW jurisdiction were likely described in the Notification of Lake or Streambed Alteration (LSA). The project proponent involved with the prior project and associated approvals is deceased, and the current landowner and CDFW are unable to locate the LSA to verify the required mitigation for the prior project. Additionally, the documentation of mitigation implementation cannot be located. A Determination of Biologically Equivalent or Superior Preservation (DBESP) and appropriate mitigation would also have been required. However, a DBESP cannot be located by the landowner, Regional Conservation Authority (RCA), or the Wildlife Agencies (collectively, CDFW and U.S. Fish and Wildlife Service [USFWS]). Given that mitigation requirements and implementation cannot be verified, the current Project Proponent has been coordinating with the landowner, the Wildlife Agencies, and the Rivers and Lands Conservancy, and has identified a mitigation approach to compensate for prior project impacts to CDFW jurisdiction and MSHCP Riparian/Riverine Areas. Based on this coordination, an after-the-fact DBESP was also prepared to demonstrate that the proposed mitigation provides equivalent or superior preservation for prior impacts that occurred on the project site. No mitigation was required by U.S. Army Corps of Engineers in the Section 404 Nationwide Permit, and Regional Water Quality Control Board (RWQCB) determined no action would be taken in the Section 401 Water Quality Certification.

The project site is located within the Pass Area Plan of the MSHCP. The northern, northeastern, and western portions of the project site fall within the northeastern corner of Cell 323, and the southern and southeastern portions of the project site fall within the northwest-central portion of Cell 326. Because the proposed project is located within MSHCP Criteria Cells, the project is subject to the Habitat Acquisition and Negotiation Strategy (HANS) process with the City, followed by the Joint Project Review (JPR) process with the RCA and the Wildlife Agencies to verify that the project is consistent with MSHCP and conservation goals. Given that the project site does not encompass areas targeted for conservation, the project will not conflict with the conservation criteria described for Cells 323 and 326. A HANS application was submitted to the City in August 2022, and the JPR application was submitted to the RCA in September 2022. The Project Proponent is working to respond to JPR comments from RCA, which includes submitting an after-the-fact DBESP. After RCA issues its consistency findings, the Wildlife Agencies will perform their own joint review and provide their comments or concurrence with RCA's

findings. Under the City's direction, JPR processing, including RCA and Wildlife Agencies approval of the DBESP, will be completed before the Final Mitigated Negative Declaration is prepared.

The project site is located within an MSHCP Narrow Endemic Plant Species Survey Area and burrowing owl (*Athene cunicularia*; BUOW) Survey Area. HELIX Environmental Planning, Inc. conducted a general biological survey, including vegetation mapping and a general habitat assessment; Step I and Step II BUOW surveys; a Crotch's bumble bee (*Bombus crotchii*; CBB) habitat assessment; a jurisdictional assessment; and an MSHCP Riparian/Riverine and Vernal Pool habitat assessment.

The project site is dominated by wild oats and annual brome grasslands, and the site appears to be mowed or disced on a regular basis. A small area of Peruvian pepper trees (*Schinus molle*) was noted along the eastern project site boundary. The western boundary of the project site consists of a paved right-of-way associated with 7th Street.

The project site does not support suitable habitat for rare plant species (including MSHCP Narrow Endemic Plant Species Survey Area species), and no sensitive plant communities were observed. Potentially suitable BUOW habitat and one suitable burrow and one burrow surrogate were observed in the project site; however, BUOW or BUOW sign were not detected during the focused survey. A CBB habitat assessment was performed in the project site, and no suitable habitat was observed. The project site also supports suitable habitat for nesting migratory bird species. No jurisdictional features regulated by the U.S. Army Corps of Engineers, the RWQCB, or the California Department of Fish and Wildlife were observed on the project site during the jurisdictional assessment. There are currently no Riparian/Riverine or Vernal Pool resources in the project site as defined by the MSHCP. The project site does not function as a regional wildlife corridor because it does not directly connect large blocks of habitat. The project site is not identified by the MSHCP (County 2003) as being part of a local or regional corridor or linkage; the nearest linkage is Proposed Constrained Linkage 23, approximately 0.25 mile south of the project site. Some wildlife may use the project site for foraging and/or nesting, but the use of the project site is restricted due to limited vegetative cover, adjacent disturbance from existing human development, and Interstate 10 to the east.

The project would permanently impact approximately 4.5 acres (3.8 acres on-site, 0.7 acre off-site) and temporarily impact 0.4 acre (off-site only) of the project site, including wild oats and annual brome grassland, pepper tree grove, existing developed areas, and disturbed habitat. Potential significant impacts were identified for BUOW (if present during the 30-day pre-construction survey) and nesting bird species. The project is required to comply with the regulations of the MSHCP. No development is proposed on the Northern Parcels, although the southern portion of Parcel 2 will be temporarily impacted by over-excavation during construction of the Sandalwood Commercial Development. Measures have been incorporated into the proposed project to avoid and/or minimize impacts to biological resources, including the following: BUOW, migratory nesting bird species, mitigation for 2009 impacts to CDFW jurisdictional streambed and MSHCP Riparian/Riverine Areas, consistency with MSHCP landscaping restrictions, and payment of MSHCP Local Mitigation Development Fees. The successful implementation of these measures would mitigate potential impacts to below a level of significance.

1.0 INTRODUCTION

1.1 PURPOSE OF THE REPORT

The Sandalwood Commercial Development Project and Finance Map (project or proposed project) is located in the City of Calimesa (City), Riverside County (County), California. The project consists of a proposed subdivision of two parcels (Assessor's Parcel Numbers [APN] 411-210-006 and -024) into three separate parcels (Parcels 1 through 3), with a proposed commercial development (Sandalwood Commercial Development) on the southernmost parcel (Parcel 3). The approximate 9.3-acre project site evaluated in this report consists of two parcels (Assessor's Parcel Numbers [APN] 411-210-006 and -024) plus an additional 1.9-acre off-site right-of-way (ROW) area, for a total 11.2-acre project site.

This report provides the City (California Environmental Quality Act [CEQA] lead agency), resource agencies, and the public with current biological data to satisfy the review of the proposed project. The purpose of this report is to document the existing biological conditions on and in the immediate vicinity of the project and provide an analysis of potential direct or indirect impacts to sensitive biological resources with respect to local, State, and federal policy. This report provides the biological resources technical documentation necessary for project review under CEQA by the City and demonstrates consistency with the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP; County 2003).

1.2 PROJECT LOCATION

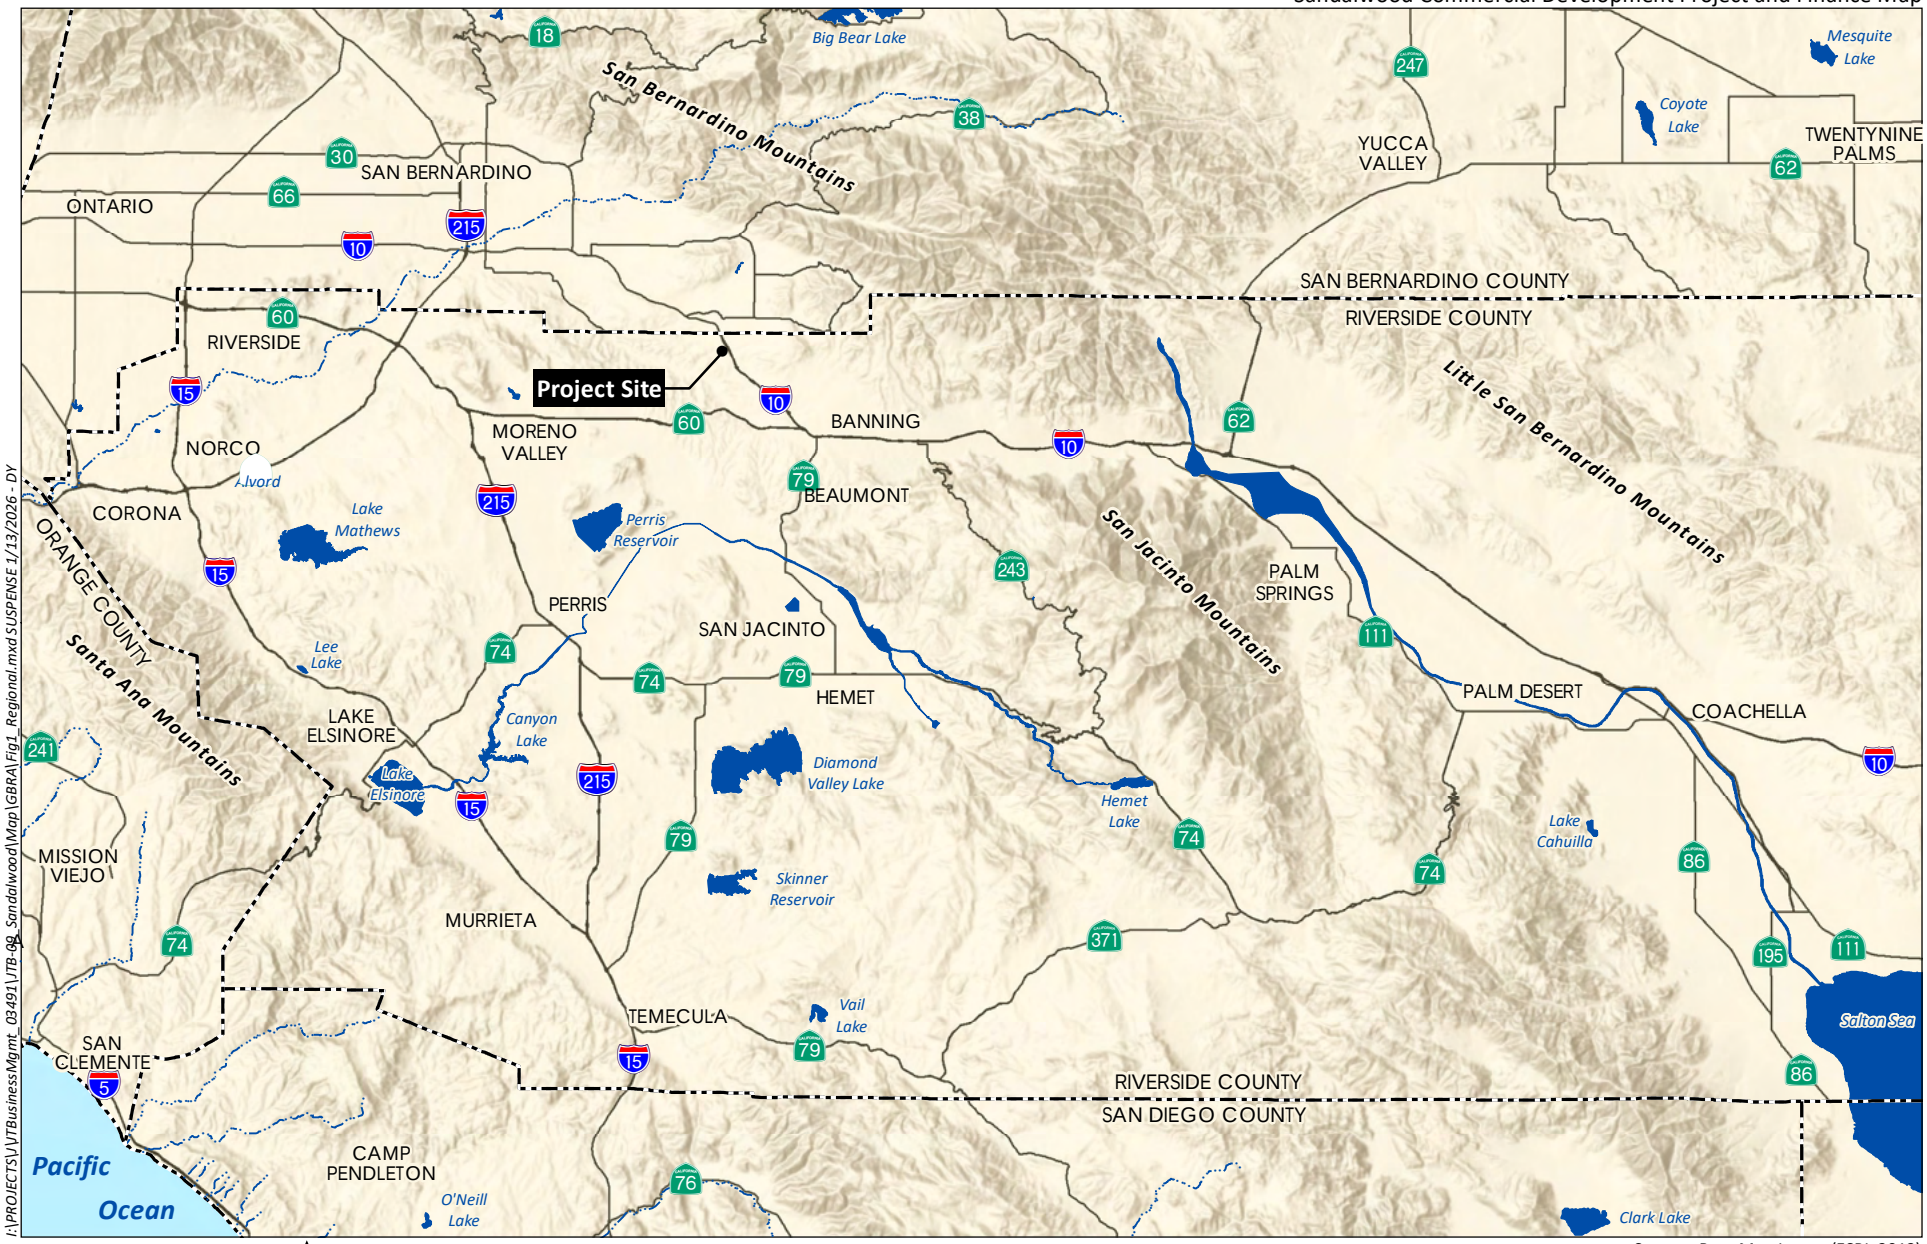
The project site is generally located west of Interstate (I) 10 and north of Sandalwood Drive (Figure 1, *Regional Location*). The project site is within Section 14 of Township 2 South, Range 2 West on the U.S. Geological Survey (USGS) 7.5-minute El Casco quadrangle (Figure 2, *USGS Topography*). The project site is bordered by 7th Street to the west and I-10 to the east (Figure 3, *Aerial Photograph*). It is located approximately 400 feet north of the intersection of 7th Street and Sandalwood Drive.

1.3 PROPOSED PROJECT

The project consists of a proposed subdivision of APN 411-210-024, which would be subdivided into three separate parcels (proposed Parcels 1 through 3; Figure 4, *Proposed Parcel Map*). Proposed Parcel 1 (3.0 acres) would include the northern portion of APN 411-210-024 in addition to APN -006. Proposed Parcel 2 (2.7 acres) and Parcel 3 (3.6 acres) encompass the central and southern portions of APN 411-210-024, respectively. No reasonably foreseeable future development is planned within the northern Parcel 1 or Parcel 2, which are collectively referred to in this report as the Northern Parcels. The project site also includes an additional 1.9-acre off-site right-of-way, for a total 11.2-acre project site.

A commercial development (Sandalwood Commercial Development) is proposed within the southern proposed Parcel 3 and off-site improvements. The approximately 4.5-acre (3.8 acres on-site, 0.7 acre off-site) proposed commercial development includes minor grading and construction of a truck stop. The truck stop would include four multi-product dispensers, a convenience store with a drive-thru, a five-position diesel canopy, 44 standard parking stalls, three accessible parking stalls, 19 semi-truck/trailer parking stalls, and half-width road improvements within 7th Street (Figure 5, *Sandalwood Site Plan*). Off-site improvements include permanent impacts adjacent to the western project boundary to complete road improvements within 7th Street and install a v-ditch and temporary impacts along the

northern and western project boundaries to account for over-excavation during grading. Temporary impacts for over-excavation during grading total 0.4 acre (0.1 acre on-site and 0.3 acre off-site). No development is proposed on the Northern Parcels, although the southern portion of Parcel 2 (0.1 acre) will be temporarily impacted by over-excavation during construction of the Sandalwood Commercial Development. The Northern Parcels are subject to the entitlement approval (referred to as a Finance Map).



1.4 SITE HISTORY

A Mitigated Negative Declaration (MND) for *Rough Grading Permit for a 10-acre Parcel Located North of Sandalwood Drive on 7th Street* was adopted by the City in July 2007 (State Clearinghouse 2007031152). The MND evaluated the same on-site project site (i.e., APNs 411-210-006 and -024) assessed in this report. The prior project consisted of rough grading the on-site project site and implementing drainage improvements, which included the installation of subsurface storm drain infrastructure. The grading and drainage improvements required impacts to jurisdictional streambeds. Regulatory permits obtained for the drainage improvement project included a Section 404 Nationwide Permit issued by the U.S. Army Corps of Engineers (USACE) on January 30, 2008 (No. 2007-973-FBV) and Section 1602 approval by Operation of Law from the California Department of Fish and Wildlife (CDFW) on November 28, 2007 (Notification No. 1600-2007-0140-R6). On November 8, 2007, the Regional Water Quality Control Board (RWQCB) determined no action would be taken on the request for a Section 401 Water Quality Certification, and the USACE subsequently issued a waiver. The on-site project site was graded in 2009 as part of prior entitlements, and no other construction has occurred within the project site since 2009.

Because the prior project received Section 1602 approval from CDFW by Operation of Law, mitigation requirements for impacts to CDFW jurisdiction were likely described in the Notification of Lake or Streambed Alteration (LSA). The project proponent involved with the prior project and associated approvals is deceased, and the current landowner and CDFW are unable to locate the LSA to verify the required mitigation for the prior project and whether any mitigation was ever implemented. No mitigation was required by USACE in the Section 404 Nationwide Permit, and RWQCB determined no action would be taken in the Section 401 Water Quality Certification.

The project is located within the MSHCP Criteria Area; therefore, the prior project was also required to be assessed through the Habitat Acquisition and Negotiation Strategy (HANS) process and undergo a Joint Project Review (JPR) process with the RCA and the Wildlife Agencies to verify the project's consistency with MSHCP Reserve Assembly goals and other applicable MSHCP policies. Although a HANS application was prepared by ECORP Consulting, Inc. in August 2007, the landowner is unable to locate documentation that the HANS process or JPR was completed. The prior project also impacted drainages that met the definition of MSHCP Riparian/Riverine Areas; therefore, a Determination of Biologically Equivalent or Superior Preservation (DBESP) and appropriate mitigation would also have been required. Similar to JPR documentation, a DBESP also cannot be located by the landowner, Regional Conservation Authority (RCA), or the Wildlife Agencies (i.e., CDFW and U.S. Fish and Wildlife Service [USFWS]).

Given that mitigation requirements and implementation cannot be verified, the current Project Proponent has been coordinating with the landowner, Wildlife Agencies, and Rivers and Lands Conservancy, and has identified a mitigation approach to compensate for the prior project impacts to CDFW jurisdiction and MSHCP Riparian/Riverine Areas. An after-the-fact DBESP was also prepared to demonstrate that the proposed mitigation provides equivalent or superior preservation for prior impacts that occurred on the project site (Appendix A, *Draft DBESP*). A HANS application was submitted

HELIX Environmental Planning

Sandalwood Site Plan

Figure 5

to the City in August 2022, and a JPR application was submitted to the RCA in September 2022, which assesses the entire project site and evaluates both the project impacts that occurred in 2009 and the impacts that are proposed by the current project. The Project Proponent is working to respond to JPR comments from RCA, which includes submitting an after-the-fact DBESP. After RCA issues its consistency findings, the Wildlife Agencies will perform their own joint review and provide their comments or concurrence with RCA's findings. Under the City's direction, JPR processing, including RCA and Wildlife Agencies approval of the DBESP, will be completed before the Final MND for the currently proposed project is prepared.

The focus of this report is to evaluate project impacts associated with the proposed Sandalwood Commercial Development Project and Finance Map, given that the prior project (Rough Grading Permit for a 10-acre Parcel Located North of Sandalwood Drive on 7th Street) impacts were evaluated in a previous MND that was adopted by the City in July 2007.

2.0 METHODS

The project evaluation included the following: a review of project plans; a literature review of biological resources occurring in the project site and surrounding vicinity; a general biological survey, including vegetation mapping and a general habitat assessment; Step I and Step II burrowing owl (*Athene cunicularia*; BUOW) surveys; a Crotch's bumble bee (*Bombus crotchii*; CBB) habitat assessment; a jurisdictional assessment; and an MSHCP Riparian/Riverine and Vernal Pool Resources assessment. The methods used to evaluate the biological resources present in the project site are discussed in this Methods section.

2.1 NOMENCLATURE

Nomenclature for this report follows Baldwin et al. (2012) for plants and the MSHCP (County 2003) for vegetation community classifications, with additional vegetation community information taken from Manual of California Vegetation, Second Edition (MCV; Sawyer et al. 2009) and Oberbauer (2008). Animal nomenclature follows Emmel and Emmel (1973) for butterflies, Center for North American Herpetology (Taggart 2016) for reptiles and amphibians, American Ornithologists' Society (2024) for birds, and Baker et al. (2003) for mammals. Rare plant and sensitive animal statuses are from the California Native Plant Society's (CNPS) Inventory of Rare and Endangered Plants of California (2024) and CDFW's California Natural Diversity Database (CNDDB; CDFW 2024). Rare plant species habitats and flowering periods are from the Jepson Manual (Baldwin et al. 2012), MSHCP (County 2003), CNPS (2024), and CNDDB (CDFW 2024). Soil classifications were obtained from the Natural Resources Conservation Service's (NRCS) Web Soil Survey (2024).

2.2 LITERATURE REVIEW

HELIX Environmental Planning, Inc. (HELIX) reviewed Google Earth aerials (2022), Web Soil Survey (NRCS 2024), and sensitive species database records, including the Inventory of Rare and Endangered Plants of California (CNPS 2024), CNDDB (CDFW 2024), and USFWS critical habitat maps (2024a). A two-quadrangle database search was conducted on CNDDB and CNPS, which included the following quadrangles: El Casco and Yucaipa. In addition, the MSHCP (County 2003) and the RCA MSHCP Information Tool (RCA 2024) were consulted to determine project consistency with the MSHCP.

2.3 FIELD SURVEYS

Field surveys were conducted to document the existing condition of the project site and surrounding lands. The general biological survey included vegetation mapping, during which dominant plant species were noted. Step I and Step II BUOW surveys were conducted. A CBB habitat assessment was also conducted. A jurisdictional assessment was conducted to determine if resources were present under the jurisdiction of the USACE, RWQCB, and/or CDFW. A habitat assessment was also conducted in the project site to determine habitat suitability for rare plant and animal species, in addition to MSHCP Riparian/Riverine and Vernal Pool Species.

The lists of plant and animal species observed and/or detected during the field surveys are provided in Appendix B, *Plant Species Observed*, and Appendix C, *Animal Species Observed and/or Detected*. Animal species recorded were identified by direct observation, vocalizations, or the observance of scat, tracks, or other signs. However, the list of animal species identified is not necessarily a comprehensive account of all species that use the project site, as species that are nocturnal, secretive, or seasonally restricted may not have been observed.

2.3.1 General Biological Survey

A general biological survey of the project site was conducted by HELIX Biologist and Senior Regulatory Specialist Ezekiel Cooley on November 6, 2020, and Biologist Lauren Singleton on December 21, 2020. An updated general biological survey of the entire project site was conducted by Ms. Singleton and HELIX Biologists Jessica Lee and Cache Tucker on April 22, 2022. Existing conditions were also reverified during the 2024 BUOW and CBB surveys (refer to Section 2.3.2 below). Vegetation was mapped on a 125-foot (1 inch = 125 feet) aerial photograph of the project site and in accordance with vegetation community classification described in Section 2.1.3 of the MSHCP (County 2003) and with additional information from MCV (Sawyer et al. 2009) and Oberbauer (2008). Vegetation communities and land uses were mapped by HELIX to one-tenth of an acre (0.1 acre). The entire project site was surveyed on foot with the aid of binoculars. Representative photographs of the project site were taken, with select photographs included in this report in Appendix D, *Site Photographs*. Plant and animal species observed or otherwise detected were recorded in field notebooks. Animal identifications were made in the field by direct, visual observation or indirectly by detection of calls, burrows, tracks, or scat. Plant identifications were made in the field or in the lab through comparison with voucher specimens or photographs.

2.3.2 Focused Species Surveys

2.3.2.1 Burrowing Owl

The project site is within an MSHCP BUOW Survey Area. In accordance with the County's survey protocol, a Step I habitat assessment was conducted in the project site and within a 150-meter (approximately 500-foot) buffer zone around the periphery of the project site (survey area; RCA 2006). Mr. Tucker completed a Step I habitat assessment on July 24, 2024, during which potential suitable BUOW habitat was observed.

Step II surveys, which consist of a focused burrow survey (Part A) and focused BUOW surveys (Part B), were conducted to determine whether the survey area supports suitable burrows, burrow surrogates, and/or owls. The focused burrow survey and first focused BUOW survey visit were conducted

concurrently with the habitat assessment. Because one suitable burrow and one burrow surrogate were observed within the survey area, three additional focused BUOW surveys (for a total of four surveys) were conducted. The focused burrow survey and four BUOW surveys were conducted by Mr. Tucker and HELIX Biologist Nelly Moreno between July 24 and August 7, 2024. The biologists walked transects spaced no greater than 30 meters apart (approximately 100 feet) to allow for 100 percent visual coverage of all suitable habitat within the survey area. The biologists walked slowly and methodically, closely checking habitat for suitable burrows, burrow surrogates, BUOW diagnostic sign (e.g., molted feathers, pellets/castings, or whitewash at or near a burrow entrance), and individual BUOWs. Inaccessible areas of the survey area were visually assessed using binoculars. The BUOW survey findings are in Appendix E, *2024 BUOW Focused Survey Report.*

2.3.2.2 Crotch's Bumble Bee

Mr. Tucker performed a CBB habitat assessment on July 13, 2024, to determine if suitable habitat is present within the project site. In accordance with the *CDFW Survey Considerations for CESA Candidate Bumble Bee Species* (CDFW 2023a), the biologist mapped habitat alliances within the project site. The habitat alliances were classified following the *Manual of California Vegetation* (Sawyer et al. 2009). The biologist recorded the estimated absolute percent cover for individual species for each habitat alliance. In addition to foraging resources, potential nesting habitat (e.g., small mammal burrows, loose soil, bunch grasses, thatch, brush piles, old bird nests, and dead trees) were noted if observed during the assessment. The CBB habitat assessment findings are detailed in Appendix F, *CBB Habitat Assessment Report*.

2.3.3 Jurisdictional Assessment

Prior to beginning fieldwork, HELIX reviewed aerial photographs (1 inch = 125 feet), topographic maps (1 inch = 125 feet), USGS quadrangle maps, and National Wetlands Inventory maps (USFWS 2024b) to assist in determining the location of potential jurisdictional waters in the project site. Principal Regulatory Specialist Amir Morales conducted a jurisdictional assessment of the project site on May 12, 2021. Ms. Singleton conducted a jurisdictional assessment of the entire project site on April 22, 2022. The assessments were conducted to identify jurisdictional waters potentially subject to USACE jurisdiction pursuant to Section 404 of the Clean Water Act (CWA); RWQCB jurisdiction pursuant to Section 401 of the CWA and/or State Porter-Cologne Water Quality Control Act; and streambed habitats potentially subject to CDFW jurisdiction pursuant to Sections 1600 *et seq.* of the California Fish and Game Code (FGC). Data collection was targeted in areas deemed to have the potential to support jurisdictional resources, such as the presence of an ordinary high water mark (OHWM), the presence of a bed/bank and streambed associated vegetation, and/or other surface indications of streambed hydrology.

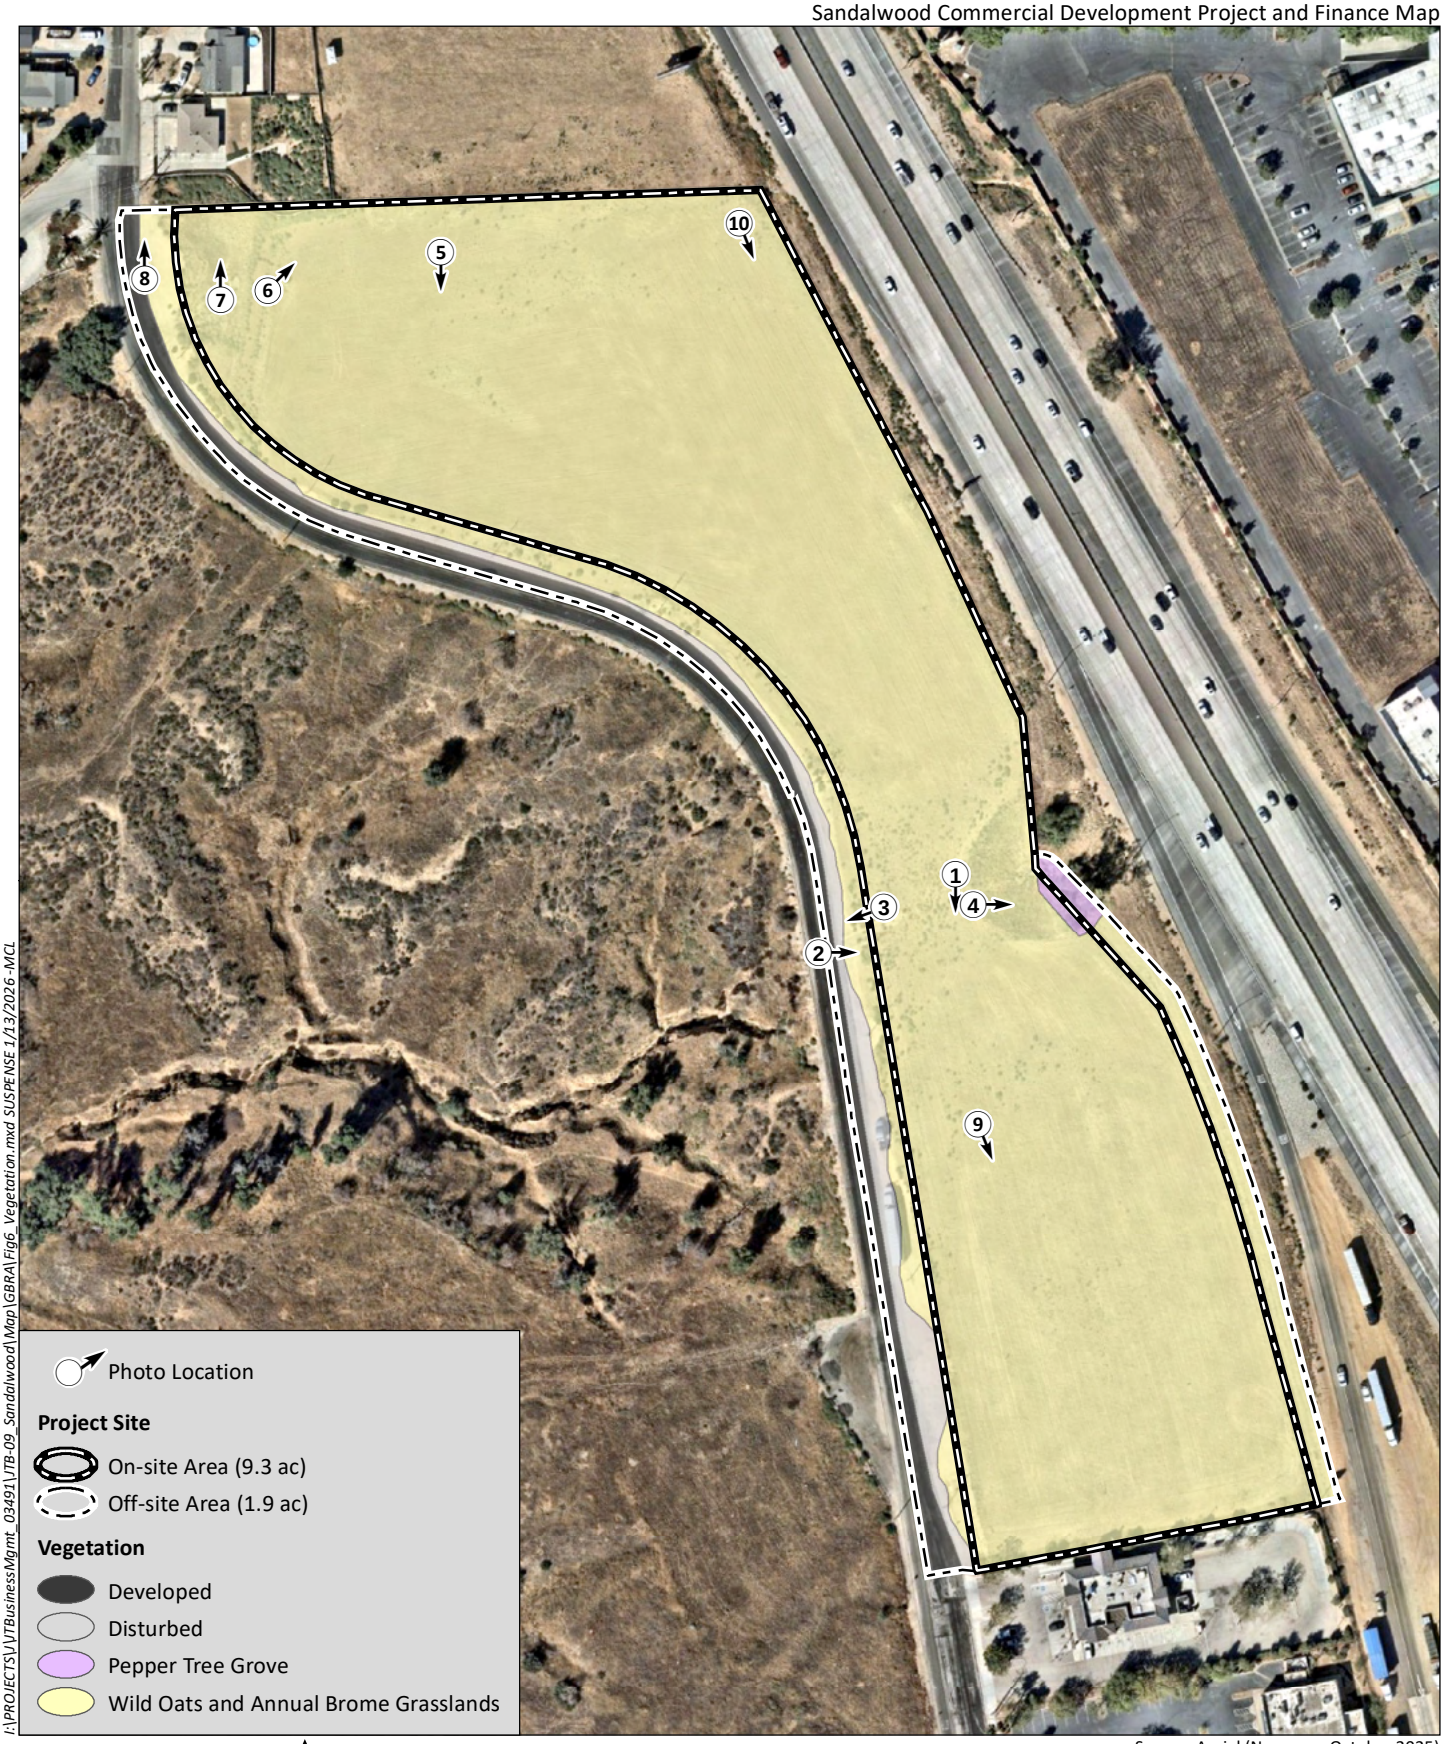
3.0 RESULTS

3.1 ENVIRONMENTAL SETTING

The project site has been used for agriculture since at least 1938 (Historic Aerials 2024) and was graded in 2009 for the purpose of implementing drainage improvements to support potential future development of the site. The project site is dominated by wild oats and annual brome grasslands, and the site appears to be mowed or disced on a regular basis. Non-native grasses in the project site

appeared to have been recently mowed before the November/December 2020 general biological survey, but were fully regrown during the April 2022 general biological survey. A small area of ornamental trees was noted along the eastern project site boundary, which consists of Peruvian pepper trees (*Schinus molle*). The western boundary of the project site consists of a paved ROW associated with 7th Street. Conditions documented in 2022 were consistent with those observed in 2024. The topography of the project site is mostly flat, with elevations ranging from approximately 2,380 feet (725 meters) above mean sea level (AMSL) near the northwestern corner of the project site to approximately 2,400 feet (732 meters) AMSL near the southeastern corner. Immediate surrounding land uses consist of commercial, industrial, and residential development to the north, south, and east, undeveloped land to the west, and I-10 directly adjacent to the eastern project site boundary.

The soils mapped in the project site include Ramona very fine sandy loam (0 to 8 percent slopes) and San Timoteo loam (25 to 50 percent slopes; NRCS 2024). The Ramona soil series consists of well-drained alluvium derived from granite. The San Timoteo soil series consists of well-drained marine deposits derived from mixed sources and/or residuum weathered from sandstone.



3.2 VEGETATION COMMUNITIES

Four vegetation communities/land uses were mapped in the project site, including wild oats and annual brome grasslands, developed, disturbed, and pepper tree grove (Table 1, *Vegetation and Land Uses*; Figure 6, *Vegetation and Land Uses*). The CDFW CaCodes and Oberbauer Element Codes are provided in parentheses next to each community name in Table 1. A brief description of each vegetation community and land uses mapped in the project site is provided below. Representative photos of the project site are provided as Appendix D, *Representative Site Photographs*.

Table 1
VEGETATION AND LAND USES

MSHCP Community Classification[1]		Manual of California Vegetation/Oberbauer	Project Site (Acres)[2]	
Collapsed	**Uncollapsed**		**On-site Area**	**Off-site Area**
Grassland	Non-native Grassland	Wild Oats and Annual Brome Grasslands (CaCode[3] 44.150.02)	9.2	1.0
Developed/ Disturbed Land	Developed (Residential)	Developed (O[4] 11300)	0.0	0.5
	Disturbed (Residential)	Disturbed (O 11300)	<0.1[5]	0.4
	Ornamental (Exotic)	Pepper Tree Grove (CaCode 79.200.00)	0.1	<0.1[6]
		TOTAL	**9.3**	**1.9**

HELIX Environmental Planning

Vegetation and Land Uses

Figure 6

3.2.1 Wild Oats and Annual Brome Grassland

Wild oats and annual brome grassland (non-native grassland under the MSHCP Community Classification) is a dense to sparse cover of annual grasses, often associated with numerous species of showy-flowered native annual forbs. Characteristic species include oats (*Avena* spp.), brome grasses (*Bromus* spp.), and mustards (*Brassica* spp., short-pod mustard [*Hirschfeldia incana*]). Most annual species within the non-native grassland originated from the Mediterranean region, an area with a long history of agriculture and a climate similar to California. Intensive grazing and agricultural practices combined with severe droughts in California contributed to the successful invasion and establishment of these species and the replacement of native grasslands with annual-dominated non-native grasslands (Jackson 1985).

Wild oats and annual brome grassland dominate the project site, with 9.2 acres within the on-site area and 1.0 acre within the off-site area. Annual grasses on the project site appear to be regularly mowed or disced throughout the year to reduce fuel load (i.e., fire risk). This plant community is dominated by slender oat (*Avena barbata*). Other non-native grass species observed include red brome (*Bromus rubens*) and common ripgut grass (*Bromus diandrus*), as well as other non-native annuals such as Russian thistle (*Salsola tragus*) and short-pod mustard. A small Gooding's black willow (*Salix gooddingii*) was observed at the very southern end of the project site, near the existing commercial development south of the project site. The individual willow is not associated with any streambed or other aquatic features.

3.2.2 Developed

Developed land is included under the Urban/Residential/Exotic classification in the MSHCP. This land use includes areas where permanent structures and/or pavement have been placed that prevent the growth of vegetation or where landscaping is clearly tended and maintained.

Developed land was observed along the western project site boundary, which comprises 0.5 acre within the off-site area. This area consists of an existing paved ROW associated with 7th Street.

3.2.3 Disturbed

Disturbed land is included under the Urban/Residential/Exotic classification in the MSHCP. This land use includes land containing a preponderance of non-native plant species, such as ornamentals or ruderal exotic species that take advantage of disturbance (previously cleared or abandoned landscaping), or land showing signs of past or present animal usage that removes any capability of providing viable habitat.

Disturbed areas were observed along the western project site boundary, with less than 0.1 acre occurring within the on-site area and 0.4 acre within the off-site area. Disturbed areas consist of an unvegetated road shoulder adjacent to 7th Street.

3.2.4 Pepper Tree Grove

Pepper tree grove (Residential/Urban/Exotic under the MSHCP Community Classification) is characterized as stands of pepper trees (*Schinus* spp.), which are usually associated with landscaping.

Pepper tree grove was observed as a small patch along the eastern project site boundary, with 0.1 acre occurring within the on-site area and less than 0.1 acre within the off-site area. This community consists of two mature trees on the project site.

3.3 PLANTS

HELIX identified a total of 38 plant species in the project site during the surveys to date, of which 24 (63 percent) are non-native species (Appendix B). The predominance of non-native species is indicative of the high degree of disturbance as a result of historical and current use of the site.

3.4 ANIMALS

Based on the limited habitat, only 26 bird species were detected in the project site during the surveys (Appendix C). Other common species that were not detected, but likely use the project site, include coyote (*Canis latrans*), desert cottontail (*Sylvilagus audubonii*), raccoon (*Procyon lotor*), and western fence lizard (*Sceloporus occidentalis*).

3.5 SENSITIVE BIOLOGICAL RESOURCES

3.5.1 Rare Plant Species

Rare plant species are uncommon or limited in that they: (1) are only found in the western Riverside County region; (2) are a local representative of a species or association of species not otherwise found in the region; or (3) are severely depleted within their ranges or within the region. Rare plant species include those species listed by CNPS with a California Rare Plant Rank of 1, 2, or 3 (CNPS 2024), federally and State listed endangered and threatened species, or those species that require additional surveys by the MSHCP (County 2003).

Nineteen rare plant species were recorded within the El Casco and Yucaipa quadrangles based on a database search conducted on CNDDB (CDFW 2024) and CNPS (2024). These species are included in Appendix G, *Rare Plant Species Potential to Occur.* None of the 20 rare plant species recorded within the vicinity of the project site has a potential to occur based on geographic range, elevation range, and/or lack of suitable habitat in the project site. The project site is also located within an MSHCP Narrow Endemic Plant Species Survey Area (NEPSSA), which is discussed further in Section 3.6.3 below.

3.5.2 Sensitive Animal Species

Sensitive animal species include federally and State listed endangered and threatened, candidate species for listing by USFWS or CDFW, and/or are species of special concern (SSC) pursuant to CDFW.

Twenty-eight sensitive animal species were recorded within the El Casco and Yucaipa quadrangles based on a database search conducted on CNDDB (CDFW 2024). These species are included in Appendix H, *Sensitive Animal Species Potential to Occur*, which includes an evaluation of each sensitive animal species' potential to occur in the project site. Of the 28 sensitive animal species recorded within the vicinity of the project site, 23 species were considered to have no potential to occur due to the lack of suitable habitat and lack of recent observations within the immediate vicinity of the project site. A habitat assessment was performed for CBB, which is discussed in Section 3.5.2.2 below.

Five species were determined to have a low potential to occur in the project site based on the presence of low-quality habitat, limited acreage of habitat, and lack of recent observations within the immediate vicinity of the project site. These species include BUOW, Los Angeles pocket mouse (*Perognathus longimembris brevinasus*), loggerhead shrike (*Lanius ludovicianus*), Swainson's hawk (*Buteo swainsoni*; foraging potential only), and white-tailed kite (*Elanus leucurus*). Los Angeles pocket mouse and loggerhead shrike are SSC. BUOW is a State candidate threatened species, Swainson's hawk is a State threatened species, and white-tailed kite is a State fully protected species. These five species are either adequately or not adequately conserved species under the MSHCP.

BUOW and CBB are discussed further below.

3.5.2.1 Burrowing Owl

Focused surveys for BUOW were conducted in accordance with the appropriate survey protocol (RCA 2006), as previously described in Section 2.3.2.1 above. No owls or other sign were observed within the survey area. Therefore, the project site does not support BUOWs. The survey results are discussed in detail in a separate letter report, which is provided in Appendix E.

3.5.2.2 Crotch's Bumble Bee

Based on the limited quantity and diversity of nectar resources in the project site, a lack of known occurrences within adjacent areas, and limited potential nesting habitat, the project site does not contain habitat suitable to support CBB; therefore, focused surveys were not required. The assessment results are discussed in detail in a separate letter report, which is provided in Appendix F.

3.5.3 Sensitive Vegetation Communities/Habitats

Sensitive vegetation communities/habitats are considered either rare within the region or sensitive by CDFW (2023b). Communities are given a Global and State (S) ranking on a scale of 1 to 5. Communities afforded a rank of 5 are most common, while communities with a rank of 1 are considered highly periled. CDFW considers sensitive communities as those with a rank between S1 and S3.

The project site does not support sensitive vegetation communities.

3.5.4 Jurisdictional Waters

Based on prior fieldwork (ECORP 2007), the project site originally supported three jurisdictional features, which the 2007 Biological Report refers to as "Stream," "Drainage 1," and "Drainage 2". These areas totaled 1.12 acres and were filled and replaced with a sub-surface storm drain system in 2009.

A jurisdictional assessment was conducted by Mr. Morales on May 12, 2021, on the project site and by Ms. Singleton on April 22, 2022, on the Northern Parcels. Existing conditions were also reverified during the 2024 BUOW and CBB surveys. No jurisdictional waters regulated by the USACE, RWQCB, or CDFW occur within the project site boundary. Storm drain inlets are in the northern and central portions of the project site, which function to accept sheet flow from 7th Street. Seventh Street is a paved road and bounds the project site to the west. No jurisdictional indicators were observed associated with these inlets. Photographs of the existing storm drain inlets in the project site are provided in Appendix D.

Based on the results of the jurisdictional assessment, no jurisdictional features were observed within the project site. Streambed field indicators were not present within the project site, such as the presence of an OHWM, defined bed and/or bank, or streambed associated riparian vegetation. Therefore, the project site does not currently support waters of the U.S. subject to USACE jurisdiction or waters of the State subject to RWQCB and CDFW jurisdiction.

MSHCP Riparian/Riverine Areas are addressed in Section 3.6.2 below.

3.5.5 Habitat and Wildlife Corridor Evaluation

Wildlife corridors connect otherwise isolated pieces of habitat and allow the movement or dispersal of plants and animals. Corridors can be local or regional in scale; their functions may vary temporally and spatially based on conditions and species presence. Local wildlife corridors allow access to resources such as food, water, and shelter within the framework of their daily routine. Animals use these corridors, which are often hillsides or tributary drainages, to move between different habitats. Regional corridors provide these functions over a larger scale and link two or more large habitat areas, allowing the dispersal of organisms and the consequent mixing of genes between populations.

The project site does not directly connect to large blocks of habitat. Although the western portion of the project site is adjacent to undeveloped land, the project site is constrained by a commercial development to the south, I-10 to the east, and commercial and residential land to the north. There are no culvert crossings within or adjacent to the project site that would allow animals to move across the I-10 from the project site. The project site consists mostly of undeveloped land dominated by disturbed habitat with sparse vegetation. Because the project site does not connect two or more large habitat areas, the project site is not considered a wildlife movement corridor.

The project site is not located within any MSHCP Linkages, which are areas within the Plan Area identified as having the potential to facilitate wildlife movement (County 2003). The nearest linkage to the project site is Proposed Constrained Linkage (PCL-) 23, which is approximately 0.25 mile to the south of the project site. The project site does not directly connect to PCL-23, which is separated by Sandalwood Drive and an existing commercial development.

The project site is disturbed from historical and surrounding human activities and supports minimal vegetative cover. Although the project site does not function as a wildlife corridor, it does support some trees and herbaceous ground cover that may provide limited opportunities for local wildlife movement. Smaller mammals and reptiles that are adapted to human disturbance (e.g., California ground squirrel [*Otospermophilus beecheyi*], desert cottontail rabbits, western fence lizard) may use the project site for foraging and/or cover, while bird species may fly over existing development to access the project site for foraging and/or nesting. Some wildlife may use the project site for cover and/or foraging. Therefore, the project site may support some low-quality habitat for wildlife, but the project site does not function as a wildlife movement corridor because it does not connect two or more large blocks of habitat.

3.6 WESTERN RIVERSIDE COUNTY MSHCP CONSISTENCY ANALYSIS

3.6.1 Habitat Evaluation and Acquisition Negotiation Strategy (Section 6.1.1)

The MSHCP Plan Area is divided into 16 Area Plans, in which 153,000 acres were identified as potential areas for conservation that would contribute to the overall existing MSHCP Conservation Area. The

areas described for conservation within the MSHCP Plan Area fall within the Criteria Area, further divided into Cells and Cell Groups, which provide the foundation of Core Areas that support habitat for covered species and Linkages that provide a connection between Core Areas. Each Cell and Cell Group is subject to specific conservation goals and objectives. All projects within the Criteria Area are required to be assessed through the HANS process to determine the acreage amount of conservation required. The HANS process aids in the acquisition of conservation lands that will contribute to the assembly of the MSHCP Reserve. The HANS process is followed by the JPR process.

The project site is located within Subunit 2 (Badlands/San Bernardino National Forest) in the north-central portion of the Pass Area Plan. The northern, northeastern, and western portions of the project site fall within the northeastern corner of Cell 323, and the southern and southeastern portions of the project site fall within the northwest-central portion of Cell 326 (Figure 7, *MSHCP Context*). The criteria for Cells 323 and 326 are summarized below in Table 2, *MSHCP Cell Criteria*. Conservation within Cells 323 and 326 focuses on upland habitats within the southern portion of the Cells, associated with Proposed Constrained Linkage 23. The project site is located in the northernmost portion of Cell 323 and the northwest-central portion of Cell 326, outside of the area described for conservation in the southern portion of these Cells.

As discussed in Section 1.4 above, a HANS application was submitted to the City in August 2022, and a JPR application was submitted to the RCA in September 2022. The JPR process is ongoing with the RCA. The Project Proponent is working to respond to JPR comments from RCA, which includes submitting an after-the-fact DBESP. After RCA issues its consistency findings, the Wildlife Agencies will perform their own joint review and either provide additional comments or their concurrence with the RCA findings. Under the City's direction, the JPR process, including RCA and Wildlife Agencies' approval of the DBESP, will be completed before the Final MND is prepared. Because the project site does not encompass areas targeted for conservation, the project will not conflict with the conservation goals for Cells 323 and 326.

Table 2
MSHCP CELL CRITERIA

Cell Number	Cell Conservation Criteria
323	Conservation within this Cell will contribute to the assembly of Proposed Constrained Linkage 23. Conservation within this Cell will focus on chaparral and grassland. Areas conserved within this Cell will be connected to chaparral and grassland habitat proposed for conservation to the south, east, and west in Cells 417, 326, and 311. Conservation within this Cell will range from 5% to 15%, focusing on the southern portion of the Cell.
326	Conservation within this Cell will contribute to the assembly of Proposed Constrained Linkage 23. Conservation within this Cell will focus on coastal sage scrub, chaparral, and grassland. Areas conserved within this Cell will be connected to uplands proposed for conservation in Cells 411 and 323. Conservation within this Cell will range from 5%, focusing on the southern portion of the Cell.

Source: County (2003)

3.6.2 Riparian/Riverine and Vernal Pool Habitat Assessment (MSHCP Section 1.2)

The identification of MSHCP Riparian/Riverine resources is based on the potential for the habitat to support, or be a tributary to habitat that supports, Riparian/Riverine Covered Species. Riparian/Riverine Covered Species are identified in MSHCP Section 6.1.2. The MSHCP defines Riparian/Riverine habitat as

"lands which contain Habitat dominated by trees, shrubs, or emergent mosses and lichens, which occur close to or which depend upon soil moisture from a nearby fresh water source; or areas with fresh water flow during all or a portion of the year" (County 2003). The MSHCP defines Vernal Pools as "seasonal wetlands that occur in depression areas that have wetlands indicators of all three parameters (soils, vegetation and hydrology) during the wetter portion of the growing season but normally lack wetlands indicators of hydrology and/or vegetation during the drier portion of the growing season" (County 2003). Artificially created features, except for those created intentionally to provide wetland habitat, or resulting from the creation of open waters, or alteration of natural stream courses, are not considered MSHCP Riparian/Riverine Areas or Vernal Pools.

Based on prior fieldwork (ECORP 2007), the project site originally supported three Riparian/Riverine Areas, specifically one stream in the northern portion of the project site (Stream) and two drainages (Drainages 1 and 2) in the center of the site. These areas totaled 1.12 acres and were filled and replaced with a sub-surface storm drain system in 2009.

In accordance with the MSHCP, a Riparian/Riverine and Vernal Pool habitat assessment was conducted for the project site by Mr. Morales on May 12, 2021, and for the entire project site by Ms. Singleton on April 22, 2022. The Riparian/Riverine and Vernal Pool habitat assessment was conducted concurrently with the jurisdictional assessment. Existing conditions were also reverified during the 2024 BUOW and CBB surveys. No Riparian/Riverine Areas or Vernal Pools were observed within the project site boundary. Storm drain inlets are in the northern and central portions of the project site, which function to accept sheet flow from 7th Street. Seventh Street is a paved road that bounds the project site to the west. Riparian/Riverine Areas or Vernal Pools were not observed associated with these inlets. No depressional areas capable of supporting fairy shrimp species were observed within the project site. As a result, the project site does not currently support Riparian/Riverine Areas or Vernal Pools or suitable habitat for associated species, as defined by MSHCP. Photographs of the existing storm drain inlets observed within the project site are provided in Appendix D.

3.6.3 Narrow Endemic Plant Species Survey Area (MSHCP Section 6.1.3)

There are 14 narrow endemic plant species that are associated with 10 different NEPSSAs located throughout the MSHCP Plan Area (refer to Table 6-1 in the MSHCP). The MSHCP requires a habitat assessment to be conducted for projects located within a NEPSSA to determine whether a project site supports suitable habitat for the associated narrow endemic plant species. Focused surveys for species listed for the NEPSSA must be conducted if suitable habitat is present. If focused surveys are positive, 90 percent of the property that supports habitat suitable for long-term conservation of the species must be avoided until conservation goals for the species are satisfied.

The project site is located within NEPSSA 8, which requires a habitat assessment for Yucaipa onion (*Allium marvinii*) and many-stemmed dudleya (*Dudleya multicaulis*). These species are generally associated with clay soils within upland habitats. Many-stemmed dudleya can also occur on sandstone outcrops. The project site does not support suitable clay soil or sandstone outcrops. The project site mostly supports loamy and sandy soil types. The project site is also located below the elevation range of Yucaipa onion. Because the project site does not support suitable habitat for either species, focused surveys for narrow endemic plant species were not warranted, and no further action regarding these species is required.

HELIX Environmental Planning

MSHCP Context

Figure 7

3.6.4 Additional Survey Needs and Procedures (MSHCP Section 6.3.2)

For species listed under MSHCP Section 6.3.2, if a project site is located within one of the designated survey areas and suitable habitat is present on the project site, focused surveys are required. If focused surveys are positive for conditionally covered species, 90 percent of the property that supports habitat suitable for long-term conservation of the species must be avoided until conservation goals for the species have been satisfied. Additional survey requirements are discussed in detail below.

3.6.4.1 Criteria Area Plant Species

An assessment of suitable habitat for rare plant species must be conducted for projects located within a Criteria Area Species Survey Area (CASSA). If suitable habitat is present, focused surveys for species listed for the CASSA should be conducted.

The project site is not located within a CASSA; therefore, a habitat assessment for criteria area plant species was not warranted, and no further action regarding criteria area plant species is required.

3.6.4.2 Amphibian Species

An assessment of suitable habitat for arroyo toad (*Bufo californicus*), California red-legged frog (*Rana draytonii*), and mountain yellow-legged frog (*Rana muscosa*) must be conducted for projects located within an Amphibian Species Survey Area.

The project site is not within the Amphibian Species Survey Area; therefore, a habitat assessment for amphibians was not warranted, and no further action regarding amphibians is required.

3.6.4.3 Burrowing Owl

The project site is located within a BUOW Survey Area. Therefore, a Step I assessment for BUOW suitable habitat was required in accordance with the appropriate survey protocol (RCA 2006). Because suitable habitat was observed, a Step II-A focused burrow survey was required, and because one suitable burrow and one burrow surrogate were found, Step II-B focused owl surveys were required. As discussed in Section 3.5.2.1, no owls or other sign were observed during the focused owl surveys.

3.6.4.4 Mammal Species

An assessment of suitable habitat for Aguanga kangaroo rat (*Dipodomys merriami collinus*), San Bernardino kangaroo rat (*Dipodomys merriami parvus*), and Los Angeles pocket mouse must be conducted for projects located within a Mammal Species Survey Area.

The project site is not within the Mammal Species Survey Area; therefore, a habitat assessment for mammals was not warranted, and no further action regarding mammals is required.

4.0 REGIONAL AND REGULATORY CONTEXT

Biological resources located within the project site are subject to regulatory review by federal, State, and local agencies. Biological resources-related laws and regulations that apply to the project include

the Federal Endangered Species Act (FESA), Migratory Bird Treaty Act (MBTA), CWA, California Endangered Species Act (CESA), and FGC.

4.1 FEDERAL REGULATIONS

4.1.1 Federal Endangered Species Act

Administered by the USFWS, the FESA provides the legal framework for the listing and protection of species (and their habitats) identified as being endangered or threatened with extinction. Actions that jeopardize endangered or threatened species and the habitats upon which they rely are considered a "take" under the ESA. Section 9(a) of the ESA defines take as "to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or attempt to engage in any such conduct." "Harm" and "harass" are further defined in federal regulations and case law to include actions that adversely impair or disrupt a listed species' behavioral patterns.

Sections 4(d), 7, and 10(a) of the FESA regulate actions that could jeopardize endangered or threatened species. Section 7 describes a process of federal interagency consultation for use when federal actions may adversely affect listed species. A biological assessment is required for any major construction activity if it may affect listed species. In this case, take can be authorized via a letter of biological opinion issued by the USFWS for non-marine related listed species issues. A Section 7 consultation is required when there is a nexus between federally listed species' use of the site and impacts to USACE jurisdictional areas. Section 10(a) allows the issuance of permits for "incidental" take of endangered or threatened species. The term "incidental" applies if the taking of a listed species is incidental to, and not the purpose of, an otherwise lawful activity. A Section 10(a) permit for the MSHCP was issued in 2004 and covers Western Riverside County. A project may tier from the existing Section 10(a) permit if the RCA and/or the Wildlife Agencies determined that the project is consistent with the MSHCP.

4.1.2 Federal Clean Water Act, Section 404

Federal wetland regulation (non-marine issues) is guided by the Rivers and Harbors Act of 1899 and the CWA. The Rivers and Harbors Act deals primarily with discharges into navigable waters, while the purpose of the CWA is to restore and maintain the chemical, physical, and biological integrity of all waters of the U.S. Permitting for projects filling waters of the U.S., including wetlands and vernal pools, is overseen by USACE under Section 404 of the CWA. Projects may be permitted on an individual basis or may be covered under one of several approved Nationwide Permits. Individual Permits are assessed individually based on the type of action, amount of fill, etc. Individual Permits typically require substantial time (often longer than six months) to review and approve, while Nationwide Permits are pre-approved if a project meets the appropriate conditions. A CWA Section 401 Water Quality Certification, which is administered by the State Water Resources Control Board, must be issued prior to a 404 Permit. Waste Discharge Requirements must be obtained for impacts to non-federal waters through preparation and submittal of a SWRCB Report of Waste Discharge.

4.1.3 Migratory Bird Treaty Act

Migratory bird species that are native to the United States or its territories are protected under the Federal MBTA, as amended under the Migratory Bird Treaty Reform Act of 2004 (FR Doc. 05-5127). The MBTA is generally protective of migratory birds but does not actually stipulate the type of protection required. In common practice, the MBTA is used to place restrictions on disturbance of active bird nests

during the nesting season, which is generally defined as February 15 through August 31 for songbirds. In addition, the USFWS commonly places restrictions on the disturbances allowed near active raptor nests. The raptor nesting season is generally defined as January 15 through August 31.

4.1.4 Critical Habitat

As described by the FESA, critical habitat is the geographic area occupied by a threatened or endangered species essential to species conservation that may require special management considerations or protection. Critical habitat also may include specific areas not occupied by the species but have been determined to be essential for species conservation. Because the MSHCP factored critical habitat into the MSHCP Reserve when it was being designed, there is no critical habitat within or near the project site.

4.2 STATE REGULATIONS

4.2.1 California Environmental Quality Act

Primary environmental legislation in California is found in CEQA and its implementing guidelines (State CEQA Guidelines), which require that projects with potential adverse effects (i.e., impacts) on the environment undergo environmental review. Adverse environmental impacts are typically mitigated as a result of the environmental review process in accordance with existing laws and regulations.

4.2.2 California Endangered Species Act

The CESA is similar to the FESA in that it contains a process for the listing of species and regulating potential impacts to listed species. The MSHCP is a CDFW-approved Natural Communities Conservation Plan (NCCP) as provided for in the NCCP Act, Fish and Game Code Sections 2800-2835 1. A project may tier from the existing NCCP permit if the RCA and/or the Wildlife Agencies determine that the project is consistent with the MSHCP.

The golden eagle (*Aquila chrysaetos*) and white-tailed kite are considered State fully protected species. Fully protected species may not be taken or possessed at any time, and no State licenses or permits may be issued for their take except for collecting the species necessary for scientific research and relocation of the bird species for the protection of livestock (FGC Sections 3511, 4700, 5050, and 5515).

The Native Plant Protection Act (NPPA) enacted a process by which plants are listed as rare or endangered. The NPPA regulates the collection, transport, and commerce of listed plants. The CESA follows the NPPA and covers both plants and animals determined to be endangered or threatened with extinction. Plants listed as rare under NPPA were designated threatened under the CESA.

4.2.3 Protection of Raptor Species

Raptors (birds of prey) and owls and their active nests are protected by FGC Section 3503.5, which states that it is unlawful to take, possess, or destroy any birds of prey or to take, possess, or destroy the nest or eggs of any such bird unless authorized by the CDFW.

4.2.4 California Fish and Game Code, Section 1602

The FGC (Section 1600 et seq.) requires a Streambed Alteration Agreement with the CDFW for activities that would alter the bed or banks, or divert or obstruct the flow, of any stream. CDFW typically asserts that a Streambed Alteration Agreement is required for projects affecting riparian and wetland habitat.

4.3 REGIONAL AND LOCAL REGULATIONS

4.3.1 Multiple Species Habitat Conservation Plan Consistency

The MSHCP is a comprehensive multi-jurisdictional effort that includes Riverside County and multiple cities in Western Riverside County. Rather than addressing sensitive species on an individual basis, the MSHCP focuses on the conservation of 146 species, proposing a Reserve system of approximately 500,000 acres and a mechanism to fund and implement the Reserve system (County 2003). The MSHCP allows Permittees to convey third-party take coverage for MSHCP-covered species and their associated habitats potentially impacted by projects. The MSHCP streamlines the incidental take process by allowing projects to rely on existing permits rather than individual applicants seeking their own take authorization from the USFWS and/or CDFW. The MSHCP was adopted on June 17, 2003, by the Riverside County Board of Supervisors. The Incidental Take Permit and NCCP Permit were issued by USFWS and CDFW, respectively, in June 2004. Section 3.6 above and Section 5.6 below demonstrate the project's consistency with the MSHCP.

4.3.2 Stephens' Kangaroo Rat Habitat Conservation Plan

The Habitat Conservation Plan (HCP) for Stephens' kangaroo rat (*Dipodomys stephensi*; SKR) describes the conservation, mitigation, and monitoring measures that are implemented within Core Reserves. Within the SKR HCP, there are seven Core Reserves, totaling 41,221 acres for the conservation of SKR and associated habitat. The HCP provides a 30-year incidental take authorization for SKR on lands within its boundaries, which includes 533,954 acres within the County of Riverside and the Cities of Corona, Hemet, Lake Elsinore, Moreno Valley, Murrieta, Perris, Riverside, and Temecula.

The project site is not located within the SKR HCP; therefore, the project is not required to pay an SKR mitigation fee for incidental take authorization under the SKR HCP. Based on the location of the project site, the MSHCP provides full take coverage for SKR.

4.3.3 Protection of Oak Trees

City General Plan Resource Management Policy RM-13 states that native oak trees (*Quercus* spp.) should be preserved whenever feasible, and that if preservation is not possible, trees should be replaced with oak trees of the same species at a ratio of 1:1. This policy is implemented through the City's Ordinance (Chapter 18.80; City 2016), which protects heritage oak trees, protected oak trees, and stands of oak trees (oak groves), which are defined as the following:

- Heritage oak tree: An oak tree of the genus *Quercus* other than a protected oak tree or scrub oak that has a trunk measuring 12 inches or more in diameter, as measured 4.5 feet from the natural grade (i.e., DBH).

- Protected oak tree: An oak tree of the genus *Quercus*, including Nuttall's scrub oak (*Quercus dumosa*), other than a heritage oak tree or scrub oak, which has a trunk measuring two inches or more in diameter, as measured 4.5 feet from the natural grade (i.e., DBH).

- Protected stand of oak trees (oak grove): A cluster of four or more oak trees of the genus *Quercus*, including Nuttall's scrub oaks.

The City requires an Oak Tree Preservation and Replacement Permit for projects that propose removing or encroaching into the protected zone (i.e., five feet from the dripline or 15 feet from the trunk, whichever is greater) of heritage oak trees, protected trees, or protected stand of oak trees. To obtain a permit, a Plan must be submitted in conjunction with the Permit application.

5.0 PROJECT EFFECTS

This section describes potential direct and indirect impacts associated with the proposed project. Direct impacts immediately alter the affected biological resources such that those resources are eliminated temporarily or permanently. Indirect impacts consist of secondary effects of a project, including noise, decreased water quality (e.g., through sedimentation, urban contaminants, or fuel release), fugitive dust, colonization of non-native plant species, animal behavioral changes, and night lighting. The magnitude of an indirect impact can be the same as a direct impact; however, the effect usually takes longer to become apparent.

The significance of impacts to biological resources present, or those with the potential to occur, was determined based on the sensitivity of the resource and the extent of the anticipated impacts. For certain, highly sensitive resources (e.g., a federally listed species), any impact would be significant. Conversely, other resources that are of low sensitivity (e.g., species with a large, locally stable population in the County but declining elsewhere) could sustain some impact with a less-than-significant effect.

According to Appendix G of the CEQA Guidelines, project impacts to biological resources would be considered significant if they would:

(a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by CDFW or USFWS.

(b) Have a substantial adverse effect on any riparian habitat or sensitive natural community identified by local or regional plans, policies, regulations, or by CDFW or USFWS.

(c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the CWA (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling hydrological interruption, or other means.

(d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with an established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites.

(e) Conflict with local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.

(f) Conflict with provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.

5.1 SENSITIVE SPECIES

5.1.1 Rare Plant Species

No Impacts

None of the 20 rare plant species recorded within the vicinity of the project site was considered to have a potential to occur based on geographic range, elevation range, and/or lack of suitable habitat (refer to Appendix G). Therefore, no impacts to rare plant species will occur, and no mitigation is required. NEPSSA species are discussed further in Section 5.6.2 below.

5.1.2 Sensitive Animal Species

Less than Significant Impacts with Mitigation Incorporated

Of the 28 sensitive animal species recorded within the El Casco and Yucaipa quadrangles, 23 species were considered to have no potential to occur in the project site due to lack of suitable habitat (refer to Appendix H). Therefore, no significant impacts to these sensitive wildlife species will occur. Based on the limited quantity and diversity of nectar resources in the project site, a lack of known occurrences within adjacent areas, and limited potential nesting habitat, the project site does not contain habitat suitable to support CBB, and focused surveys are not warranted. The results of the habitat assessment for CBB are discussed in detail in a separate letter report provided in Appendix F.

The remaining five species were determined to have a low potential to occur in the project site based on the presence of low-quality habitat, limited acreage of habitat, and lack of recent observations within the immediate vicinity of the project site. These species include BUOW, Los Angeles pocket mouse, loggerhead shrike, Swainson's hawk (foraging potential only), and white-tailed kite. These species are discussed in detail below.

MSHCP Adequately Conserved Species: Loggerhead shrike is a State SSC, Swainson's hawk is State threatened, and white-tailed kite is State fully protected. While these three species are considered adequately conserved under the MSHCP, there is no allowable take of white-tailed kite (i.e., CDFW FP), nor is there any allowable take of any of these bird species if they are nesting. Measure BIO-2 would be implemented to avoid potential impacts to any nesting birds if present at the time of construction.

MSHCP Not Adequately Conserved Species: BUOW is State candidate threatened species and Los Angeles pocket mouse is a State SSC; neither species is adequately conserved under the MSHCP. MSHCP requirements for each species are described below.

- **BUOW:** An assessment for suitable habitat is required for projects located within a BUOW Survey Area. When suitable habitat is found on a project site, focused burrow surveys are required, and if suitable burrows are found, focused owl surveys are required. Based on the results of all three steps, conducted per the RCA 2006 protocol, BUOW are absent from the

proposed project site. Due to the presence of suitable habitat, the MSHCP requires that a pre-construction survey be conducted within 30 days prior to ground-disturbing activities (i.e., earthwork, clearing, grubbing, watering, staging, etc.) occurring on the project site (refer to Measure BIO-1 in Section 6.0 below). If BUOW is observed during the pre-construction survey, the RCA and Wildlife Agencies (i.e., CDFW and USFWS) must be immediately notified. Furthermore, active BUOW nests must be avoided. The Project Proponent would also coordinate with the RCA and Wildlife Agencies to determine whether a BUOW Protection and Relocation Plan is required.

- **Los Angeles Pocket Mouse:** An assessment for suitable habitat is required for projects within a Mammal Species Survey Area. Given that the project site is not within a survey area, an assessment is not required.

5.2 SENSITIVE VEGETATION COMMUNITIES

5.2.1 California Department of Fish and Wildlife Sensitive Vegetation Communities/Habitats

No Impacts

The project would permanently impact approximately 4.5 acres (3.8 acres on-site, 0.7 acre off-site) and temporarily impact 0.4 acre (off-site only) of the project site (Table 3, *Sandalwood Commercial Development – Impacts to Vegetation and Land Uses*; Figure 8, *Impacts to Vegetation and Land Uses*). None of the vegetation communities mapped in the project site is considered sensitive pursuant to CDFW (2024b). Therefore, no impacts to sensitive vegetation communities will occur, and mitigation is not required. No development is proposed on the Northern Parcels, although the southern portion of Parcel 2 will be temporarily impacted by over-excavation during construction of the Sandalwood Commercial Development.

Table 3
SANDALWOOD COMMERCIAL DEVELOPMENT - IMPACTS TO VEGETATION AND LAND USES

Manual of California Vegetation/Oberbauer	Permanent Impacts (acres)[1]			Temporary Impacts (acres)[1]		
	On-site	Off-site	TOTAL	On-site	Off-site	TOTAL

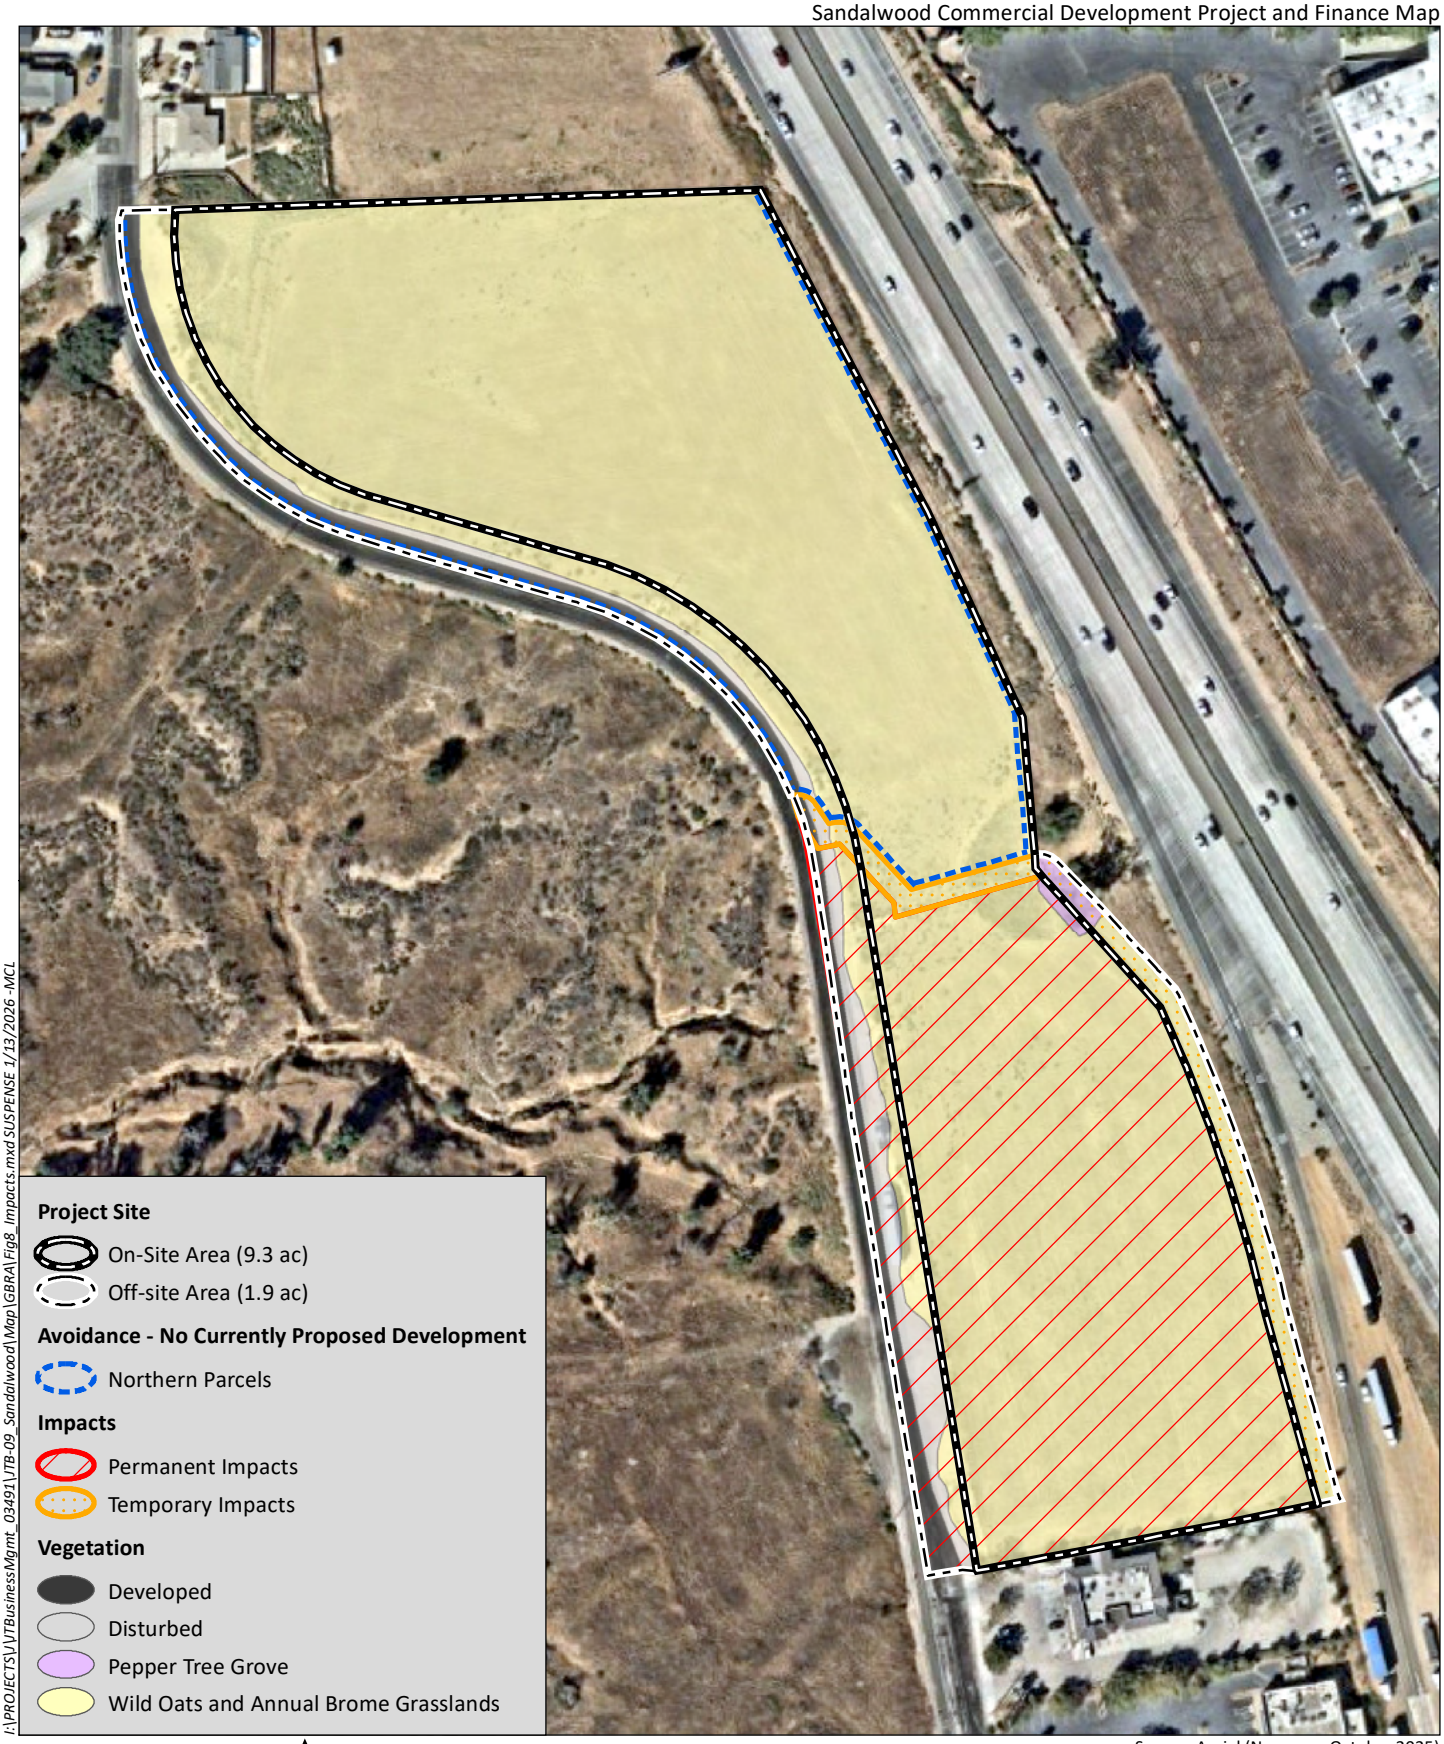
5.2.2 California Department of Fish and Wildlife Riparian Habitat and Streambed

No Impacts

The project site does not support any drainage features, wetlands, or other special aquatic sites under the jurisdiction of CDFW. As discussed in Section 1.4, the landowner and CDFW are unable to locate the LSA for the prior project, which was implemented in 2009 to verify previously required mitigation for impacts to jurisdictional waters. Additionally, the landowner is unable to locate documentation of mitigation implementation. Because mitigation requirements and implementation cannot be verified, the current Project Proponent has identified a mitigation approach to compensate for prior project impacts to CDFW jurisdiction. Permanent impacts that occurred in 2009 to 1.12 acres of CDFW jurisdiction shall be mitigated through off-site enhancement, restoration, and/or creation of jurisdictional streambed at a ratio of no less than 2:1 as detailed in Measure BIO-3. The proposed mitigation details are outlined in a DBESP (Appendix A).

5.3 U.S. ARMY CORPS OF ENGINEERS/REGIONAL WATER QUALITY CONTROL BOARD JURISDICTION

No Impacts



The project site does not currently support any drainage features, wetlands, or other special aquatic sites under the jurisdiction of USACE or RWQCB. Therefore, no impacts to USACE or RWQCB jurisdiction will occur, and mitigation is not warranted for impacts to USACE/RWQCB jurisdictional features. No mitigation was required for the prior project (2009) by USACE in the Section 404 Nationwide Permit, and RWQCB determined no action would be taken per the Section 401 Water Quality Certification.

5.4 WILDLIFE MOVEMENT AND MIGRATORY SPECIES

5.4.1 Wildlife Movement

Less than Significant

The project site does not directly connect to large blocks of habitat. The project site consists mostly of undeveloped land dominated by disturbed habitat with sparse vegetation. Although the western portion of the project site is adjacent to undeveloped land, the project site is constrained by a commercial development to the north and south and I-10 to the east. The project site is not identified by the MSHCP (County 2003) as being part of a local or regional corridor or linkage. The nearest linkage to the project site is PCL-23, which is approximately 0.25 mile to the south of the project site. The project site does not directly connect to PCL-23, which is separated by Sandalwood Drive and an existing commercial development. The project site supports limited vegetation that may be used by birds, smaller mammals, and reptiles that have adapted to human disturbance. Some wildlife may use the project site for foraging and/or nesting, but use of the project site by wildlife is restricted due to limited vegetative cover and adjacent disturbance from existing human development. The project would not significantly impact wildlife movement through the project site.

Source: Aerial (Nearmap, October 2025)

HELIX Environmental Planning

Impacts to Vegetation and Land Uses

Figure 8

5.4.2 Migratory Species

Less than Significant Impacts with Mitigation Incorporated

Development of the proposed project could disturb or destroy active migratory bird nests, including eggs and young. Disturbance to, or destruction of, migratory bird eggs, young, or nesting adults is in violation of the MBTA. Additionally, it is unlawful under FGC § 3503 to take, possess, or needlessly destroy the nest or eggs of any bird. Although suitable habitat for nesting birds in the project site is limited, herbaceous ground cover throughout the site and Peruvian pepper trees located in the eastern portion of the project site could provide habitat for protected nesting bird species. Measure BIO-2 would ensure the project is compliant with MBTA regulations and FGC.

5.5 LOCAL POLICIES AND ORDINANCES

No Impacts

The project site does not support any oak trees. Therefore, the project would not conflict with Chapter 18.80: Tree Preservation of the City's Municipal Code.

5.6 ADOPTED HABITAT CONSERVATION PLANS

Less than Significant Impacts with Mitigation Incorporated

The following sections demonstrate the project's consistency with the MSHCP requirements.

5.6.1 Habitat Evaluation and Acquisition Negotiation Strategy (MSHCP Section 6.1.1)

Because the proposed project is located within the MSHCP Criteria Area, specifically Cells 323 and 326 (Figure 7), the project is subject to the HANS process with the City to determine what portion (if any) of the project site is described for conservation and may be needed for the MSHCP Reserve system. The HANS process is followed by the JPR process with the RCA and Wildlife Agencies.

As discussed in Section 1.4, a HANS application was prepared by ECORP Consulting, Inc. in August 2007 for the prior project that was implemented in 2009. However, the landowner is unable to locate documentation that the HANS process or JPR was completed. The City, RCA, and Wildlife Agencies are also unable to locate documentation. A HANS application for the currently proposed project was submitted to the City in August 2022, and a JPR application was submitted to the RCA in September 2022. JPR processing is ongoing with the RCA. The Project Proponent is working to respond to JPR comments from RCA, which includes submitting an after-the-fact DBESP (Appendix A). After RCA issues its consistency findings, the Wildlife Agencies will perform their own joint review and provide additional comments or concurrence with the RCA findings. Under the City's direction, JPR processing, including RCA and Wildlife Agencies approval of the DBESP, must be completed before the Final MND is prepared. Given that the project site does not encompass areas targeted for conservation, the project would not conflict with MSHCP conservation goals.

5.6.2 Riparian/Riverine Areas and Vernal Pools (MSHCP Section 6.1.2)

The identification of MSHCP Riparian/Riverine resources is based on the potential for the habitat to support, or be a tributary to habitat that supports, Riparian/Riverine Covered Species. Riparian/Riverine Covered Species are identified in MSHCP Section 6.1.2. The MSHCP defines Riparian/Riverine habitat as "lands which contain Habitat dominated by trees, shrubs, or emergent mosses and lichens, which occur close to or which depend upon soil moisture from a nearby fresh water source; or areas with fresh water flow during all or a portion of the year" (County 2003). The MSHCP defines Vernal Pools as "seasonal wetlands that occur in depression areas that have wetlands indicators of all three parameters (soils, vegetation, and hydrology) during the wetter portion of the growing season but normally lack wetlands indicators of hydrology and/or vegetation during the drier portion of the growing season" (County 2003). Artificially created wetlands, except for those created intentionally to provide habitat, or resulting from the creation of open waters, or alteration of natural stream courses, are not considered MSHCP Vernal Pools.

The project site does not support Riparian/Riverine Areas or Vernal Pools, as defined by MSHCP. Depressional areas capable of supporting fairy shrimp species were not observed in the project site. The project would not directly or indirectly impact Riparian/Riverine Areas or associated species. Therefore, the proposed project does not conflict with MSHCP Section 6.1.2.

The project site does not support suitable habitat for MSHCP Riparian/Riverine bird species, including least Bell's vireo (*Vireo bellii pusillus*), southwestern willow flycatcher (*Empidonax traillii extimus*), and yellow-billed cuckoo (*Coccyzus americanus*). Therefore, focused surveys were not required. No evidence of hydric soils (e.g., mud cracks), vernal pool/wetland vegetation, or vernal pool/wetland hydrology were observed on the project site during the 2020 or 2021 site visits or in the project site during the 2022 or 2024 site visits. The Northern Parcel photographs (refer to Photographs 5 through 8 in Appendix D) were taken immediately after a rain event. The soils in the project site do not consist of clay or silt and are dominated by well-drained loam and sandy loam. Given that no signs of hydric soils, vernal pool/wetland vegetation, or vernal pool/wetland hydrology were observed during the habitat assessment, suitable fairy shrimp habitat is presumed absent from the project site. Therefore, focused surveys are not warranted, and no further action regarding fairy shrimp is required.

As discussed in Section 1.4, prior to grading in 2009, the project site contained MSHCP Riparian/Riverine Areas. These areas were impacted during drainage improvements in 2009. The prior landowner, RCA, and Wildlife Agencies are unable to locate a DBESP for the project that was implemented in 2009 to verify previously required mitigation. Additionally, the landowner is unable to locate documentation of mitigation implementation. Because mitigation requirements and implementation cannot be verified, the Project Proponent has coordinated with the landowner and Wildlife Agencies to identify a mitigation approach to compensate for the project impacts to MSHCP Riparian/Riverine Areas. A DBESP has been prepared to address after-the-fact consistency of the prior project (2009) with MSHCP Section 6.1.2, but is also part of the currently ongoing JPR process.

The DBESP demonstrates that the proposed mitigation provides equivalent or superior preservation for prior impacts that occurred on the project site. Permanent impacts that occurred in 2009 to 1.12 acres of MSHCP Riparian/Riverine Areas will be mitigated through off-site enhancement, restoration, and/or creation of jurisdictional streambed at a ratio of no less than 2:1 as detailed in Measure BIO-3. Additional details regarding the compensatory mitigation approach are provided in Appendix A. The JPR

process, including RCA and Wildlife Agencies' review and approval of the DBESP, will be completed before the Final MND is prepared.

5.6.3 Narrow Endemic Plant Species (MSHCP Section 6.1.3)

The project site is located within a NEPSSA. The project site was assessed for suitable habitat, and it was determined that no suitable habitat is present. Focused surveys are not warranted, and no further action regarding narrow endemic plant species is required. Therefore, the proposed project is consistent with Section 6.1.3 of the MSHCP.

5.6.4 Urban/Wildland Interface Guidelines (MSHCP Section 6.1.4)

Proposed developments adjacent to MSHCP Conservation Areas may create edge effects that can impact conserved biological resources. The MSHCP provides several guidelines that address potential indirect effects from proposed developments that are in proximity to MSHCP Conservation Areas. These guidelines include measures addressing the quantity and quality of runoff generated by the development (i.e., drainage and toxics), night lighting, noise, non-native invasive plant species, barriers to humans and animal predators, and grading/land development encroachment.

The project site is located within Cells 323 and 326, but is not within the portions of these Cells described for conservation, nor is it located adjacent to existing MSHCP Conservation Areas. PCL-23 is located approximately 0.25 mile to the south of the project site. Because the project site is separated from PCL-23 by Sandalwood Drive and an existing commercial development, the Urban Wildland Interface Guidelines are not directly applicable to the proposed project. However, as standard practice, the project would still be consistent with each applicable guideline, thus ensuring that there would be no conflicts with MSHCP Section 6.1.4.

Drainage

The proposed project is designed to convey all flows into the existing storm drain system, and the flows from the site will not be conveyed into the Northern Parcels. Therefore, the project would not directly or indirectly affect hydrology on the Northern Parcels or any off-site areas. The project site does not support natural drainage features. However, as standard practice, the project would incorporate measures to avoid the discharge of untreated surface runoff into downstream waters. Measures would include those required for construction pursuant to the State Water Resources Control Board General Construction Stormwater Permit and those required post-construction pursuant to the National Pollutant Discharge Elimination System and Municipal Storm Drain requirements. The project has also been designed to prevent the release of toxins, chemicals, petroleum products, exotic plant materials, or other elements that might degrade or harm biological resources or ecosystem processes downstream from the project.

Toxics

Land uses that use chemicals or generate bio-products that are potentially toxic or may adversely affect wildlife species, habitat, or water quality shall incorporate measures to ensure that the application of such chemicals does not result in a discharge into downstream waters. As standard practice, measures, such as those employed to address drainage issues, would be implemented by the proposed project to avoid the potential impacts of toxics.

Lighting

The project site is not located within or directly adjacent to an existing or proposed MSHCP Conservation Area, and PCL-23 is located 0.25 mile to the south of the project site. Any applicable requirements regarding lighting, including night lighting, if required by the City, would be implemented accordingly.

Noise

As standard practice, wildlife would not be subject to noise that would exceed residential noise standards. Temporary construction-related noise impacts would be reduced by the implementation of a number of measures, including the following:

- All construction work shall occur during daylight hours. The construction contractor shall limit all construction-related activities that would result in high noise levels according to the construction hours to be determined by the City.
- During all excavation and grading, the construction contractors shall equip all construction equipment, fixed or mobile, with properly operating and maintained mufflers, consistent with manufacturers' standards, to reduce construction equipment noise to the maximum extent possible. The construction contractor shall place all stationary construction equipment so that emitted noise is directed away from sensitive receptors nearest to the project site.
- The construction contractor shall stage equipment in areas that will create the greatest distance between construction-related noise sources and noise-sensitive receptors nearest to the project site during all construction.
- The construction contractor shall limit haul truck deliveries to the same hours specified for construction equipment. To the extent feasible, haul routes shall not pass through sensitive land uses or residential dwellings.

Invasives

Although the proposed project is located 0.25 mile from the nearest Conservation Area, there is still a potential for wind and water to transfer invasive plant material to these areas. The proposed project will not use invasive plants for erosion control, landscaping, windrows, or other purposes. Measure BIO-4 requires the project to comply with the MSHCP and avoid the use of invasive, non-native plants in accordance with MSHCP Table 6-2.

Barriers

Because the project site is not directly adjacent to the MSHCP Conservation Area, barriers and related signage are not necessary.

Grading/Land Development

The project site is not adjacent to an MSHCP Conservation Area. All grading will occur within the proposed project footprint and would not extend into any MSHCP Conservation Area.

5.6.5 Additional Surveys (MSHCP Section 6.3.2)

The project site is not within a CASSA for plants, nor an amphibian or mammal survey area. The project site is located within a BUOW survey area.

Based on the results of the focused BUOW surveys, the project site does not support BUOW. Prior to commencement of ground-disturbing activities within the project site, a pre-construction survey must be conducted within 30 days (RCA 2006; refer to Measure BIO-1 in Section 6.0 below). If BUOW is detected during the pre-construction survey, avoidance of active nests and/or relocation of BUOW would be required as outlined in Measure BIO-1 in Section 6.0 below.

As discussed above and with the implementation of Measure BIO-1, the proposed project is consistent with MSHCP Section 6.3.2.

5.6.6 Fuels Management (MSHCP Section 6.4)

As required by the MSCHP, any required fuel modification impacts would not extend into an MSHCP Conservation Area. The project does not propose any on-site fuel modification nor fuel modification adjacent to the project site. The project is consistent with MSHCP Section 6.4.

5.6.7 Multiple Species Habitat Conservation Plan and Stephens' Kangaroo Rat Fees

For the project to participate in the MSHCP, the Project Proponent is required to pay a Local Development Mitigation Fee (LDMF), which may be used by the RCA to acquire additional conservation lands, manage conservation lands, etc. The LDMF must be paid to the applicable Permittee (e.g., City of Calimesa) prior to the issuance of a building permit. The Project Proponent shall pay the LDMF to the City.

The project site is not within the SKR HCP and is not located within any of the Core Reserves (Riverside County Habitat Conservation Agency 1996). Therefore, the project is not required to pay an SKR mitigation fee for incidental take authorization under the SKR HCP.

6.0 AVOIDANCE/MINIMIZATION and MITIGATION MEASURES

The following provides recommended measures intended to avoid or minimize impacts to biological resources:

BIO-1 **Burrowing Owl:** Prior to the commencement of ground-disturbing activities (i.e., earthwork, vegetation clearing, grubbing, site watering, equipment and vehicle staging, etc.) on the project site, a pre-construction survey for burrowing owl (*Athene cunicularia*; BUOW) shall be conducted by a qualified biologist within 30 days prior to ground disturbance to determine the presence of BUOW. If the pre-construction survey is negative and BUOW is confirmed absent, then ground-disturbing activities shall be allowed to commence, and no further action is required. If construction is inactive for

more than 30 days, a pre-construction survey must be conducted again to confirm BUOW has not colonized the project site since it was last disturbed.

If BUOW is observed during the pre-construction survey, the Project Proponent shall immediately notify the Regional Conservation Authority (RCA) and the Wildlife Agencies (i.e., collectively, California Department of Fish and Wildlife, and U.S. Fish and Wildlife Service). All active burrows and owls shall be avoided with, at a minimum, the establishment of an appropriately sized exclusion buffer, under the oversight of a qualified biologist, to help ensure there would be no direct or indirect impacts to BUOW. The Project Proponent shall also coordinate with the RCA and the Wildlife Agencies to determine whether preparation and implementation of a BUOW Protection and Relocation Plan is necessary.

BIO-2 **Nesting Birds:** If construction activities (i.e., earthwork, vegetation clearing, grubbing, site watering, equipment and vehicle staging, etc.) must occur during the general bird nesting season for migratory songbirds (February 15 through August 31) and raptors (January 15 through August 31), a qualified biologist shall conduct a pre-construction survey of potential nesting habitat to confirm the absence of active nests belonging to migratory birds and raptors afforded protection under the Migratory Bird Treaty Act and California Fish and Game Code. The pre-construction survey shall be performed no more than seven days prior to the commencement of construction activities. If construction is inactive for more than seven days, an additional survey shall be conducted. The qualified biologist shall document the results of the pre-construction survey.

If the qualified biologist determines that no active migratory bird or raptor nests occur, the activities shall be allowed to proceed without any further action. If the qualified biologist determines that an active nest is present, an exclusion buffer shall be established. No impacts within the 300-foot (500 feet for raptors) exclusion buffer shall occur until the young have fledged the nest and the nest is confirmed by the qualified biologist to no longer be active. The biological monitor may modify (decrease or increase) the buffer size and/or propose other avoidance recommendations to help ensure that nesting birds are not disturbed.

BIO-3 **CDFW Jurisdiction and MSHCP Riparian/Riverine Areas**: In order for the project to fully demonstrate consistency with the Multiple Species Habitat Conservation Plan (MSHCP), and prior to preparation of the Final Mitigated Negative Declaration (MND) document, the Joint Project Review (JPR) process with the City of Calimesa, Regional Conservation Authority (RCA) and Wildlife Agencies (i.e., collectively, California Department of Fish and Wildlife, and U.S. Fish and Wildlife Service) shall be completed, including their review and approval of the Determination of Biological Equivalent or Superior Preservation (DBESP).

The JPR process is ongoing, and the final results of the JPR process, including relevant comments from the RCA and the Wildlife Agencies, shall be described in the Final MND, as applicable. Any changes to the proposed compensatory mitigation approach detailed in the DBESP, as required by RCA and Wildlife Agency comments, shall also be updated in the Final MND.

BIO-4 **MSHCP Landscape Plan Restrictions**: In accordance with MSHCP Section 6.1.4, no species listed in Table 6-2, *Plants that Should Be Avoided Adjacent to the MSHCP Conservation Area*, shall be used in the project landscape plans (including hydroseed mix used for interim erosion control).

SUMMARY

The Calimesa 7th Street Project (project or prior project) site is located in the City of Calimesa (City), Riverside County, California. At the request of the Sandalwood Travel Center, LP (current project proponent), HELIX Environmental Planning, Inc. (HELIX) has prepared this Determination of Biologically Equivalent or Superior Preservation (DBESP) analysis to address the project's after-the-fact consistency with the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP; County of Riverside [County] 2003). Project impacts to MSHCP Riparian/Riverine Areas occurred in 2009, and an agency-approved DBESP or record of mitigation implementation could not be located, as the project proponent involved with the prior project and associated approvals is deceased. In the absence of evidence that mitigation credits were ever obtained or that permit-related mitigation was ever implemented for impacts to the project site, the currently proposed Sandalwood Commercial Development Project and Finance Map (Sandalwood Project or proposed project), which encompasses the same footprint as the Calimesa 7th Street Project, must therefore provide an after-the-fact DBESP to demonstrate that the prior project is consistent with the MSHCP.

Specific to the previous Calimesa 7th Street Project, ECORP Consulting, Inc. (ECORP) prepared a Habitat Acquisition Negotiation Application (HANS) in 2007, which included a Biological Report. This report provides the only information known about site conditions prior to the grading that occurred in 2009. Gonzales Environmental Consulting, Inc. completed a formal wetland delineation in October 2005. ECORP conducted a rare plant survey for Narrow Endemic Rare Plant Species within the project site on May 23, 2006 and results were negative. Burrowing owl (*Athene cunicularia*) surveys were completed between August 10 and August 30, 2006, with the results also being negative. The project site did not support a suitable habitat for fairy shrimp or riparian birds.

In 2006, the majority of the project site was composed of non-native grasslands and remnant agriculture uses that involved periodic discing. The project site also originally contained three Riparian/Riverine Areas. These features are referred to in the 2007 Biological Report as "Stream," "Drainage 1," and "Drainage 2." Riversidian sage scrub occurred on the channel slopes and coast live oaks (*Quercus agrifolia*) in the lower elevation areas. There was a small stand of ornamental trees along the central eastern boundary, which is still currently present. The project site consisted of 1.12 acres of Riparian/Riverine Areas, which were filled in 2009 and are no longer present on the site.

A DBESP requires that the proposed compensatory mitigation include an approach that would result in biologically equivalent or superior functions and values as compared to the originally impacted functions and values on the project site. HELIX has identified a mitigation approach within the Cienega Canyon Preserve (the Preserve) and has worked directly with the Wildlife Agencies (California Department of Fish and Wildlife and U.S. Fish and Wildlife Service) and the Rivers and Land Conservancy. Through ongoing coordination spanning back to September 2024, the Wildlife Agencies have provided assistance and indicated that the following mitigation would provide equivalent or superior preservation of functions and values as compared to the originally impacted functions and values on 1.12 acres of Riparian/Riverine Areas: (1) enhance/restore 3.14 acres (approximately 3:1 ratio) within Cienega Creek in the southeast portion of the CPP; and (2) fund and prepare a hydrology report and grading plan to support restoration of over 65 acres of wetland meadow within the Preserve to its historic cienega condition. With the implementation of these two mitigation components, the project will provide appropriate mitigation to compensate for the 2009 impacts to MSHCP Riparian/Riverine Areas.

1.0 INTRODUCTION

At the request of the Sandalwood Travel Center, LP (current project proponent), HELIX Environmental Planning, Inc. (HELIX) prepared this Determination of Biologically Equivalent or Superior Preservation (DBESP) analysis to address after-the-fact consistency of the Calimesa 7th Street Project (project or prior project) with the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP; County of Riverside [County] 2003), specifically with MSHCP Sections 6.1.2 (Riparian/Riverine), 6.1.3 (Narrow Endemic Plant Species), and 6.3.2 (Additional Surveys and Procedures). Project consistency with other sections of the MSHCP is addressed in the Habitat Acquisition Negotiation Application (HANS; ECORP Consulting, Inc. [ECORP] 2007; Appendix A, *2007 HANS Application*). Project impacts to MSHCP Riparian/Riverine Areas occurred in 2009, but no approved DBESP or any other permit-related mitigation documentation could be located by the landowner, City of Calimesa (City), Western Riverside County Regional Conservation Authority (RCA), or Wildlife Agencies (California Department of Fish and Wildlife [CDFW] and U.S. Fish and Wildlife Service [USFWS]). The currently proposed Sandalwood Commercial Development Project and Finance Map (Sandalwood Project or proposed project), which encompasses the same footprint as the Calimesa 7th Street Project, must therefore provide an after-the-fact DBESP to demonstrate that the prior project is consistent with the MSHCP before RCA can issue findings of consistency for the currently proposed project.

This after-the-fact DBESP analysis provides information necessary for the City (MSHCP Permittee), RCA, and the Wildlife Agencies to find that the 2009 project impacts to Riparian/Riverine Areas, with mitigation and conservation measures incorporated, would adequately result in a biologically equivalent or superior MSHCP Conservation Area design and configuration compared to the pre-2009 baseline condition.

1.1 PROJECT LOCATION

The approximate 9.3-acre[1] project site evaluated in this report consists of two parcels, Assessor's Parcel Numbers (APN) 411-210-006 and -024. The project site is generally located west of Interstate (I) 10 and north of Sandalwood Drive (Figure 1, *Regional Location*). The project site is within Section 14 of Township 2 South, Range 2 West on the U.S. Geological Survey (USGS) 7.5-minute El Casco quadrangle (Figure 2, *USGS Topography*). The project site is bordered by 7th Street to the west and I-10 to the east (Figure 3, *Aerial Photograph [2009]*). It is located approximately 400 feet north of the intersection of 7th Street and Sandalwood Drive.

1.2 SITE HISTORY AND PROJECT DESCRIPTION

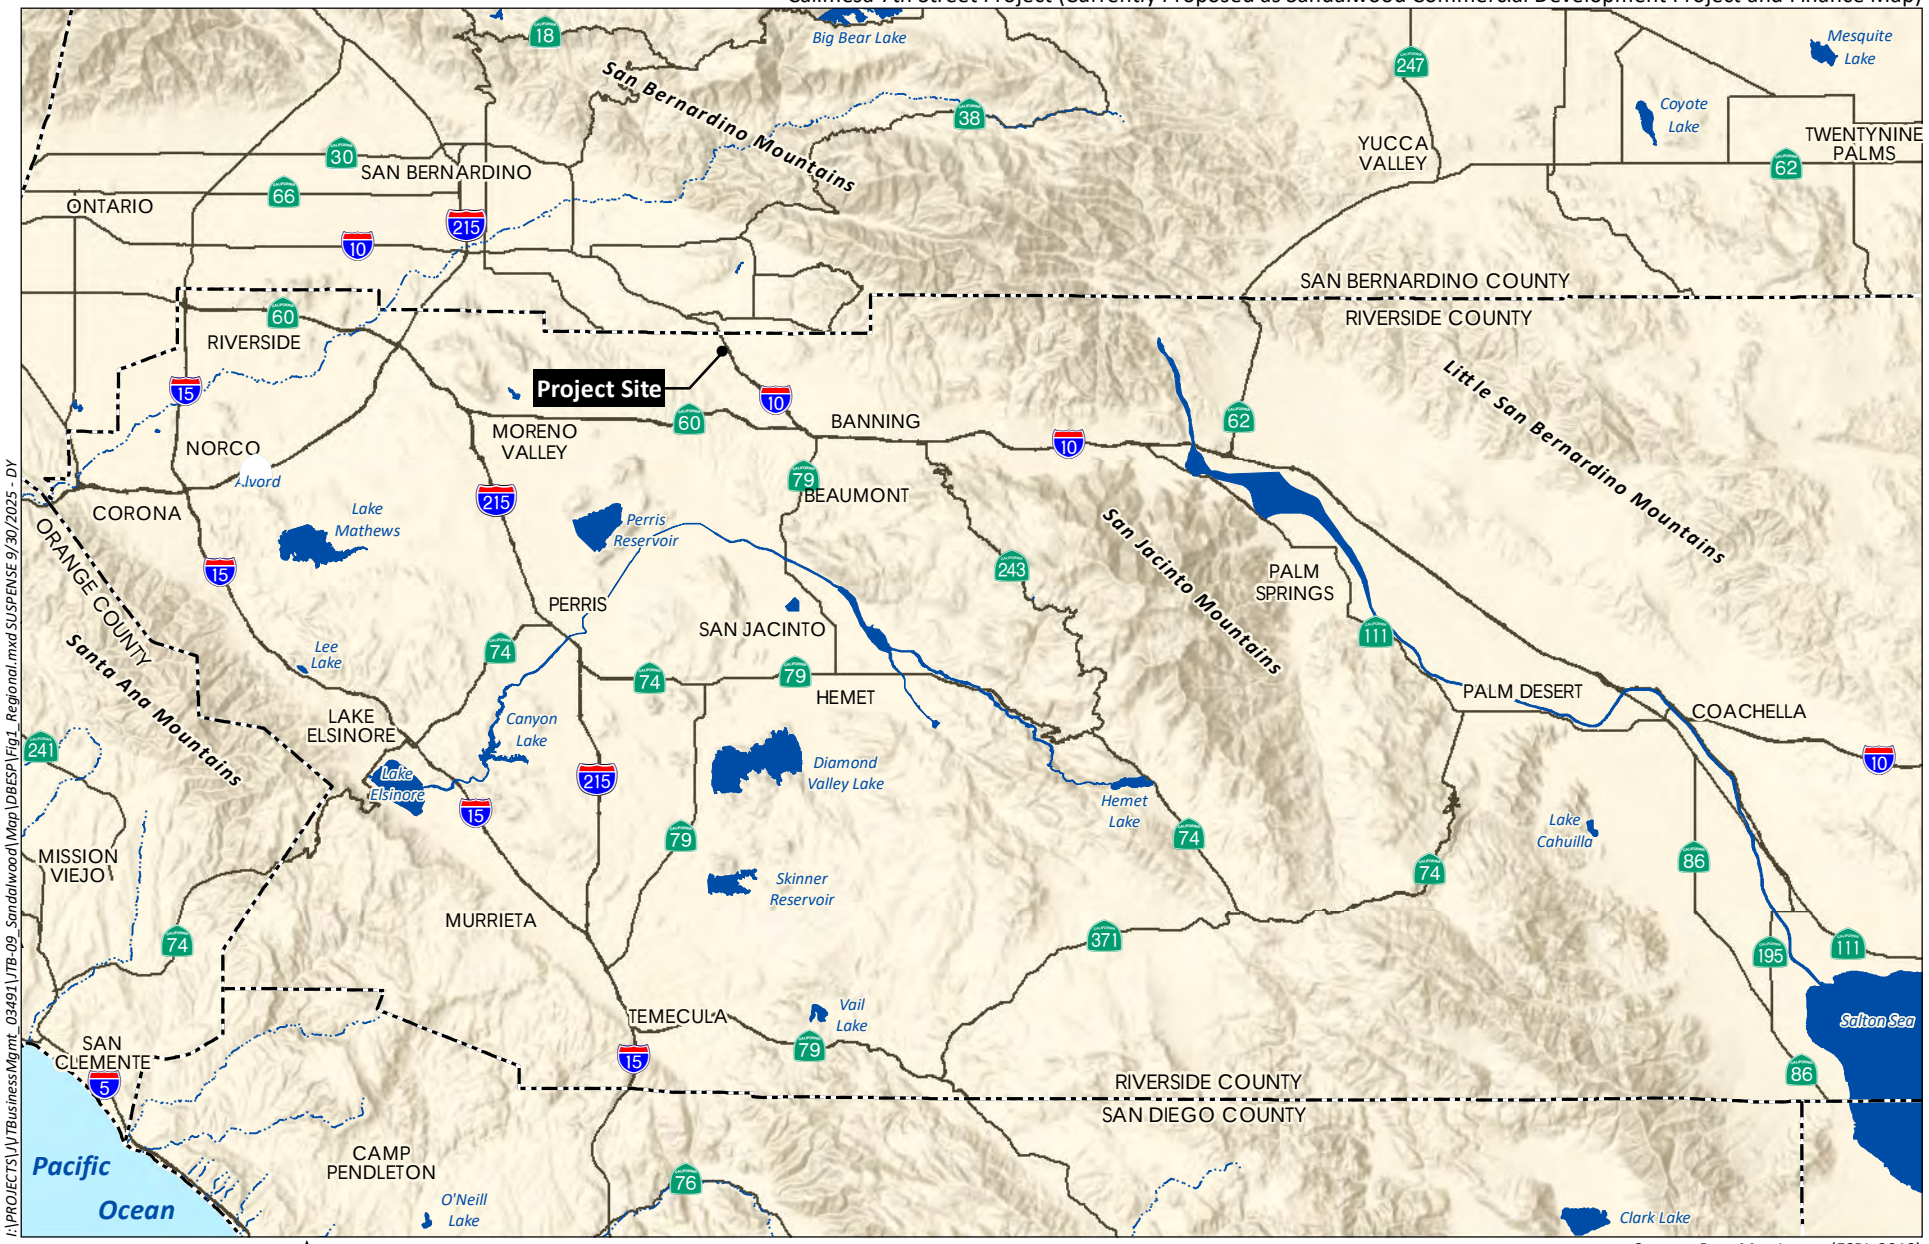
A Mitigated Negative Declaration (MND) for the project was adopted by the City in July 2007 (State Clearinghouse 2007031152). The MND evaluated the same project site (i.e., APNs 411-210-006 and -024) assessed in this report. The previous project consisted of rough grading the project site and drainage improvements, including installation of subsurface storm drain infrastructure (Figure 4, *Erosion Control Plan [2009]*). The project site was graded in 2009 as part of prior entitlements. No other

[1] Note that the 2007 Biological Report (ECORP 2007) referred to the previous project site as being approximately 10 acres in size. This same previous project site was actually 9.3 acres, and this adjusted acreage size will be used herein for accuracy. In addition, note that the MSHCP Consistency Analysis Report for the currently proposed project includes a larger 11.2-acre project site intended to also encompass 1.9 acres of off-site improvements. These additional 1.9 acres were not part of the previous project, and thus, are not covered under this after-the-fact DBESP.

construction has occurred within the project site since 2009, and the project site does not currently support any MSHCP Riparian/Riverine Areas. Because there are no remaining MSHCP Riparian/Riverine Areas on the site, the currently proposed Sandalwood Project would not impact MSHCP Riparian/Riverine Areas; however, the previous project mitigation requirement still needs to be satisfied.

The 2009 grading and drainage improvements resulted in impacts to MSHCP Riparian/Riverine Areas, which would have required a DBESP that proposed adequate mitigation. A DBESP or other permit-related mitigation documentation cannot be located by the landowner, City, RCA, or the Wildlife Agencies. Given that mitigation requirements and implementation cannot be verified, the project proponent and landowner have identified adequate mitigation for prior project impacts to MSHCP Riparian/Riverine Areas. This after-the-fact DBESP was prepared to demonstrate that the proposed mitigation provides equivalent or superior preservation for prior impacts that occurred on the project site.

1.3 EXISTING CONDITIONS



Pre-project conditions (i.e., prior to 2009) are documented in the project's HAN'S application, which also included the 2007 Biological Report (Appendix A). As described in Sections 3.1 and 3.3 of the Biological Report, the majority of the project site was composed of non-native grasslands and remnant agricultural uses that periodically involved discing. Prior to 2009, the project site also contained three Riparian/Riverine Areas, which are referred to in the 2007 Biological Report as "Stream," "Drainage 1," and "Drainage 2." Riversidian sage scrub occurred on the channel slopes and coast live oak trees in the lower elevation areas. There was a small stand of ornamental trees along the central eastern boundary, which is still currently present. Elevations on the project ranged from approximately 2,340 feet (713 meters) to 2,368 feet (722 meters). The soils mapped on the project site include Ramona very fine sandy loam (0 to 8 percent slopes) and San Timoteo loam (25 to 50 percent slopes; Appendix A).

The project site is located within a Narrow Endemic Plant Species Survey Area and Burrowing Owl (*Athene cunicularia*) Survey Area as designated by the MSHCP. All pre-2009 survey results were negative and no mitigation or further action regarding these resources was required. As such, these resources will not be discussed further in this after-the-fact DBESP.

The project site is not located within a Criteria Area Species Survey Area (CASSA) for plants, Amphibian Survey Area, or Mammal Survey Area designated by the MSHCP, and does not support suitable soils for Delhi sands flower-loving fly (*Rhaphiomidas terminatus abdominalis*). Resources associated with a CASSA, Amphibian Survey Area, Mammal Survey Area, and Delhi sands are not discussed further in this DBESP.

Representative photographs taken of the site in 2007 are included in this report as Appendix B, *Site Photographs*.

2.0 RIPARIAN/RIVERINE AREAS AND VERNAL POOLS (MSHCP SECTION 6.1.2)

2.1 METHODS

2.1.1 Riparian/Riverine Areas and Vernal Pools

Gonzales Environmental Consulting, Inc. completed a formal wetland delineation in October 2005. This report is referenced in the 2007 Biological Report (Attachment A), but was not appended to the 2007 Biological Report.

Riparian/Riverine Areas are defined in MSHCP Section 6.1.2 as follows:

> "Riparian/Riverine Areas are lands that contain habitat dominated by trees, shrubs, persistent emergents, or emergent mosses and lichens, which occur close to or depend upon soil moisture from a nearby freshwater source; or areas with freshwater flow during all or a portion of the year."

Vernal Pools are defined in MSHCP Section 6.1.2 as:

> "Vernal Pools are seasonal wetlands that occur in depression areas that have wetland indicators of all three parameters (soils, vegetation, and hydrology) during the wetter portion of the growing season but normally lack wetland indicators of hydrology and/or vegetation during the drier portion of the growing season. Obligate hydrophytes and facultative wetlands plant species are normally dominant during the wetter portion of the growing season, while upland species (annuals) may be dominant during the drier portion of the growing season. The determination that an area exhibits vernal pool characteristics and the definition of the watershed supporting vernal pool hydrology must be made on a case-by-case basis. Such determinations should consider the length of time the area exhibits upland and wetland characteristics and the manner in which the area fits into the overall ecological system as a wetland. Evidence concerning the persistence of an area's wetness can be obtained from its history, vegetation, soils, and drainage characteristics, uses to which it has been subjected, and weather and hydrologic records."

Section 6.1.2 of the MSHCP states that "areas demonstrating characteristics [of riparian/riverine habitat] which are artificially created are not included in these definitions" of Riparian/Riverine Areas.

2.1.2 Plant Species

The MSHCP lists 23 plant species that have the potential to occur in Riparian/Riverine and/or Vernal Pool habitats within the MSHCP Plan Area, which are listed below in Table 1, *MSHCP Riparian/Riverine and Vernal Pool Plant Species*. The project site was evaluated on May 23, 2006 to determine the potential for these species to occur.

Table 1
MSHCP RIPARIAN/RIVERINE AND VERNAL POOL PLANT SPECIES

Common Name	Scientific Name	Habitat
Brand's phacelia	*Phacelia stellaris*	Sandy washes and/or benches in alluvial flood plains.
California black walnut	*Juglans californica*	Open savannahs, creek beds, alluvial terraces, and north-facing slopes.
California Orcutt grass	*Orcuttia californica*	Vernal pools.
Coulter's matilija poppy	*Romneya coulteri*	Dry washes and canyons in chaparral and coastal sage scrub communities and disturbed areas.
Engelmann oak	*Quercus engelmannii*	Woodlands, mixed chaparral, and savannah grasslands.
Fish's milkwort	*Polygala cornuta* var. *fishiae*	Shaded, rocky places in canyons associated with woodlands and chaparral.
graceful tarplant	*Holocarpha virgata* ssp. *elongata*	Coastal mesas and foothills with grassland habitats.
lemon lily	*Lilium parryi*	Moist montane meadows.
Mojave tarplant	*Deinandra mohavensis*	Drainages within arid montane chaparral.
mud nama	*Nama stenocarpum*	Marshes, swamps, lake margins, and riverbanks along muddy embankments.
ocellated Humboldt lily	*Lilium humboldtii* ssp. *ocellatum*	Shaded montane canyons.
Orcutt's brodiaea	*Brodiaea orcuttii*	Vernally moist grasslands and vernal pools; occasionally occurs along stream embankments within clay soils.
Parish's meadowfoam	*Limnanthes gracilis* var. *parishii*	Montane meadows with abundant annual and herbaceous perennials and lack of shrubs.
prostrate navarretia	*Navarretia prostrata*	Coastal sage scrub, valley and foothill grassland, and vernal pools.
San Diego button-celery	*Eryngium aristulatum* var. *parishii*	Vernal pools.
San Jacinto Valley crownscale	*Atriplex coronata* var. *notatior*	Highly alkaline and silty-clay soils associated with alkali sink scrub, alkali playa, vernal pool, and annual alkali grassland habitats.
San Miguel savory	*Clinopodium chandleri*	Coastal sage scrub, chaparral, cismontane woodland, riparian woodland, and valley and foothill grasslands.
Santa Ana River woolly-star	*Eriastrum densifolium* spp. *sanctorum*	Sandy soils on flood plains and terraces within coastal scrub and chaparral communities.
slender-horned spineflower	*Dodecahema leptoceras*	Sandy soil associated with alluvial scrub; is often found on stream terraces and banks.

Common Name	Scientific Name	Habitat
smooth tarplant	*Centromadia pungens* ssp. *Laevis*	Alkali scrubs, playas, and grasslands; riparian woodland and streams.
spreading navarretia	*Navarretia fossalis*	Vernal pools, depressions, and ditches.
thread-leaved brodiaea	*Brodiaea filifolia*	Clay soils in vernally moist grasslands and vernal pool periphery are typical locales.
vernal barley	*Hordeum intercedens*	Saline flats and depressions in grasslands or vernal pools.

Source: County of Riverside (2003)

2.1.3 Wildlife Species

The MSHCP lists 12 sensitive wildlife species that have the potential to occur in Riparian/Riverine and/or Vernal Pool habitats within the MSHCP Plan Area, which are provided in Table 2, *MSHCP Riparian/Riverine and Vernal Pool Wildlife Species*. The project site was evaluated on May 23, 2006, for these species to have the potential to occur.

Table 2
MSHCP RIPARIAN/RIVERINE AND VERNAL POOL WILDLIFE SPECIES

Common Name	Scientific Name	Habitat
Riverside fairy shrimp	*Streptocephalus woottoni*	Deep vernal pools and other ephemeral basins that hold water for typically 30 or more days.
Santa Rosa Plateau fairy shrimp	*Linderiella santarosae*	Limited to vernal pools within the Santa Rosa Plateau.
vernal pool fairy shrimp	*Branchinecta lynchi*	Vernal pools and other ephemeral basins within patches of grassland and agriculture interspersed in coastal sage scrub and chaparral.
arroyo toad	*Anaxyrus californicus*	Washes and intermittent streams with open-canopy riparian forest.
California red-legged frog	*Rana aurora draytonii*	Perennial streams with dense, shrubby riparian vegetation.
mountain yellow-legged frog	*Rana muscosa*	Perennial waterways, often within open riparian vegetation.
Santa Ana sucker	*Catostomus santaanae*	Clear, cool perennial streams with loose sand, gravel, cobble, and boulders with algae, aquatic emergent vegetation, macroinvertebrates, and riparian vegetation.
bald eagle	*Haliaeetus leucocephalus*	Within proximity to lakes or other water bodies.
least Bell's vireo	*Vireo bellii pusillus*	Well-developed riparian scrub, woodland, or forest.
peregrine falcon	*Falco peregrinus*	Generally, areas with cliffs or tall buildings near water where prey (shorebirds and ducks) is concentrated.
southwestern willow flycatcher	*Empidonax traillii extimus*	Breeds within thickets of willows or other riparian understory usually along streams, ponds, lakes, or canyons.

Common Name	Scientific Name	Habitat
western yellow-billed cuckoo	*Coccyzus americanus occidentalis*	Extensive stands of mature riparian woodland.

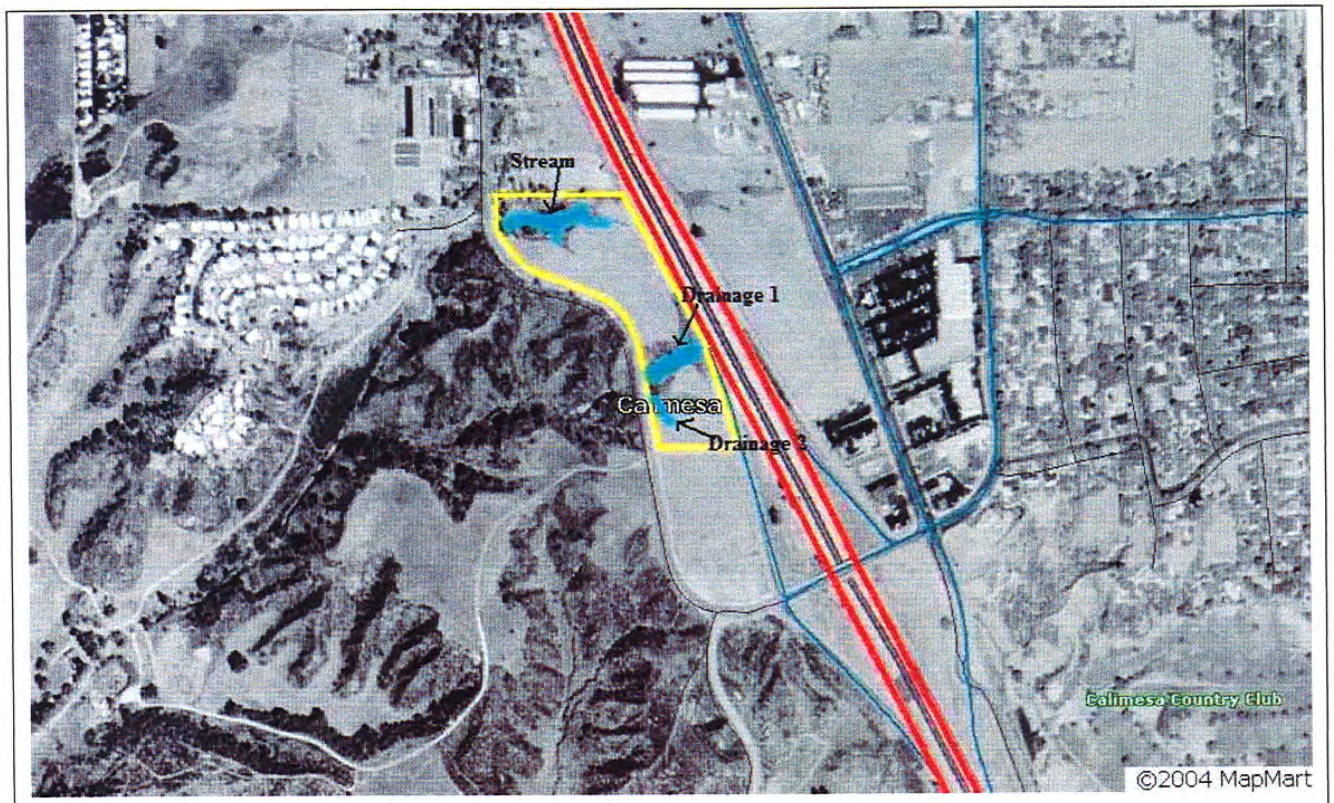
Source: County of Riverside (2003)

The MSHCP requires focused surveys to be conducted for projects that propose impacts to three invertebrate and three bird species, as described in detail below.

Invertebrates

Three sensitive fairy shrimp species occur in the MSHCP Plan Area, including Riverside fairy shrimp (*Streptocephalus woottoni*), Santa Rosa Plateau fairy shrimp (*Linderiella santarosae*), and vernal pool fairy shrimp (*Branchinecta lynchi*). Vernal pool fairy shrimp occurs throughout the Central Valley and in several disjunct populations in the County. This species exists in vernal pools and other ephemeral basins, often located in patches of grassland and agriculture interspersed in coastal sage scrub and chaparral. Riverside fairy shrimp occurs in Riverside, Orange, and San Diego counties, as well as in northern Baja California, Mexico. This species is typically found in deeper vernal pools and other ephemeral basins that hold water for long periods of time (30 or more days). Santa Rosa Plateau fairy shrimp is limited to the Santa Rosa Plateau in the County.

Birds



Riparian/Riverine Areas within the MSHCP Plan Area provide suitable habitat for sensitive bird species, such as least Bell's vireo (*Vireo bellii pusillus*), southwestern willow flycatcher (*Empidonax traillii extimus*), western yellow-billed cuckoo (*Coccyzus americanus occidentalis*), bald eagle (*Haliaeetus leucocephalus*), and peregrine falcon (*Falco peregrinus*). Typical habitat least Bell's vireo consists of well-developed riparian scrub, woodland, or forest dominated by willows, mule fat, and Fremont cottonwood. Least Bell's vireo will also use small patches of trees adjacent to dense, riparian habitat. Southwestern willow flycatcher and yellow-billed cuckoo require mature riparian forest with a stratified canopy and nearby water. Both the bald eagle and peregrine falcon occur primarily in and adjacent to open water habitats, with peregrine falcon occurring in riparian areas.

The MSHCP requires focused surveys to be conducted for projects that propose impacts to suitable habitat for least Bell's vireo, southwestern willow flycatcher, and/or yellow-billed cuckoo.

2.2 RESULTS

2.2.1 Riparian/Riverine Areas and Vernal Pools

Based on the 2007 Biological Report in the HANS application (Appendix A), the project site historically supported three MSHCP Riparian/Riverine Areas, with Stream 1 in the northern portion of the project site and Drainages 1 and 2 in the center of the site (Figure 5, *MSHCP Riparian/Riverine Areas [2007]*). The MSHCP Riparian/Riverine Areas totaled 1.12 acres, including 0.51 acre at the Stream, 0.13 acre at Drainage 1, and 0.48 acre at Drainage 2 (Table 3, *MSHCP Riparian/Riverine Areas*).

Feature Name	Acres[1]
Stream	0.51
Drainage 1	0.13
Drainage 2	0.48
TOTAL	**1.12**

[1] Acreages rounded to the nearest hundredth.

2.2.2 Plant Species

None of the 23 Riparian/Riverine plant species were noted during the rare plant survey conducted by ECORP on May 23, 2006 (refer to Section 3.6.1 of Appendix A). Although this DBESP is only focused on the previous 2009 impacts, it should be noted that conditions on the site have remained the same, meaning these plant species were also not found during the more recent survey efforts.

2.2.3 Wildlife Species

The 2007 Biological Report (Appendix A) stated that the project site does not support suitable habitat for fairy shrimp species. Soils within the project site were mapped as Ramona very fine sandy loam and San Timoteo loam, which are well-drained soils and not conducive to ponding. Prior to 1996, Drainage 2 was connected to Drainage 1. Sometime between 1996 and 2002, there appeared to be earthwork that separated the surface connection between the two drainages. It is unlikely that earthwork was completed without providing an outlet for water to flow from Drainage 2 to Drainage 1. A pipe may have been installed between Drainages 1 and 2 to allow water to continue to flow. This is supported given that no ponding is visible in aerial imagery from 1996 until 2009 (when grading occurred). Of the listed fairy shrimp species, Riverside fairy shrimp would have had the highest potential to occur within the project site based on geographic range. However, this species requires deep, persistent pools, which were not recorded in the 2007 Biological Report and are not visible in aerial imagery. Therefore, focused surveys were not warranted.

As stated in the 2007 Biological Report, Section 3.6 (Appendix A), the project site did not support suitable habitat for riparian bird species (least Bell's vireo, southwestern willow flycatcher, or yellow-billed cuckoo). Willow scrub or riparian forest habitats were not documented on the project site and do not appear to have been present based on historical aerial imagery review. Therefore, focused surveys were not warranted. Although this DBESP is only focused on the previous 2009 impacts, it should be noted that recent survey efforts have verified that conditions on the site have remained the same, meaning suitable habitat for these riparian bird species continues to be absent.

2.3 PROJECT IMPACTS

2.3.1 Riparian/Riverine Areas

The prior project resulted in 1.12 acres of permanent impacts to MSHCP Riparian/Riverine Areas. These drainage features were filled and replaced with a sub-surface storm drain system in 2009.

2.3.2 Plant Species

No Riparian/Riverine plant species were documented on the project site.

2.3.3 Wildlife Species

The project site did not support a suitable habitat for Riparian/Riverine wildlife species.

2.4 MITIGATION AND EQUIVALENCY

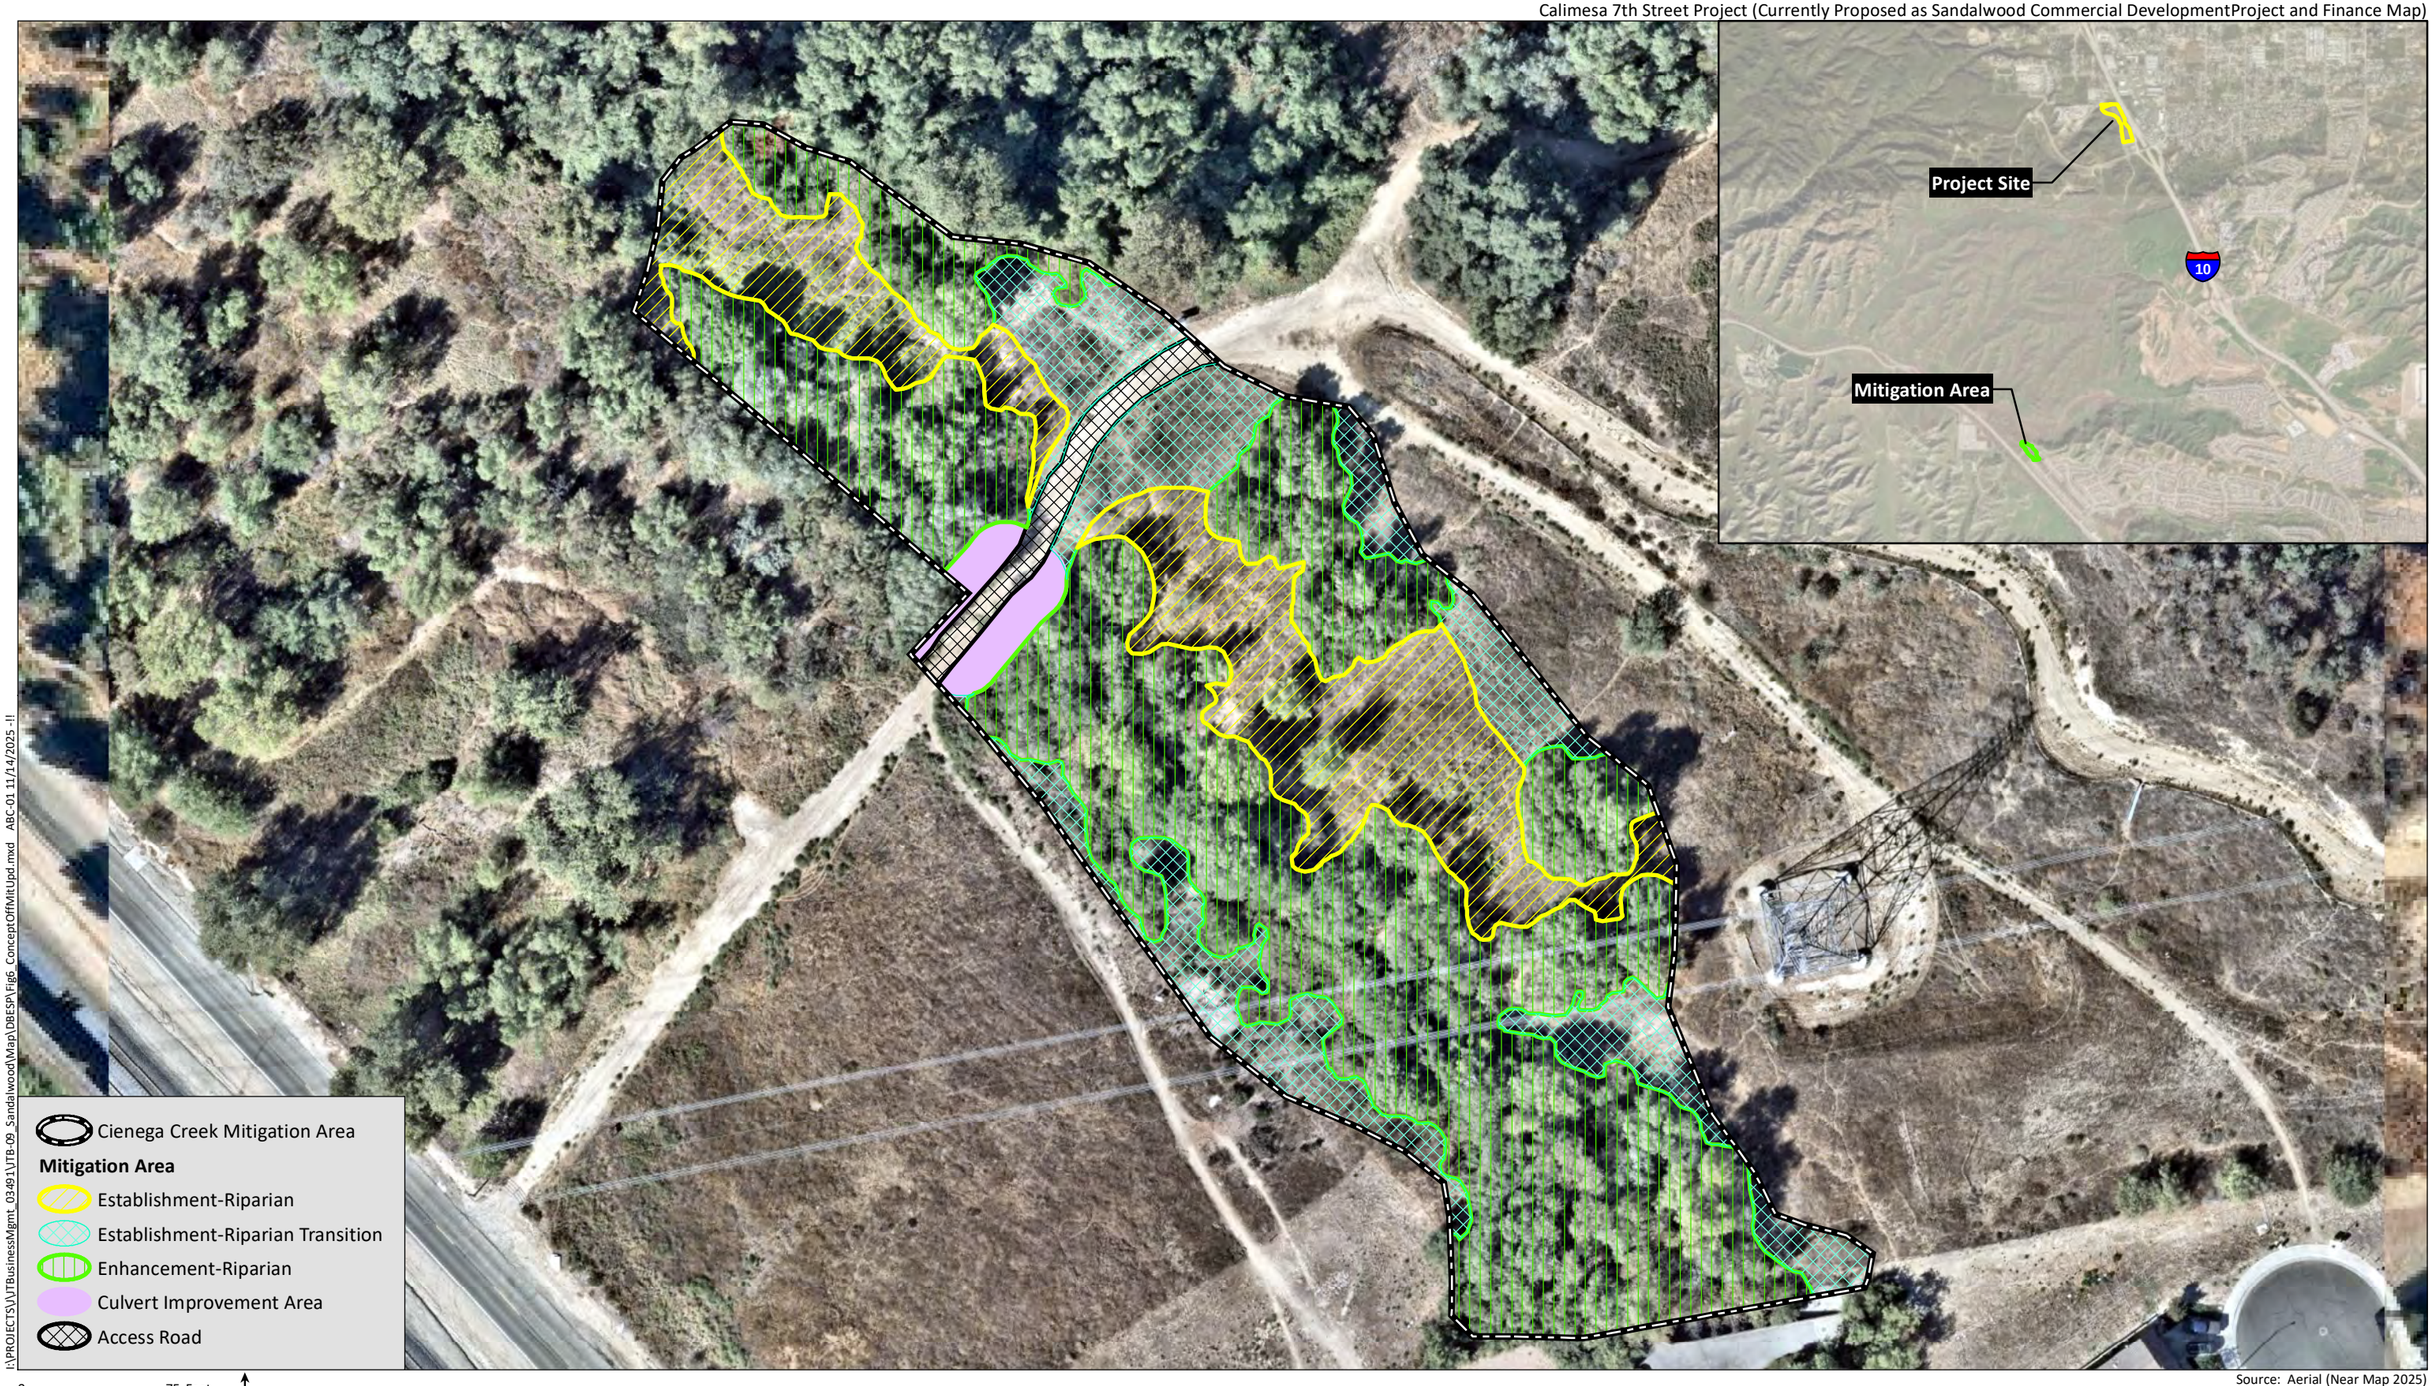
2.4.1 Direct Effects

The 2009 project impacted approximately 1.12 acres of permanent impact to Riparian/Riverine Areas, which included impacts to unvegetated streambed, coast live oaks, and Riversidian sage scrub. To provide equivalent or superior compensatory mitigation for after-the-fact impacts on the project site, HELIX has developed a compensatory mitigation approach within the Cienega Canyon Preserve (Preserve) and worked directly with the Wildlife Agencies and Rivers and Land Conservancy (RLC), the Preserve owner. Agency coordination has consisted of several meetings spanning back to September 5, 2024.

The Preserve is in the City of Calimesa and is located within the same watershed (Santa Ana Watershed) and MSHCP Plan Area (Pass Area) as the project site. Considered together, the Wildlife Agencies have indicated that the following will provide equivalent or superior preservation for project impacts to 1.12 acres of Riparian/Riverine Areas:

1. **Cienega Creek Mitigation Area** – approximately 3.14 acres (approximately 3:1 ratio) of off-site riparian enhancement and establishment, as well as riparian-transition establishment within Cienega Creek. This also includes replacement/improvement of a failing culvert that provides primary access to the Preserve.

2. **Cienega Hydrology & Grading Study** – includes funding and preparation of a hydrology report and grading plan to support restoration of over 65 acres of wetland meadow within the Preserve to return it to its historic cienega condition.



The proposed compensatory mitigation components are described in detail below.

<u>Cienega Creek Mitigation Area</u>

The Cienega Creek mitigation area is proposed within the Preserve, which is located on the east side of San Timoteo Canyon Road, approximately 0.5 mile northwest of the San Timoteo Canyon Road and Palmer Avenue intersection (Figure 6, *Conceptual Off-site Mitigation*). Specifically, the 3.14-acre mitigation area is located within Cienega Creek in the southwest corner of the Preserve near San Timoteo Canyon Road and southwest of the historic cienega feature. Upstream of the mitigation area, Cienega Creek was channelized by the Summerwind Residential Development (southeast of the Preserve) in late 2005. Cienega Creek is a tributary of San Timoteo Creek.

The final mitigation grading/planting design is pending completion of a hydrology study, which is currently underway. Upon completion of the hydrology/grading study report (described in the subsequent section), a Habitat Mitigation and Monitoring Plan (HMMP) will be prepared, followed by

Calimesa 7th Street Project (Currently Proposed as Sandalwood Commercial DevelopmentProject and Finance Map)

Source: Aerial (Near Map 2025)

I:\PROJECTS\VLTBusinessMgmt_03491\VTB-09_Sandalwood\Map\DBESP\Fig6_ConceptOffMitUpd.mxd ABC 01 11/14/2025 -!!

HELIX Environmental Planning

Conceptual Off-Site Mitigation

Figure 6

preparation of a Long-Term Management Plan (LTMP). The project proponent will be responsible for the long-term funding needs for the mitigation area, which will be detailed in the LTMP. Both the HMMP and LTMP will be reviewed and approved by RLC.

Mitigation within the 3.14-acre mitigation area will consist of a combination of establishment and enhancement, which are described below.

- *Riparian Establishment*: A pilot channel will be graded parallel to the existing streambed on the northeast side to help dissipate flows and help support native riparian plant establishment. Non-native species will be removed, and native riparian species will be planted within roughly 0.67 acre.

- *Riparian-transition Establishment*: Non-native species will be removed, and riparian-transition species will be planted within roughly 0.58 acre next to existing riparian habitat and proposed riparian establishment within the mitigation area.

- *Riparian Enhancement*: Non-native species will be removed within roughly 1.83 acres of existing riparian vegetation.

Other improvements within the mitigation area will include:

- *Culvert Improvements:* Drainage within the mitigation area will be improved, which will encompass roughly 0.06 acre. The culvert that conveys flow from Cienega Creek at the downstream end of the mitigation area is old and filled with sediment. The culvert improvements are necessary to increase sediment transport and stormwater flow into the proposed widened streambed and proposed excavated flood terrace to support the proposed downstream riparian establishment area. While culvert designs are still being completed, the proposed culvert replacement will be contained within the improvement area shown in Figure 6 and will likely include a new headwall and riprap. Native and locally sourced riparian species will be planted to ensure highest survivability, and the culvert improvement area is expected to support riparian canopy.

- *Access Road:* The primary access to the Preserve from San Timoteo Canyon Road is via an unpaved road, of which 0.07 acre overlaps the mitigation area. Although shown within the mitigation area, this acreage is not included in the 3.14 acres of proposed mitigation. The sediment-choked culvert described above results in frequent flooding of the access road. The access road is often inaccessible to RLC during and after typical storm events, which poses challenges for their site management and community programs. Southern California Edison (SCE) holds easements within the Preserve, and regular access via the road/stream crossing is required to inspect and maintain their power line facilities. The improved culvert will reduce flooding, ensuring reliable access for RLC, SCE, Riverside County Parks and Open Space District, staff managing MSCHP resources, and other entities requiring entry to the Preserve.

Cienega Hydrology & Grading Study Report

In addition to the Cienega Creek mitigation, at the Wildlife Agencies' request, the project proponent will fund preparation of a hydrology/grading study report (Cienega Study) that will expand on a 36-acre study area in the upper cienega of the Preserve that was analyzed in a prior conceptual

hydrology/grading study report (Tory R. Walker Engineering 2021). Within the Preserve, mitigation for permanent impacts to jurisdictional waters have not been finalized, approved by RLC, funded, or implemented for an unrelated construction project (Oak Valley Town Center Commercial Development). The Oak Valley Town Center project site is located directly north/northeast of the Preserve, and the project went bankrupt following the completion of grading in early 2024. Their proposed 36-acre mitigation remains in limbo as CDFW legal works to secure the surety bond for the mitigation.

Pursuant to a Memorandum of Understanding between RLC and the RCA executed March 20, 2017, 31.16 acres of the Preserve are considered Public Quasi-Public lands under the MSHCP and the remainder 326.66 acres of the Preserve are considered MSHCP Additional Reserve Lands. In the pre-1800s, the valley floodplain known as "the cienega" encompassed over 80 acres of the 357.82-acre Preserve. The cienega was historically one of only a few known wetland meadows occurring in southern California. In fact, the Spanish word "ciénega" refers to wetland systems unique to the American Southwest and Northern Mexico that feature alkaline, freshwater, spongy, wet meadows with shallow saturated soils nestled in arid environments.

Unfortunately, agricultural activities that occurred in the late 1800s and into the 1990s, combined with the contemporary placement of undersized I-10 culverts upstream of the Preserve have resulted in severe degradation of the unique wet meadow habitat that likely once thrived on the property. The Cienega Restoration Study will provide expanded hydrology/grading analysis and will be prepared as part of the project mitigation efforts to cover the entire 65-plus acres of the cienega valley floor located within the Preserve, thereby providing the framework for RLC to restore the entirety of the cienega valley over time. Thus, the Cienega Study will be tremendously valuable both to RLC and the MSHCP for the future restoration of the cienega. RLC acquired the Preserve from Oak Valley Partners, L.P., in 2003 using grant funding it acquired from the State of California Wildlife Conservation Board. There is no dedicated stewardship endowment for the Preserve and RLC conducts limited management using grants and general operating funds. Thus, RLC does not currently have the capacity to fund such a study in excess of $100,000. Restoration of the cienega will help return historic biological function and values to the cienega while also generating funding that RLC can use to manage the Preserve's extremely unique habitats.

Equivalent and Superior Preservation Discussion

The impacted Riparian/Riverine Areas on the project consisted of headwater ephemeral streambeds with coast live oak in the drainage bottoms (with little to no understory) and Riversidian sage scrub on the drainage slopes. The proposed mitigation encompasses perennial streambed with associated riparian and wetland habitat and is considered of significantly higher biological function and value than the impacted areas on the project site. Functions lost from the impacted Riparian/Riverine Areas include groundwater recharge, nutrient cycling (e.g., nitrogen, phosphorous), limited sediment transport (due to the headwater conditions and culvert at 7th Street), and potential wildlife habitat. According to the project's 2007 Biological Report, the project site Riparian/Riverine Areas did not support suitable habitat for Riparian/Riverine wildlife, with no Riparian/Riverine plant species being documented during rare plant surveys. The project site did not function as a wildlife movement corridor given the I-10 freeway at the upstream end constraining wildlife movement through the area. In contrast, the proposed mitigation at the Preserve will restore and improve hydrological and ecological functions by installing a pilot channel and improving the culvert crossing, which is currently ineffective due to its age and significant sediment accumulation. Improvements to the culvert will not only benefit the proposed mitigation area both upstream and downstream of the culvert, but these actions will also reestablish

this important primary access point to the Preserve. Riparian and wetland habitat quality will be enhanced by removing non-native and invasive species and planting native species. The proposed mitigation will improve habitat connectivity within the Preserve and provide benefits to downstream Riparian/Riverine Areas throughout the MSHCP Plan Area. The proposed mitigation will expand high-quality habitat in the Preserve for Riparian/Riverine animals within the Preserve, such as least Bell's vireo, which has previously been observed in existing riparian areas adjacent to the proposed mitigation area. The proposed mitigation will support MSHCP conservation objectives and strengthening long-term watershed resilience.

In addition, preparation of the Cienega Study described above will establish a framework for RLC's future restoration efforts aimed at restoring this exceptionally rare and unique habitat in southern California. The report will also create a pathway for invaluable contributions to the preservation of unique Riparian/Riverine habitat within the MSHCP Plan area.

Based on the above mitigation contributions, HELIX concludes that the proposed 3.14 acres of off-site riparian enhancement and establishment and riparian-transition establishment within the Preserve, combined with the expanded Cienega Study, will provide superior preservation of resources compared to the 1.12 acres of permanent impacts that occurred within the project site in 2009.

2.4.2 Indirect Effects

As discussed in the 2007 Biological Report, Section 3.7 (Appendix A), the project implemented measures in 2009 to prevent unfiltered runoff and siltation to the west into tributaries of San Timoteo Creek.

3.0 CERTIFICATION/QUALIFICATIONS

I hereby certify that the statements furnished above and in the attached exhibits present the data and information required for this biological evaluation, and that the facts, statements, and information presented are true and correct to the best of my knowledge and belief.

RE: HANS Application (411-210-024 and -006)

Dear Ms. Stark:

ECORP Consulting, Inc. is pleased to submit this HANS application for the Calimesa 7th Street project in Riverside County (APNs 410-210-024 and -006).

Enclosed please find:

Section 1: HANS Application, wet-signed
Section 2: Aerial key map of site and corresponding site photos
Section 3: Biological report

If you have any questions about this application please contact Mr. Scott Taylor, in our Redlands office at:

PRINTED NAME OF PROPERTY OWNER(S)/OWNER'S REPRESENTATIVE

SIGNATURE OF PROPERTY OWNER(S)/OWNER'S REPRESENTATIVE

All signatures must be originals ("wet-signed"). Photocopies of signatures are **not** acceptable.

SECTION 2
BACKGROUND INFORMATION

Please provide the following information. If you need more room, submit a separate page.

A. Related Permit(s), Pre-application review (PAR) or Development Application Case Number(s) (if applicable): City of Calimesa plan check #02416/2145

B. Identify the MSHCP Criteria cell(s) in which the parcel is located (this information can be found on the Conservation Summary Report Generator available online at **http://www.rctlma.org/gis/rciprepgen.html**): 323 and 326

C. Were any previous biological surveys performed on the above reference APN's? ☒ YES ☐ NO
If yes, please provide a copy or reference the County Biological Report Number.
Report attached

D. Describe unique biological features (i.e. washes, streams, oak trees, juniper trees, and rock outcroppings):
Washes, oak trees

E. Explain how the parcel(s) relates to the conservation criteria described within the MSHCP. (See attached HANS Application Guide).
The parcel is north of and outside of proposed conservation areas.

SECTION 3
CHECKLIST

The following items/information must be supplied when the HANS application is submitted to the Environmental Programs Department (EPD), otherwise it will be deemed incomplete:

A. A series of current ground-level photographs showing the project site, together with a key map showing the location and direction from where the photographs were taken and the approximate area of view (may be included in biological documents).

B. Site Map which clearly shows the following information:
1. North Arrow.
2. Overall dimensions of the property and lot lines.
3. Location and names of adjoining streets.
4. Location and dimensions of existing and proposed buildings, structures, and driveways.
5. Location and dimensions of any easements, Environmental Constraint Sheet (ECS), or rights-of-way traversing the property.

C. If applicable, background information:
1. Lot line adjustments (proof of recordation), building permits, site preps, etc.
2. Topographical maps (optional).
3. Development plans (optional).

All documentation supplied must be in hard copy format. To further expedite the review process, it is recommended that the documentation also be submitted in digital format via CD-Rom. Acceptable digital formats for reports are Microsoft Word, Adobe Acrobat PDF, or rich text file. For import into the County GIS, please assign a coordinate system to any data provided. Technical GIS digital data submission specifications are included in Table 1 below.

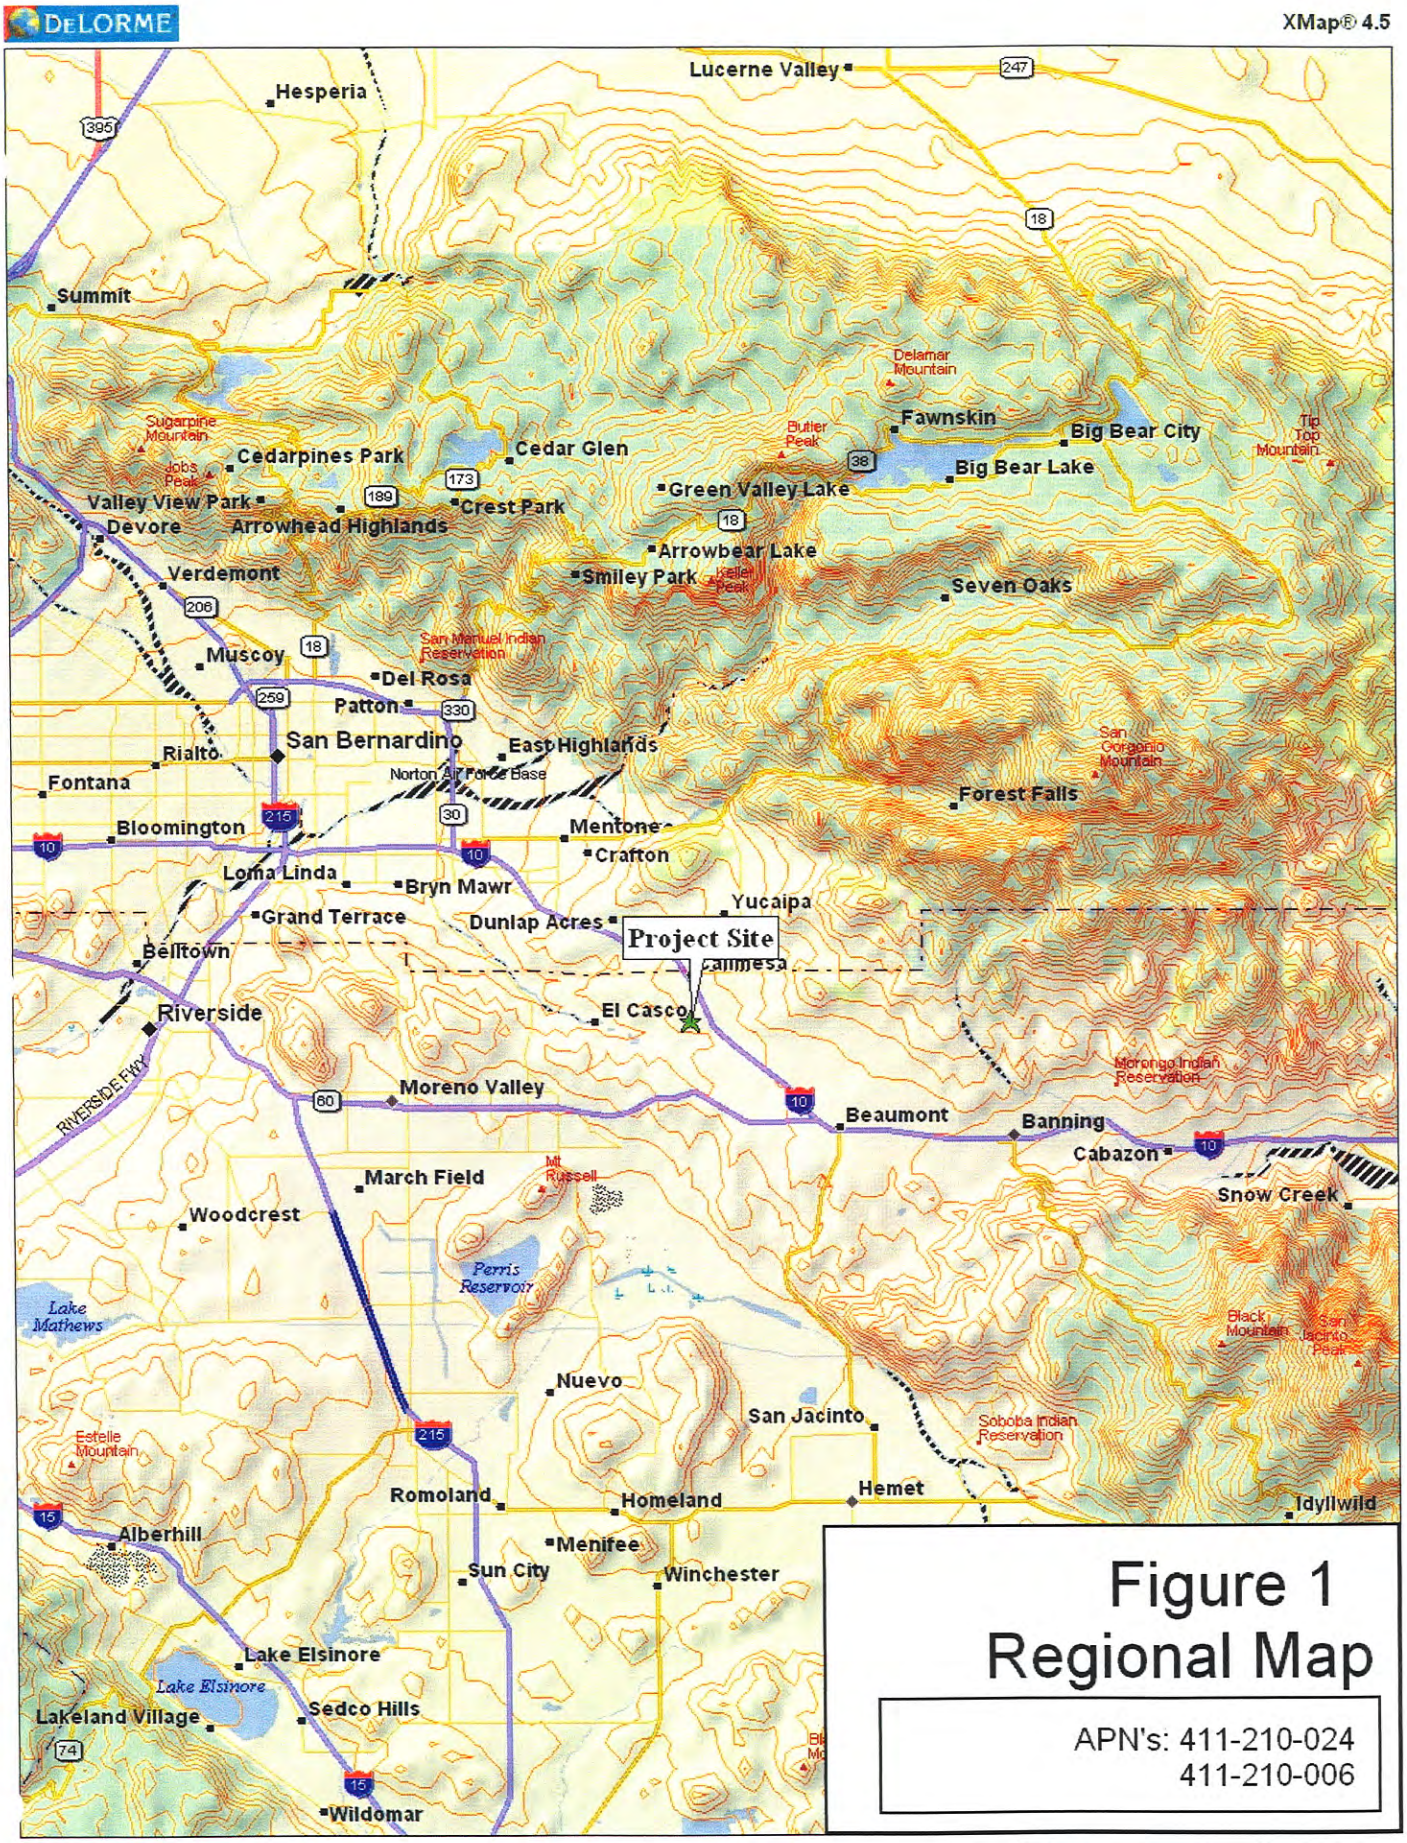
SECTION 4
AUTHORITY FOR THIS APPLICATION IS HEREBY GIVEN:

I certify that I am/we are the owner(s) of record or authorized agent and that the information filed is true and correct to the best of my knowledge. An authorized agent must submit a letter from the owner(s) indicating authority to sign the application on the owner's behalf. As the owner of record/authorized agent, I hereby authorize the information to be released to Property Owner(s)/Owner's Representative/authorized agent. I further authorize, pursuant to Government Code Section 65105, that County personnel, or their agents, may enter upon the subject property and make examinations and surveys, provided that the entry, examination, and survey do not interfere with the use of the land.

If the property is determined to be needed for partial or full inclusion in the Western Riverside County Multiple Species Habitat Conservation Plan ("MSHCP"), and if the 120-day negotiation period provided by Section 6.1.1(B)(2) of the MSHCP commences, then the Property Owner/Applicant authorizes the Regional Conservation Authority (RCA) or its agents to enter the property for appraisal purposes.

All signatures must be originals ("wet-signed"). Photocopies of signatures are **not** acceptable.



Henry Van Mouwerick	
PRINTED NAME OF PROPERTY OWNER(S)	*SIGNATURE OF PROPERTY OWNER(S)*
Pat Meyer	
PRINTED NAME OF PROPERTY OWNER REPRESENTATIVE	*SIGNATURE OF PROPERTY OWNER REPRESENTATIVE*

If the subject property is owned by persons who have not signed as owners above, attach a separate sheet that references the application case number and lists the printed names and signatures of all persons having an interest in the property.

**Please note: HANS cases are reviewed on a deposit-based method. Please refer to the appropriate fee schedule for deposit. Results of the HANS determination will be mailed to the Property Owner(s)/Owner's Representative.*

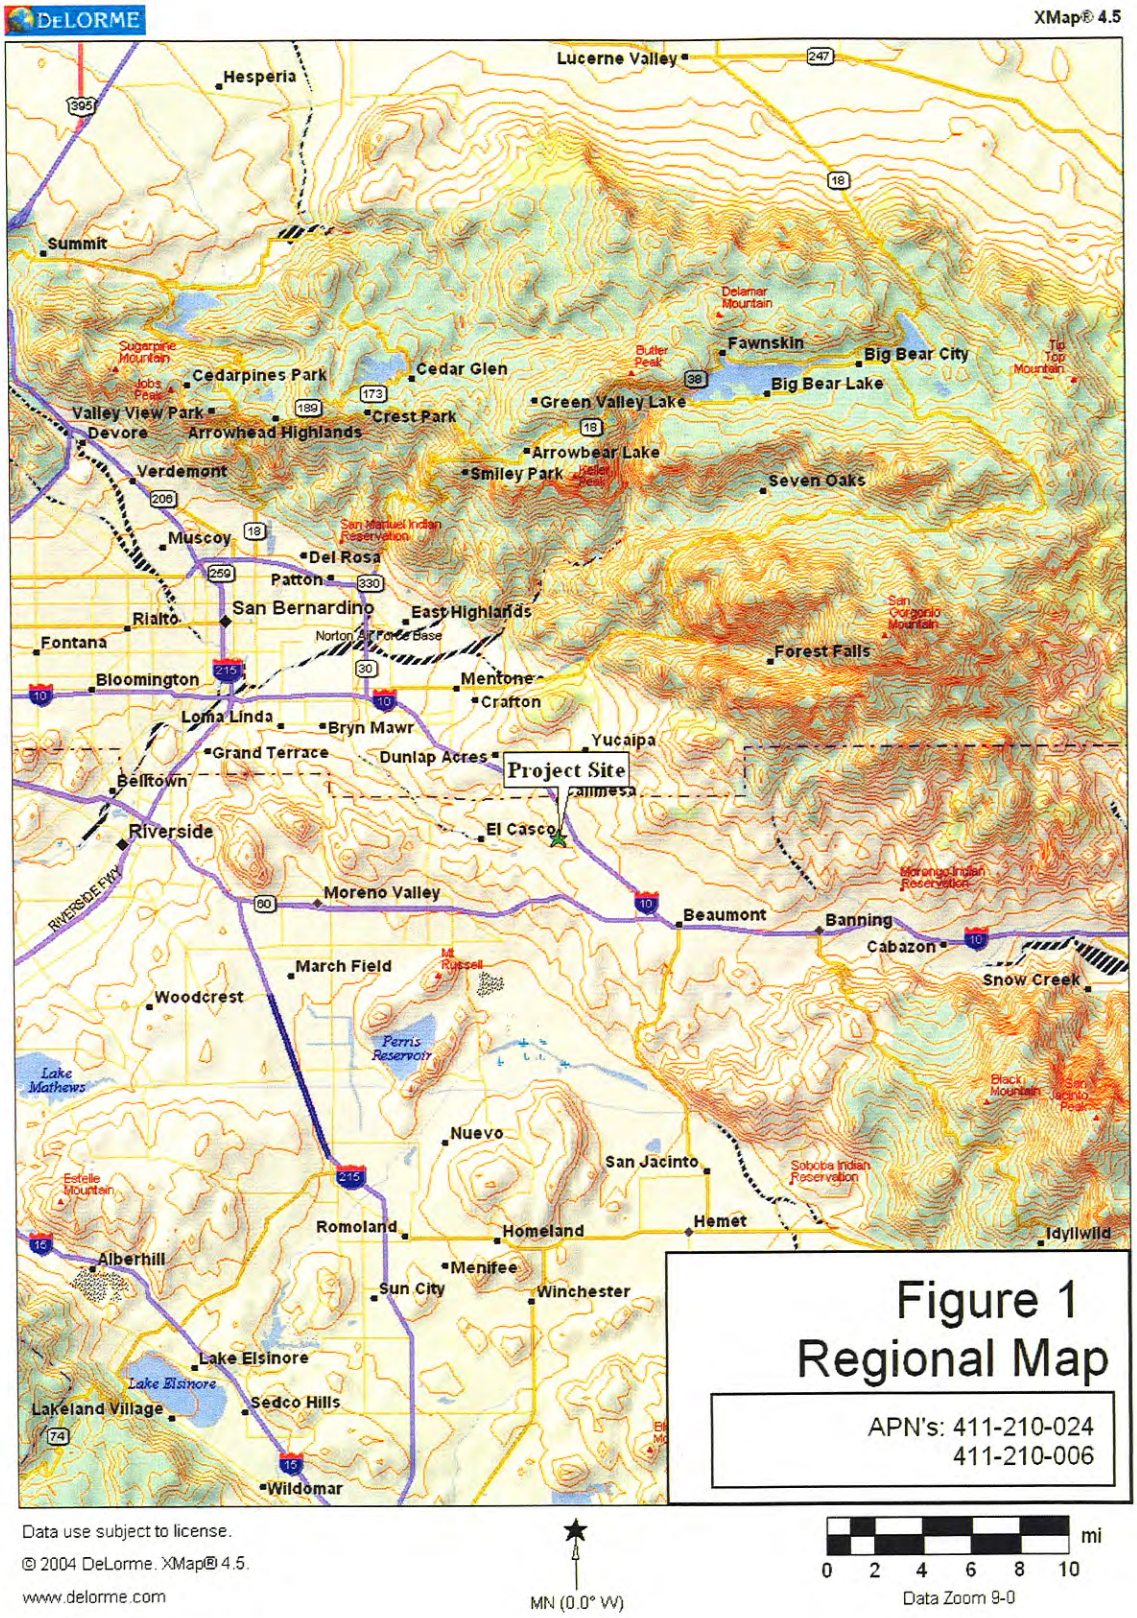
1.0 INTRODUCTION

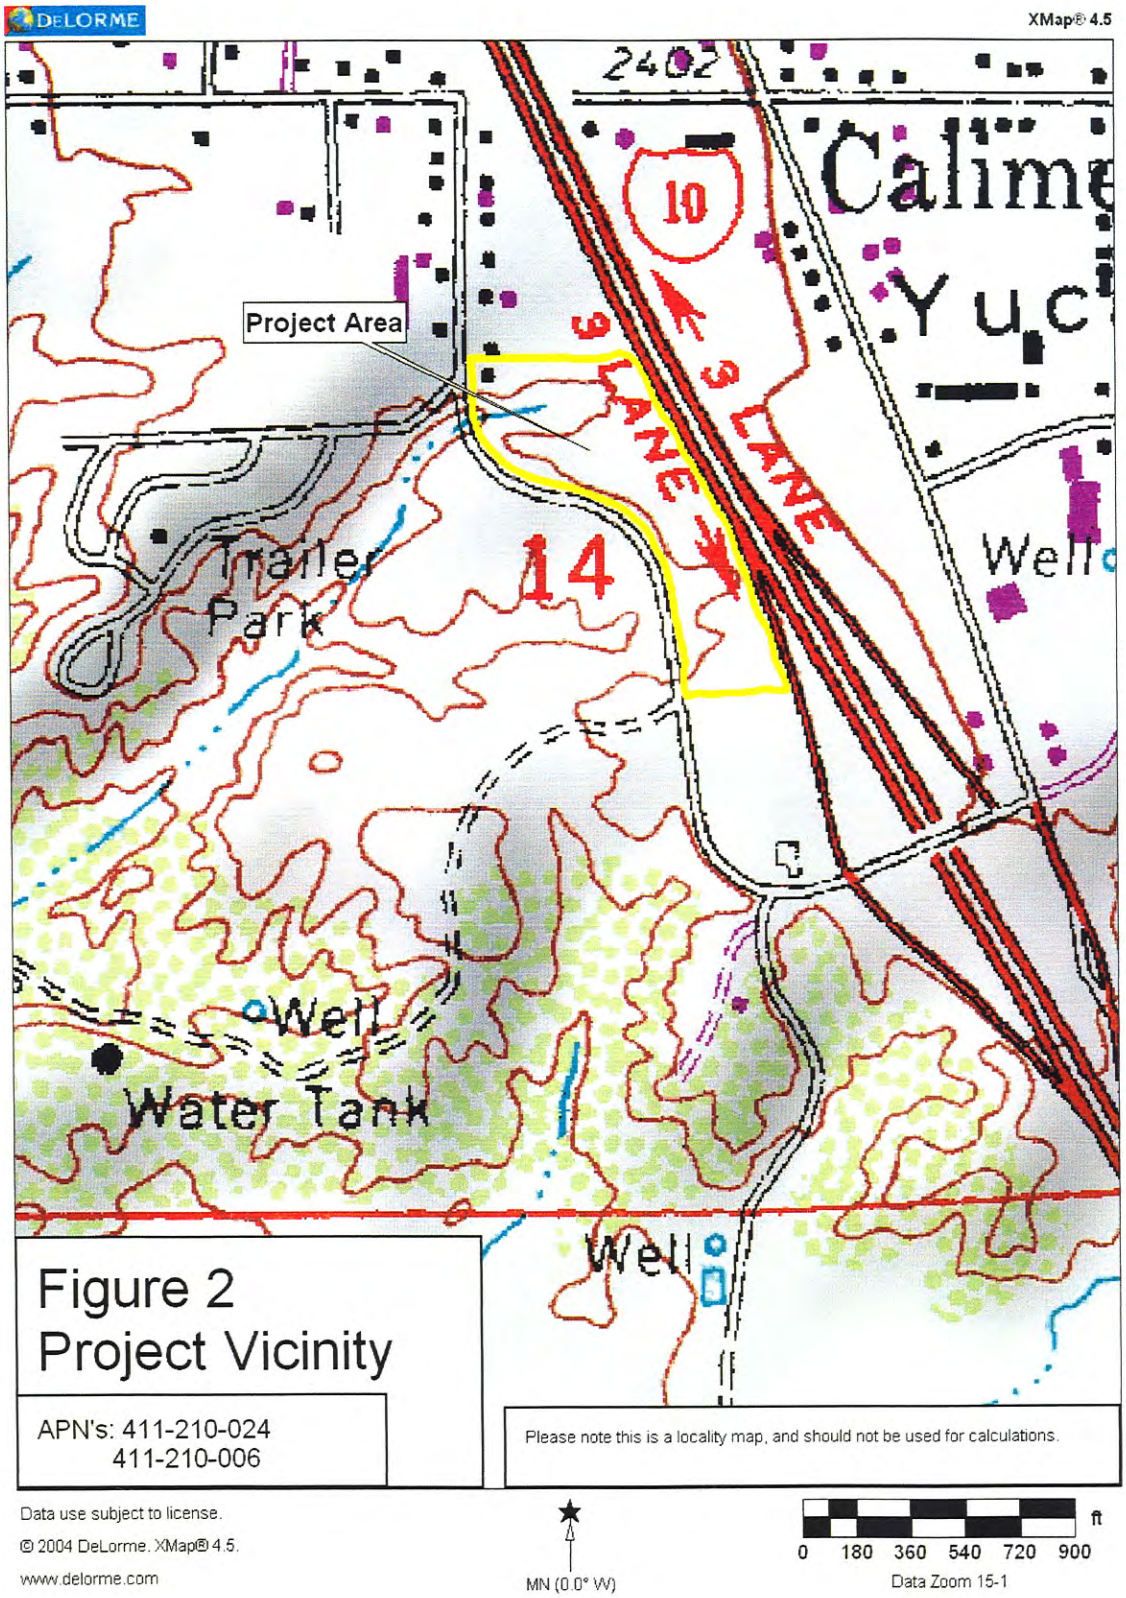
On behalf of Urban Environs, ECORP Consulting, Inc. (ECORP) conducted biological survey work for an approximately 10 acres (APNs 411-210-024 and -006) near the city of Calimesa, Riverside County, California. The property is located within the study area for the Western Riverside Multiple Species Habitat Conservation Plan (MSHCP) and is located within a Criteria Cell for conservation, within the Pass Area Plan. Because the property is located within a Criteria Cell, the project proponent will need to complete the Habitat Acquisition and Negotiation Strategy (HANS) process with the County of Riverside. This report has been prepared in support of the HANS application for the property.

Within the MSHCP, the property is subject to the Database Update/Additional Survey Requirements portion of the MSHCP (Section 6.3.2 and Errata) and is located within special survey areas for the burrowing owl (*Athene cunicularia*) and for two rare plant species: Yucaipa onion (*Allium marvinii*) and many-stemmed dudleya (*Dudleya multicaulus*). Surveys for these species were completed in 2006, as updated by a site visit in 2007. Every biological assessment of lands within the MSHCP must also comply with requirements to assess the potential for riparian/riverine areas, vernal pool habitats and fairy shrimp (Section 6.1.2). In addition, properties being submitted for HANS applications must comply with the Urban/Wildlands Interface Policies.

The following report describes the existing site conditions, survey methodologies, survey results and other information necessary for the project to enter into the Joint Project Review (JPR) by the Regional Conservation Authority (RCA).



1.1 Project Location



The project site is located on 10 acres along the east side of 7th Street, west of Interstate 10, north of Sandalwood Drive, and south of Villa Calimesa Lane in the City of Calimesa, Riverside County, California (Figure 1). As shown on the U.S. Geological Survey Yucaipa, California 7.5' topographic quadrangle (1979), the project area is

situated in the southeast corner of Section 14, Township 2 South, Range 2 West (Figure 2). The approximate center of the site is located at 33° 59.68' N, 117° 3.65' W (NAD83) within the within the Santa Ana Watershed (#18070203, U.S. Department of Interior, Geological Survey 1978). The elevation on site is approximately 713 to 722 meters (2,340 – 2,368 feet) above mean sea level (amsl).

1.2 Project Description

The proposed project consists of a Rough Grading Plan for the entire 10-acre site. No development project is planned for this site at this time, though the parcel is zoned for commercial development in the future. Approximately 15,680 cubic yards of soil would be moved as part of the grading operations. The proposed grading plan would not require the export or import of soil; the existing soils would be balanced on site.

2.0 METHODS

2.1 Literature Search

Prior to conducting the field portion of the assessment, a literature search was performed. A search of the California Department of Fish and Game's (CDFG) *California Natural Diversity Data Base* (CNDDB) was conducted to determine the special-status species that had been documented in the Yucaipa and El Casco 7.5' minute topographic quadrangles. Additional data regarding the potential occurrence of special-status species were gathered from the following sources:

- *State and federally listed endangered and threatened animals of California* (CDFG Oct. 2006),
- *Special animals list* (CDFG February 2007),
- *Inventory of rare and endangered vascular plants of California* (CNPS 2005),
- *The Jepson Manual* (Hickman 1993), and
- Various online websites (e.g., CalFlora 2006; California Native Plant Society Electronic Inventory 2006).

Using this information, localities were generated in particular for the two plant species that require survey work and burrowing owl, but also for other potentially-occurring species.

Plant and wildlife species nomenclature is derived from a variety of sources, such as: *Western Amphibians and Reptiles* (Stebbins 2003), *A Manual of California Vegetation (Sawyer and Keeler-Wolf 1995)*, *The Jepson manual* (Hickman 1993), *Preliminary Descriptions of the Terrestrial Natural Communities of California* (Holland 1986), and *The Sibley Guide to Birds* (Sibley 2000).

Soil types were determined using the *Soil Survey of San Bernardino County, Southwestern Part, California* (USDA 1979) and the online Natural Resource Conservation Service's Web Soil Survey.

2.2 Field Surveys

ECORP biologists Scott Taylor conducted the rare plant survey and general site assessment on May 23, 2006 and Scott Taylor, Tony Mann, and Danica Schaffer-Smith conducted burrowing owl surveys of the site between August 10 and 30, 2006. A follow-up survey was conducted in June 2007 by Scott Taylor to confirm that the site's resources and conditions had not changed in 2007. Information collected during the field surveys included:

- Recording all plant and animal species observed on the project site and in immediately adjacent areas;
- Characterizing plant communities present on the project site;
- Searching for animal sign (detections of burrows, scat, tracks, vocalizations, etc.);
- Taking photographs at the project site; and
- Recording weather data during surveys, including time, temperature, cloud cover, and wind speed at the start and end of the surveys (Table 1).

Table 1. Weather Conditions During Surveys

Date	Time		Temperature (°F)		Cloud Cover (%)		Wind Speed (m.p.h)	
	start	end	min	max	min	max	min	max
5/23/06	1330	1600	76	76	0	0	2	5
8/10/06	0630	0800	72	77	0	0	0	2
8/24/06	0530	0830	74	80	0	0	0	2
8/29/06	1835	1920	88	89	40	40	0	3
8/30/06	1820	1930	85	85	20	20	0	2
6/25/07	1000	1130	78	78	0	0	0	2

The rare plant survey consisted of walking the entire site carefully to search for the Yucaipa onion and many-stemmed dudleya. The areas considered to have the highest potential during the survey were native habitats within the non-disced portions of the property, so these areas received more attention.

The burrowing owl survey was conducted during the nesting season in accordance with the 2003 Burrowing Owl Consortium Guidelines and the 1995 CDFG Staff Report on Burrowing Owl Mitigation (CDFG 1995) guidelines. Parallel transects at 30 meter (100 feet) intervals were walked throughout potential habitat areas on and within 150 meters (500 feet) of the boundaries of the site. All burrows were inspected for presence of owls and owl sign (feathers, whitewash, and pellets). In the event that burrows and owl locations were detected, they would have been mapped utilizing a handheld Geographic Positioning System (GPS).

3.0 RESULTS

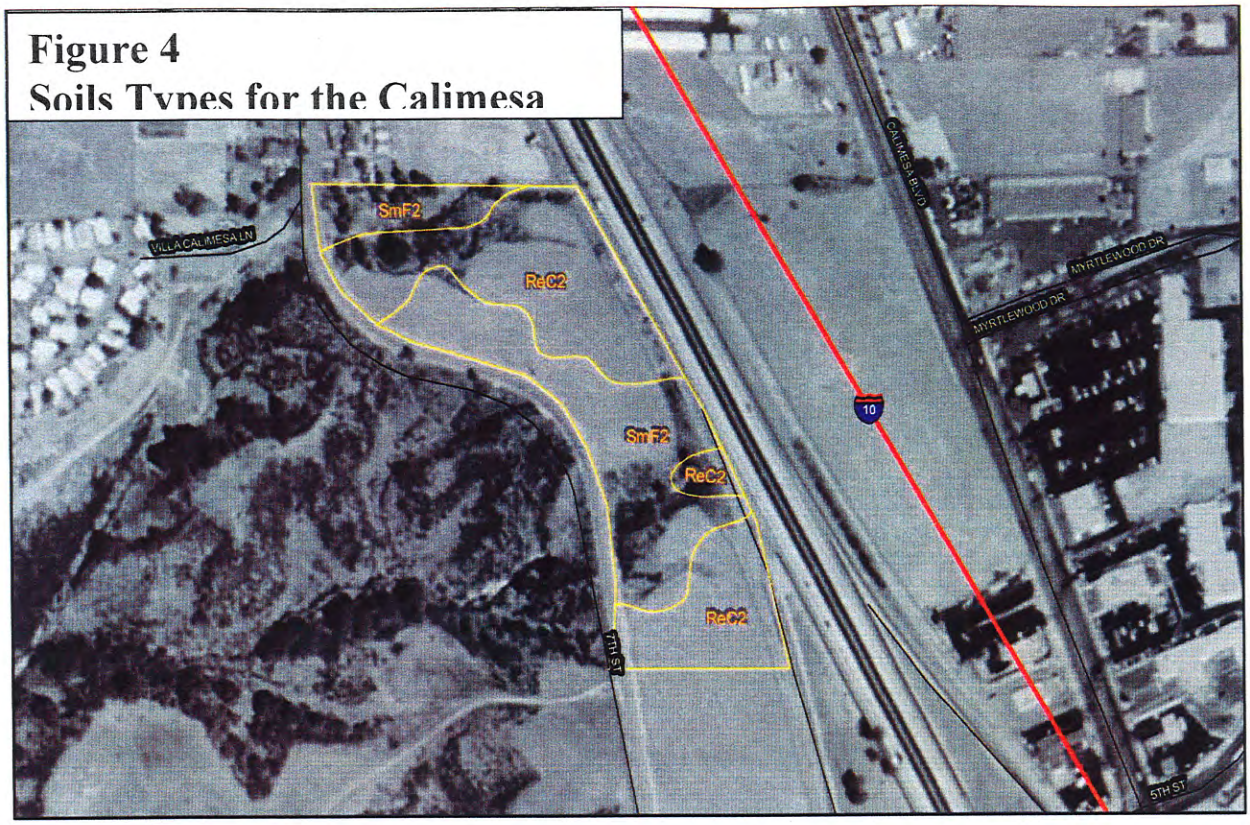
The results section summarizes the results of the literature search and field surveys, including site characteristics, plant communities, wildlife, special-status species, and special-status habitats (including any potential wildlife corridors).

3.1 Site Characteristics

The approximately 10-acre site is currently vacant. There is one stream and two drainages present on the site, with several oak trees along the drainages. The project site has been almost entirely disked and it has been plowed in the past. Adjacent parcels have been developed, with commercial use structures to the east, Interstate 10 to the north, and 7th street bordering the southern side of the property. The parcel south of the property features hills and canyons with non-native grassland habitats. Site photos are included as Figure 3.

3.2 Soils

The project site consists of soils known as Ramona very fine sandy loam (ReC2) and San Timoteo loam (SmF2) (Figure 4). Approximately 95 percent of the site consists of the Ramona very fine sandy loam soil type, while the remaining portion is the San Timoteo soil. The Ramona soils are composed of granite derived alluvial material, typical of alluvial fans or terraces. These soils are well-drained, with a high water capacity, and a low frequency of flooding. The upper portion of this soil type is very fine sandy loam about 14 inches thick. San Timoteo consists of weathered material from sandstone. On the project site, this soil is present on 25 to 50 percent slopes. This soil has a low available water capacity, but it is well drained with no frequency of flooding. Typically this soil has approximately 22 inches of loam in its upper layers, which is met by a lower layer of weathered bedrock about 6 inches deep. Elevations range between 1,700 to 3,100 feet (USDA, 1979).



Riversidean Sage Scrub in the southwest corner.
(APN: 411-210-024 and 411-210-006)

Non-native grassland as seen from the southeast corner.
(APN: 411-210-024 and 411-210-006)

Map Unit Legend Summary

Western Riverside Area, California

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
ReC2	Ramona very fine sandy loam, 0 to 8 percent slopes, ero ded	5.8	54.2
SmF2	San Timoteo loam, 25 to 50 percent slopes, eroded	4.9	45.8

3.3 Vegetation Communities and Plants

The primary plant communities in the project area are non-native grasslands, which receive periodic disking, and remnant agriculture. Outside of the remnant agriculture and grassland areas, scattered areas of Riversidean sage scrub including California buckwheat (*Eriogonum fasciculatum*) and California sagebrush (*Artemisia californica*) occur on slopes of the two larger drainage canyons. A single live oak tree (*Quercus agrifolia*) in the southwesternmost drainage course. In the central portuion of the property, a small copse of ornamental trees occurs, comprised of eucalyptus trees (*Eucalyptus* sp.) and pepper trees (*Schinus molle*).

Non-native grasslands are composed primarily of non-native species: bromes *(Bromus* spp.), short-pod mustard (*Hirschfeldia incana),* and filaree (*Erodium* spp.) occur over the majority of the site.

Riversidean sage scrub on site is comprised of California buckwheat primarily, but also contains a few toyon (*Heteromoles arbutifolia*) and basketbush (*Rhus trilobata*). The herbaceous understory is fairly well developed in this community, consisting primarily of herbs and forbs. Some of the understory plants include scarlet bugler (*Penstemon centranthifolius*), telegraph weed (*Heterotheca grandiflora*), tarweed (*Deinandra fasciculata*), wild brome (*Bromus* sp.) and wild oats (*Avena* sp.)

3.4 Waters and Wetlands

Surface water was not present on the site at the time of the surveys but the site does support one known stream and two other drainages. A formal wetland delineation was conducted by Gonzales Environmental Consulting, Inc. (GEC) and a report documenting the results was prepared by GEC (October 2005). No wetlands were found to exist on the site. One Stream (Stream A) was found at the west end of the site. Two drainage swells (Drainage 1 and 2), are located south of the channel. Drainage 2 is located in the extreme southern portion of the project area. Though there is standing water and cattails on the south end of the property, these features alone do not constitute the presence of a wetland; there are specific soil requirements that need to be met. The

soils present on the site and in the drainages are not considered wetland soils. The stream and drainage locations are shown on Figure 5 and described further below. The proposed grading plan has the potential to affect all of the jurisdictional areas.

3.4.1 State Jurisdictional Areas

California Department of Fish and Game, and California Regional Water Quality Control Board (Porter-Cologne) regulate impacts to bed, bank, channel, vegetation and waters of the state. The proposed project would impact 0.51 acres of Drainage 1, 0.13 acres of Drainage 2, and 0.48 acres of the stream (Gonzales 2005).

3.4.2 Federal Jurisdictional Areas

ACOE regulates discharge of fill into "waters of the US" including wetlands and non-wetland waters that meet specific criteria. ACOE jurisdictional areas include the three drainages that bisect the property. The proposed project would impact 0.22 acres of Drainage 1, 0.02 acres of Drainage 2, and 0.07 acres of the stream. The California Regional Water Quality Control Board has delegated authority from U.S. EPA to issue certifications for Section 401 of the Clean Water Act. The Section 401 impacts are the same as the federal jurisdictional areas.

3.5 Wildlife

Wildlife species observed or detected on the project site were characteristic of desert habitats and disturbed/ruderal communities in the region. There were no sensitive species detected during the survey. Wildlife species that were detected within the project area included barn owl (*Tyto alba*), American crow (*Corvus brachyrhynchos*), house finch (*Carpodacus mexicanus*), European starling (*Sturnus vulgaris*), American kestrel (*Falco sparverius*), wrentit (*Chamaea fasciata*), acorn woodpecker (*Melanerpes formicivorus*), desert cottontail (*Sylvilagus auduboni*), California ground squirrel (*Spermophilus beecheyi*), and side-blotched lizard (*Uta stanisburiana*).

In addition to direct species observations, there was evidence of other species present on the project site. There were many burrows on the property, which are probably used by small mammals. Mouse (*Peromyscus* sp.) and kangaroo rat (*Dipodomys* sp.) scat were both observed, with the kangaroo rat scat found near burrows in the undisked areas around the two drainages. There was also coyote (*Canis latrans*) scat present on the site.

3.6 Special-Status Species

The CNDDB and CNPSEI did not contain any documented occurrences of special-status species on the project site (CNDDB 2006; CNPSEI 2006). Based on the search of these databases and the habitats present on the site, 29 special-status species (6 plant species and 23 wildlife species) have been documented within the Yucaipa and El Casco quadrangles. Each of these species was assessed for their potential to occur on site in Appendix A.

According to the MSHCP (Section 6.1.2), properties that support vernal pool habitat or riparian/riverine habitat must be assessed on a property by property basis for the potential to support three sensitive species of fairy shrimp and three sensitive riparian bird species, respectively. Vernal pool habitat does not occur on the property and so there is no potential for the property to support the fairy shrimp species, which include Riverside fairy shrimp (*Streptocephaleus wootonii*), vernal pool fairy shrimp (*Branchinecta lynchi*), and Santa Rosa Plateau fairy shrimp (*Linderiella santarosae*).

There are no areas that qualify under the definition of MSHCP riparian/riverine areas on the property. The definition states that riparian/riverine areas are those that "contain habitat dominated by trees, shrubs, persistent emergents, or emergent mosses and lichens, which occur close to or which depend upon soil moisture from a nearby fresh water source; or areas with fresh water flow during all or a portion of the year." The property has no potential to support the aforementioned riparian bird species, which include least Bell's vireo (*Vireo bellii pusillus*), southwestern willow flycatcher (*Empidonax traillii extimus*), and western yellow-billed cuckoo (*Coccyzus americanus occidentalis*).

Removal of the Oak tree on the property would require an Oak Tree Removal Permit from the City of Calimesa.

3.6.1 Required Special-Status Species Surveys

The primary guidance as to effects on candidate, sensitive, or special status species is the MSHCP, which permits take of 146 plant and animal species so long as there is compliance with the plan. The MSHCP specifies survey requirements for the property as discussed below.

According to the MSHCP (Volume 1, Sections 6.1 and 6.3), the property is within two special survey areas: Narrow Endemic Plant Species Survey Area (NEPSSA) 8 and the Burrowing Owl Survey Area. A rare plant survey is required within NEPSSA 8 for two plant species: Yucaipa onion (*Allium marvinii*) and many-stemmed dudleya (*Dudleya multicaulus*). A burrowing owl survey is only required for properties within the survey area that also support potential owl habitat.

Surveys were completed for the two plant species and neither species were found on the property. The site conditions and habitats onsite are also not considered to be ideal for these two species. Yucaipa onion tends to occur in openings in thick chaparral and is largely found at higher elevations than the project site. Many-stemmed dudleya generally requires clay soil types, which are absent from the property.

Yucaipa onion (*Allium marviniii*) is a CNPS List 1B.1 perennial bulbiferous herb historically found in chaparral (with clay openings) at elevations ranging from 760 to 1065 meters (2,493 – 3,494 feet) above mean sea level (amsl). This species is unlikely to occur on site because no chaparral habitat exists and focused CNPS (2001) protocol surveys (during the blooming period) did not detect this species on the project site.

Many-stemmed dudleya (*Dudleya multicaulis*) is a CNPS List 1B.2 perennial herb historically found in chaparral, coastal scrub, and valley and foothill grasslands (often clay) at elevations ranging from 15 to 790 meters (49 – 2,592 feet) amsl. This species is unlikely to occur on site because although the drainages on the property contain coastal scrub habitat and is within the plant's elevation range, this plant would have

likely been observed, if present, during focused CNPS (2001) protocol surveys (during the blooming period).

The property supports potential habitat for the burrowing owl and is within the Burrowing Owl Survey Area, therefore surveys for the owl were completed for the property; no burrowing owls were found.

The burrowing owl (*Athene cunicularia*) is a California Species of Concern (CSC) species. Burrowing owls historically occurred throughout much of California; however, many former populations have vanished. The burrowing owl is a yearlong resident in California that inhabits open habitats, primarily grasslands and deserts. Some over-wintering burrowing owls also occur in California, but do not stay and breed during the spring and summer seasons like their resident counterparts. Burrowing owls require a burrow for roosting and nesting cover. Although they usually nest in abandoned ground squirrel burrows, they will also use other small mammal burrows, pipes, culverts, and nest boxes, particularly where burrows are scarce (Zeiner, et al. 1990).

During the surveys for the burrowing owl, kangaroo rat (*Dipodomys* sp.) sign was observed on the property. This sign could be attributable to the Stephens' kangaroo rat (*Dipodomys stephensi*), a species which is a state and federal listed species. This species is authorized for take under the MSHCP, due to adoption of a Habitat Conservation Plan (HCP) for the species in 1991. Since the property is outside of the HCP fee area, and because of the provisions of the MSHCP regarding this species, no action is required on the property with regard to the Stephens' kangaroo rat.

3.6.2 Raptors and Migratory Birds

All raptor species are protected from "take" pursuant to California Fish and Game Code Section 3503.5. Raptors and migratory birds are protected by the Migratory Bird Treaty Act (MBTA 1918). Nesting habitats for raptors is present on site in the oak trees, as well as in openings to the steep drainage slopes. One adult barn owl was observed foraging on the site, and could potentially be roosting there as well.

3.7 MSHCP Preserve

The property is located within Criteria Cells 323 and 326 (Figure 6). These cells focus conservation in the southern half primarily, associated with a side tributary to San Timoteo Canyon.

The MSHCP planned wildlife corridor through the region, in a side tributary to San Timoteo Canyon, is known as Proposed Constrained Linkage 23 in the MSHCP. This linkage is planned to provide connectivity between Bogart Park and San Timoteo Creek for several wildlife species such as Bell's sage sparrow (*Amphispiza belli belli*), Los Angeles pocket mouse (*Perognathus longimembris brevinasus*), bobcat (*Lynx rufus*), and San Bernardino mountain kingsnake (*Lampropeltus zonata parvarubra*). Assemblage of this corridor is planned by conserving 5-15 percent of Cell 323 and 5 percent of Cell 326, configured in such a way that the preserved areas are joined in functionality. The area identified for preservation is approximately one half mile south of the subject property.

The project site is bordered on the east by Interstate 10 and commercial development, on the west by 7th Street, on the north by commercial/residential developments, and on the south by commercial developments. Across 7th Street to the west there is a complex of canyons that lead to San Timoteo Canyon, and the site is connected with this area via culverts within two of the drainages. The continuity of the drainage features under 7th Street does not constitute a substantial wildlife corridor. Although the drainages on the property would be eliminated with rough grading, this action would not interfere substantially with movement of any resident or migratory fish or wildlife species.

The requirements for Urban/Wildlands Interface for the management of edge factors would apply to this property. Primarily, these measures would entail prevention of unfiltered runoff and siltation to the west into tributaries of San Timoteo Canyon. No development is planned at this time, and so factors such as such as lighting, exotic species invasion, toxics, and domestic predators would not apply at this stage of the project.

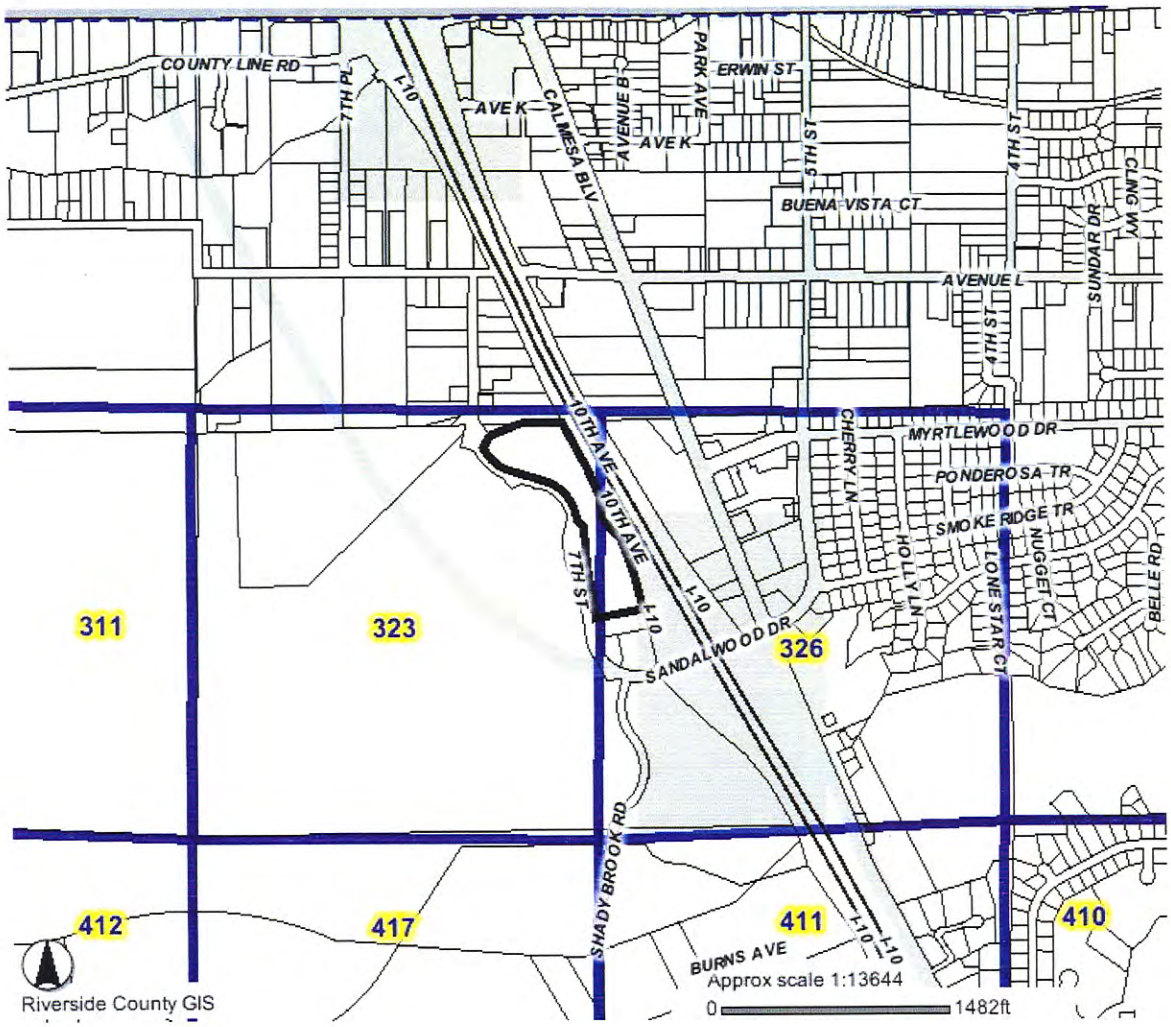

Figure 6
MSHCP Criteria Cells

4.0 CONCLUSIONS AND RECOMMENDATIONS

4.1 Conclusions

Surveys were completed for the two plant species requiring focused surveys, Yucaipa onion and many-stemmed dudleya, and neither species were found on the property. The property supports potential habitat for the burrowing owl and is within the Burrowing Owl Survey Area, therefore surveys for the owl were completed for the property; no burrowing owls were found.

There are three drainages on the property that are jurisdictional to federal and state agencies that will be impacted by the grading. The completion of the grading project will also impact the coastal sage scrub and coast live oak woodland, both considered to be sensitive natural communities. Actions that impact the drainages and the oak trees require appropriate permits, as described below.

Non-vegetated streambeds would be impacted by the proposed project, and would represent a significant impact requiring permitting with the appropriate agencies. One stream and two drainages are located within the project site and are under federal and state jurisdiction. The proposed rough grading plan has the potential to affect all of the jurisdictional areas.

Since the property is within criteria cells, a Habitat Evaluation and Acquisition Negotiation Strategy (HANS) application is being processed through the County of Riverside's Environmental Programs Department. The HANS process would determine compliance of the proposed project with the MSHCP. Due to the target conservation within the criteria cells containing the property, and because the NEPSSA target species for the property are absent, it is anticipated that the HANS process would determine that the proposed action would be consistent with the goals of the MSHCP.

4.2 Recommendations

Nesting migratory birds and burrowing owls are protected by the federal Migratory Bird Treaty Act. Seasonal avoidance of the bird nesting season (March 1 to August 31) is recommended in order to avoid take of nesting birds and burrowing owls. A pre-clearance bird survey by a qualified biologist is recommended if activities are to begin during the bird nesting season (March 1 to August 31). This survey should be conducted within 30 days prior to rough grading of the property. If burrowing owls or other nesting birds are found, appropriate mitigation measures must be conducted in accordance with the MSHCP and MBTA requirements.

The City of Calimesa municipal code contains tree preservation regulations, along with specific regulations regarding removal of oak trees. The property has at least one eucalyptus tree and several oak trees. The Applicant would be required to obtain an Oak Tree Removal Permit. For impacts to coastal sage scrub, no mitigation would be required other than compliance with the MSHCP through the aforementioned survey work and the HANS process.

A U.S. Army Corps of Engineers permit (404), California Department of Fish and Game Streambed Alteration Agreement (1600), and California Regional Water Quality Control Board Water Quality Certification (401/402) will be required prior to beginning work in the drainage areas. Final authority over the area rests with the appropriate agencies.

To meet requirements of the Urban/Wildlife Interface Policies of the MSHCP, the project would need to acquire a Storm Water Pollution and Prevention Plan and National Pollutant Discharge Elimination System permit prior to rough grading. At the time any development is planned on the property in the future, there will be further measures to meet, including meeting with MSHCP specifications regarding: drainage, toxic material controls, lighting within open space, noise control, control of invasive plants and fencing/barrier design.

5.0 CERTIFICATION

I hereby certify that the statements furnished above and in the attached exhibits present the data and information required for this biological evaluation, and that the facts, statements, and information presented are true and correct to the best of my knowledge and belief. Field work conducted for this assessment was performed by me or under my direct supervision. I certify that I have not signed a non-disclosure or consultant confidentiality agreement with the project applicant or applicant's representative and that I have no financial interest in the project.

DATE: 07/30/07

Appendix A

Potentially Occurring Special-Status Species

APPENDIX A
Potentially Occurring Special-Status Species on the Calimesa Property

PLANTS			
Scientific Name Common Name	**Status**	**Flowering Period**	**Potential of Occurrence**
Allium marvinii Yucaipa onion	Fed: None CA: None CNPS: 1B.1 WRMSHCP: Yes	Apr-May	Unlikely; the property is slightly below the plant's elevation range (760-1065 meters). Also, this plant would have likely been observed, if present, during spring 2006 plant surveys.
Calochortus plummerae Plummer's mariposa lily	Fed: None CA: None CNPS: 1B.2 WRMSHCP: Yes	May-Jul	Unlikely; the property contains suitable habitat for this species [valley and foothill grasslands (granitic or rocky)] and is within the plant's elevation range (100-1700 meters). There are five known occurrences within five miles of the project site. However, this plant would have likely been observed, if present, during spring 2006 plant surveys.
Chorizanthe parryi* var. *parryi Parry's spineflower	Fed: None CA: None CNPS: 3.2 WRMSHCP: Yes	Apr-Jun	Unlikely; the property contains suitable habitat for this species (coastal scrub with sandy or rocky openings) and is within the plant's known range (40-1705 meters). There is one known occurrence within five miles of the project site. However, this plant would have likely been observed, if present, during spring 2006 plant surveys.
Dudley multicaulis many-stemmed dudleya	Fed: None CA: None CNPS: 1B.2 WRMSHCP: Yes	Apr-Jul	Unlikely; the property contains suitable habitat for this species [coastal scrub; valley and foothill grassland (often clay)] and is within the plant's elevation range (15-790 meters). Also, this plant would have likely been observed, if present, during spring 2006 plant surveys.
Monardella macrantha* ssp. *hallii Hall's monardella	Fed: None CA: None CNPS: 1B.3 WRMSHCP: Yes	Jun-Aug	Unlikely; the property contains suitable habitat for this species (valley and foothill grassland), but it is slightly below the plant's elevation range (730-2195 meters). The closest known occurrence is approximately eight miles north of the project site.
Symphyotrichum defoliatum San Bernardino aster	Fed: None CA: None CNPS: 1B.2 WRMSHCP: No	Jul-Nov	Unlikely; the property does not contain suitable habitat for this species [vernally mesic, valley and foothill grasslands (near ditches, streams, or springs)], but it is within the plant's elevation range (2-2040 meters). There is one known occurrence within five miles of the project site.

WILDLIFE		
Scientific Name Common Name	**Status**	**Habitat**
AMPHIBIANS		
Spea hammondii western spadefoot	Fed: None CA: CSC WRMSHCP: Yes	Low; there is marginal habitat (grasslands and sandy soils with nearby low hills), but no sightings occur within five miles of the site.
REPTILES		
Aspidoscelis hyperythra orange-throated whiptail	Fed: None CA: CSC WRMSHCP: No	Low; there is marginal habitat (grassland, riparian scrub, woodlands) on the site, but no occurrences are documented within five miles of the property.
Aspidoscelis tigris stejnegeri Coastal western whiptail	Fed: None CA: None WRMSHCP: No	Moderate; there are friable desert soils on the site, and there are nearby documented sightings, but the species was not observed during surveys.
Phrynosoma coronatum* ssp. *blainvillei (San Diego) coast horned lizard	Fed: None CA: CSC WRMSHCP: Yes	Moderate; there is marginal habitat for the species (sandy soils) and documented sightings occur within five miles of the property.
BIRDS		
Accipiter cooperi Cooper's hawk	Fed: MBTA CA: CSC, FP WRMSHCP: Yes	Moderate; marginal oak woodland is present on the site.
Agelaius tricolor tricolored blackbird	Fed: None CA: CSC WRMSHCP: Yes	Low; None of the preferred marsh, playa, or vernal pool, or moist grassland habitat is present on site. Sightings have been documented within five miles of the site, but species was not observed during the survey.
Aimophila ruficeps canescens southern California rufous-crowned sparrow	Fed: None CA: CSC WRMSHCP: Yes	Low; although sightings have been documented within five miles of the site, there is only poor secondary habitat (grassland and chaparral) present. Not observed during surveys.
Aquila chrysaetos golden eagle	Fed: MBTA CA: CSC, FP WRMSHCP: Yes	Moderate; there is marginal grassland and oak woodland habitat present on the site. This species is known to occur within five miles of the project site.
Athene cunicularia burrowing owl	Fed: None CA: CSC WRMSHCP: Yes	Low; There are no known sightings within five miles of the site, but there is suitable open grassland, habitat and small mammal burrows on site. Species was not observed during the focused protocol surveys.
Circus cyaneus Northern harrier	Fed: MBTA CA: CSC, FP WRMSHCP: Yes	Moderate; suitable habitat for this species occurs on the project site (grassland, agricultural fields, and coastal sage scrub). This species is known to occur within five miles of the project site.

Elanus leucurus white-tailed kite	Fed: MBTA CA: FP WRMSHCP: Yes	Moderate; there are open grassland areas suitable for foraging, as well as small mammals present on the site. Marginal oak woodland breeding habitat is also present.
Empidonax traillii extimus southwestern willow flycatcher	Fed: **END** CA: **END** WRMSHCP: Yes	Low; there is marginal woodland habitat on the property. Species was not observed during surveys.
Eremophila alpestris actia California horned lark	Fed: None CA: CSC WRMSHCP: Yes	Low; there is marginal grassland present on the site, but no moist areas. Sightings have been documented within five miles of the property.
Lanius ludovicianus loggerhead shrike	Fed: BCC CA: CSC WRMSHCP: Yes	Moderate; suitable habitat is present on the project site (inhabits large, open areas conducive to hunting-nests in dense brush and shrubs).
Plegadis chihi white-faced ibis	Fed: None CA: CSC WRMSHCP: Yes	Low; there are no pool areas and only marginal secondary habitat (grassland and woodland) habitat present on site. No known sightings occur within five miles of the site, and the species was not observed during surveys.
Vireo bellii pusillus least Bell's vireo	Fed: **END** CA: **END** WRMSHCP: Yes	Low; no suitable lowland riparian willow or scrub habitat is present on site, but the species has been documented within five miles of the property.
MAMMALS		
Chaetodipus fallax fallax northwestern San Diego pocket mouse	Fed: None CA: CSC WRMSHCP: Yes	Moderate; marginal grassland is present on the site. This species has been found within five miles of the project site.
Dipodomys merriami parvus San Bernardino kangaroo rat	Fed: **END** CA: None WRMSHCP: Yes	Low; there is marginal grassland habitat on the property. This species has not been documented within five miles of the site.
Dipodomys stephensii Stephens' kangaroo rat	Fed: **END** CA: **THR** WRMSHCP: Yes	High; there are soft soils with sparse grasses present on the site, and there are documented sightings within five miles of the property. Kangaroo rat skat and burrows were identified on the site during the surveys.
Lasiurus xanthinus Western yellow bat	Fed: None CA: None WRMSHCP: No	Low; the site lacks preferred roosting trees and permanent water, required for foraging. Sightings have been documented within five miles of the property.
Lepus californicus bennettii San Diego black-tailed jackrabbit	Fed: None CA: CSC WRMSHCP: Yes	Low; there is marginal grassland and scrub habitat on the property. There is one documented sighting within five miles of the site.

Onychomys torridus ramona southern grasshopper mouse	Fed: None CA: CSC WRMSHCP: No	Moderate; there is suitable open area with grasses, and sandy soils on the site. Sightings have been documented within five miles of the site.
Perognathus longimembris brevinasus Los Angeles pocket mouse	Fed: None CA: CSC WRMSHCP: Yes	Low; marginal grassland and scrub habitat is present on the site. There are no sightings known within five miles of the site.

Potential for Occurrence Criteria:

Present: Species was observed on site during a site visit or focused survey.

High: Habitat (including soils and elevation factors) for the species occurs on site and a known occurrence has been recorded within 5 miles of the site.

Moderate: Either habitat (including soils and elevation factors) for the species occurs on site and a known occurrence occurs within the database search, but not within 5 miles of the site; or a known occurrence occurs within 5 miles of the site and marginal or limited amounts of habitat occurs on site.

Low: Limited habitat for the species occurs on site and a known occurrence occurs within the database search, but not within 5 miles of the site, or suitable habitat strongly associated with the species occurs on site, but no records were found within the database search.

Unlikely: Species was found within the database search, but habitat (including soils and elevation factors) do not exist on site or the known geographic range of the species does not include the survey area.

California Native Plant Society (CNPS) designations: (Note: According to CNPS [Skinner and Pavlik 1994], plants on Lists 1B and 2 meet definitions for listing as threatened or endangered under Section 1901, Chapter 10 of the California Fish and Game Code).

1A: Plants presumed extinct in California
1B: Plants rare and endangered in California and throughout their range.
2: Plants rare, threatened or endangered in California but more commons elsewhere in their range.
3: Plants about which we need more information; a review list.
4: Plants of limited distribution; a watch list.

List 1B, 2, and 4 extension meanings:
.1 Seriously endangered in California (over 80% of occurrences threatened / high degree and immediacy of threat)
.2 Fairly endangered in California (20-80% occurrences threatened)
.3 Not very endangered in California (<20% of occurrences threatened or no current threats known)

Federal Designations
(Federal Endangered Species Act, USFWS)
END: federal-listed, endangered
THR: federal-listed, threatened
MTBA: listed under the Migratory Bird Treaty Act
BCC: Birds of Conservation Concern

State designations:
(California Endangered Species Act, CDFG)
END: state-listed, endangered
THR: state-listed, threatened
FP: fully protected
CSC: California Special Concern

Western Riverside Multiple Species Habitat Conservation Plan (WRMSHCP) designations: (Note: This plan was adopted on June 17, 2003).
Yes: Covered species on the WRMSHCP
No: Not a covered species on the WRMSHCP

Plant Species Observed

Family	Scientific Name	Common Name
EUDICOTS		
Anacardiaceae	*Schinus molle**	Peruvian pepper tree
Asteraceae	*Amsinckia intermedia*	Rancher's fiddleneck
	Baccharis salicifolia	mule fat
	*Centaurea melitensis**	tocalote
	Encelia farinosa	brittlebush
	Erigeron canadensis	horseweed
	Helianthus annus	common sunflower
	Heterotheca grandiflora	telegraph weed
	*Lactuca serriola**	prickly lettuce
	Malacothrix saxatilis	cliff aster
	Sonchus asper	prickly sow thistle
	Stephanomeria sp.	wire lettuce
Brassicaceae	*Hirschfeldia incana**	short-pod mustard
	*Raphanus sativus**	wild radish
Chenopodiaceae	*Salsola tragus**	Russian thistle
Convolvulaceae	*Convolvulus arvensis**	field bindweed
Euphorbiaceae	*Croton setigerus*	dove weed
	Euphorbia polycarpa	smallseed sandmat
Fabaceae	*Lupinus bicolor*	miniature lupine
	*Medicago polymorpha**	burclover
Geraniaceae	*Erodium brachycarpum**	short-beak filaree
	*Erodium cicutarium**	redstem filaree
Malvaceae	*Malva parviflora**	cheeseweed
Myrtaceae	*Melaleuca citrina**	bottlebrush
Polygonaceae	*Polygonum aviculare**	prostrate knotweed
Salicaceae	*Salix gooddingii*	Goodding's black willow
Sapindaceae	*Koelreuteria bipinnata**	goldenrain tree
Solanaceae	*Datura wrightii*	jimson weed
	*Nicotiana glauca**	tree tobacco
Tamaricaceae	*Tamarix ramosissima**	tamarisk
MONOCOTS		
Arecaceae	*Washingtonia filifera**	California fan palm
Poaceae	*Avena barbata**	slender oat
	*Avena fatua**	wild oats
	*Bromus diandrus**	common ripgut grass
	*Bromus rubens**	red brome
	*Cynodon dactylon**	Bermuda grass
	*Hordeum vulgare**	common barley
	*Phleum pratense**	common timothy

* Non-native species

Mr. Jack Kofdarali
Sandalwood Travel Center, LP
P.O. Box 1958
Corona, CA 92878

Subject: 2024 Burrowing Owl (*Athene cunicularia*) Survey Report for the Sandalwood Commercial Development Project and Finance Map

Dear Mr. Kofdarali:

This letter report presents the results of the 2024 focused burrowing owl (*Athene cunicularia;* BUOW) survey conducted by HELIX Environmental Planning, Inc. (HELIX) for the Sandalwood Commercial Development Project and Finance Map (project) located in the City of Calimesa, Riverside County (County), California. The survey was conducted in accordance with the County's BUOW Survey Instructions for the Western Riverside Multiple Species Habitat Conservation Plan (MSHCP).[1] This survey was conducted to meet applicable conditions under the MSHCP, which was approved in 2003.[2] The MSHCP is a comprehensive planning effort that includes multiple cities throughout Riverside County, including the City of Calimesa. As part of the MSHCP implementation, enrolled jurisdictions are required to impose terms of the MSHCP, including appropriate surveys in accordance with Volume 1, Section 6. The project is located within the MSHCP BUOW Survey Area; therefore, surveys are required if suitable habitat is present. This letter report describes the methods used to perform the survey and the survey results.

PROJECT SITE LOCATION

The project site is generally located west of Interstate (I-) 10 and north of Sandalwood Drive (Figure 1, Regional Location). The project site is within Section 14 of Township 2 South, Range 2 West on the U.S. Geological Survey (USGS) 7.5' El Casco quadrangle (Figure 2, USGS Topography). The project site is bordered by 7th Street to the west and I-10 to the east (Figure 3, Aerial Photograph). It is located approximately 400 feet to the north of the intersection of 7th Street and Sandalwood Drive. The

Environmental Programs Department. Retrieved from: https://www.wrc-rca.org/species/survey_protocols/burrowing_owl_survey_instructions.pdf. Accessed August 21, 2024.

[2] Riverside, County of. 2003. Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) Final MSHCP Volume I. Prepared by Dudek & Associates. Available from: https://rctlma.org/western-riverside-county-multiple-species-habitat-conservation-plan-mshcp-1. Accessed August 21, 2024.

approximate 11.2-acre project site consists of a 9.3-acre on-site area, which includes Assessor's Parcel Numbers 411-210-006 and -024, plus an additional 1.9-acre off-site right-of-way.

PROJECT SITE DESCRIPTION

The project site has been used for agriculture since at least 1938.[3] The project site was graded in 2009 and is currently dominated by wild oats and annual brome grasslands, which appear to be maintained regularly. The topography within the project site is mostly flat, with elevations ranging from approximately 2,380 feet (725 meters) above mean sea level (AMSL) near the northwestern portion of the project site to approximately 2,400 feet (725 meters) above AMSL near the southwestern corner. Immediate surrounding land uses mostly consist of undeveloped land to the west and commercial, industrial, and residential developments to the north, south, and east (Figure 3).

Representative photographs of the project site are depicted in Attachment A, *Representative Site Photos*.

METHODS

HELIX biologist Cache Tucker conducted a Step I Habitat Assessment on June 24, 2024. Mr. Tucker and HELIX biologist Nelly Moreno conducted the Step II Locating Burrows and BUOW, including Part A: Focused Burrow Surveys and Part B: Focused BUOW Survey, between June 24 and August 7, 2024, in accordance with the County's survey protocol. The Step I survey and first Step II survey were conducted on the same day. The specific survey information is provided in Table 1, *Survey Information*. The Step I and Step II surveys are described in detail below.

Table 1
SURVEY INFORMATION

Site Visit	Survey Date	Biologists	Start/Stop Time	Start/Stop Weather Conditions	Survey Results
HA[1]/1	06/24/24	Cache Tucker	0550-0740	68°F, wind 2-4 mph, 0% clouds 73°F, wind 2-4 mph, 0% clouds	Suitable habitat and burrows detected; no BUOW detected.
2	07/12/24	Cache Tucker	0600-0750	68°F, wind 0-2 mph, 80% clouds 78°F, wind 1-4 mph, 80% clouds	No BUOW detected.
3	07/24/24	Cache Tucker	0550-0750	72°F, wind 02 mph, 5% clouds 75°F, wind 0-5 mph, 5% clouds	No BUOW detected.
4	08/07/24	Nelly Moreno	0600-0750	72°F, wind 1-5 mph, 60% clouds 77°F, wind 1-5 mph, 50% clouds	No BUOW detected.

[1] Step I Habitat Assessment

Step I – Habitat Assessment

The project site is located within an MSHCP BUOW survey area; therefore, a Step I Habitat Assessment was conducted on June 24, 2024 to determine whether the project site supports suitable BUOW habitat. The assessment was conducted within the project site and a 150-meter (approximately 500-foot) buffer

[3] Historic Aerials. 2024. Aerial Imagery of the Sandalwood Commercial Development Project and Finance Map, 33.996017°, -117.061309°. Aerial Imagery from 1938. Available at: https://www.historicaerials.com/viewer. Accessed August 21, 2024.

zone around the periphery of the project site (collectively, the survey area). The survey area was slowly walked and assessed for suitable BUOW habitat, including:

- disturbed low-growing vegetation within grassland and shrublands (less than 30 percent canopy cover);
- gently rolling or level terrain;
- areas with abundant small mammal burrows, especially California ground squirrel burrows (*Otospermophilus beecheyi*);
- fence posts, rocks, or other low perching locations; and
- artificially created structures, such as earthen berms, debris piles, and cement culverts.

Inaccessible areas of the buffer zone were visually assessed using binoculars.

Step II – Locating Burrows and Burrowing Owls

Because suitable habitat was observed during the habitat assessment, Step II surveys were conducted within the survey area. Step II surveys, which consist of a focused burrow survey (Part A) and four focused BUOW surveys (Part B), were conducted to determine whether the survey area supports suitable burrows and/or BUOW. The focused burrow survey was conducted concurrently with the first BUOW survey.

All potential burrows were checked for signs of recent owl occupation. Signs of occupation include:

- pellets/casting (regurgitated fur, bones, and/or insect parts);
- white wash (excrement); and/or
- feathers.

Since suitable burrows were observed within the survey area, three additional BUOW surveys were conducted. The biologist walked transects spaced no greater than 30 meters apart (approximately 100 feet) to allow for 100 percent visual coverage of all suitable habitat within the survey area. The biologist walked slowly and methodically, closely checking suitable habitat within the survey area for suitable burrows, BUOW diagnostic sign (e.g., molted feathers, pellets/castings, or whitewash at or near a burrow entrance), and individual BUOW. Inaccessible areas of the survey area were visually assessed using binoculars. All suitable burrows, burrow surrogates, BUOW sign, and/or BUOW observations were recorded using a handheld Global Positioning System unit (Figure 4, *Suitable Burrow and Transect Locations*).

RESULTS

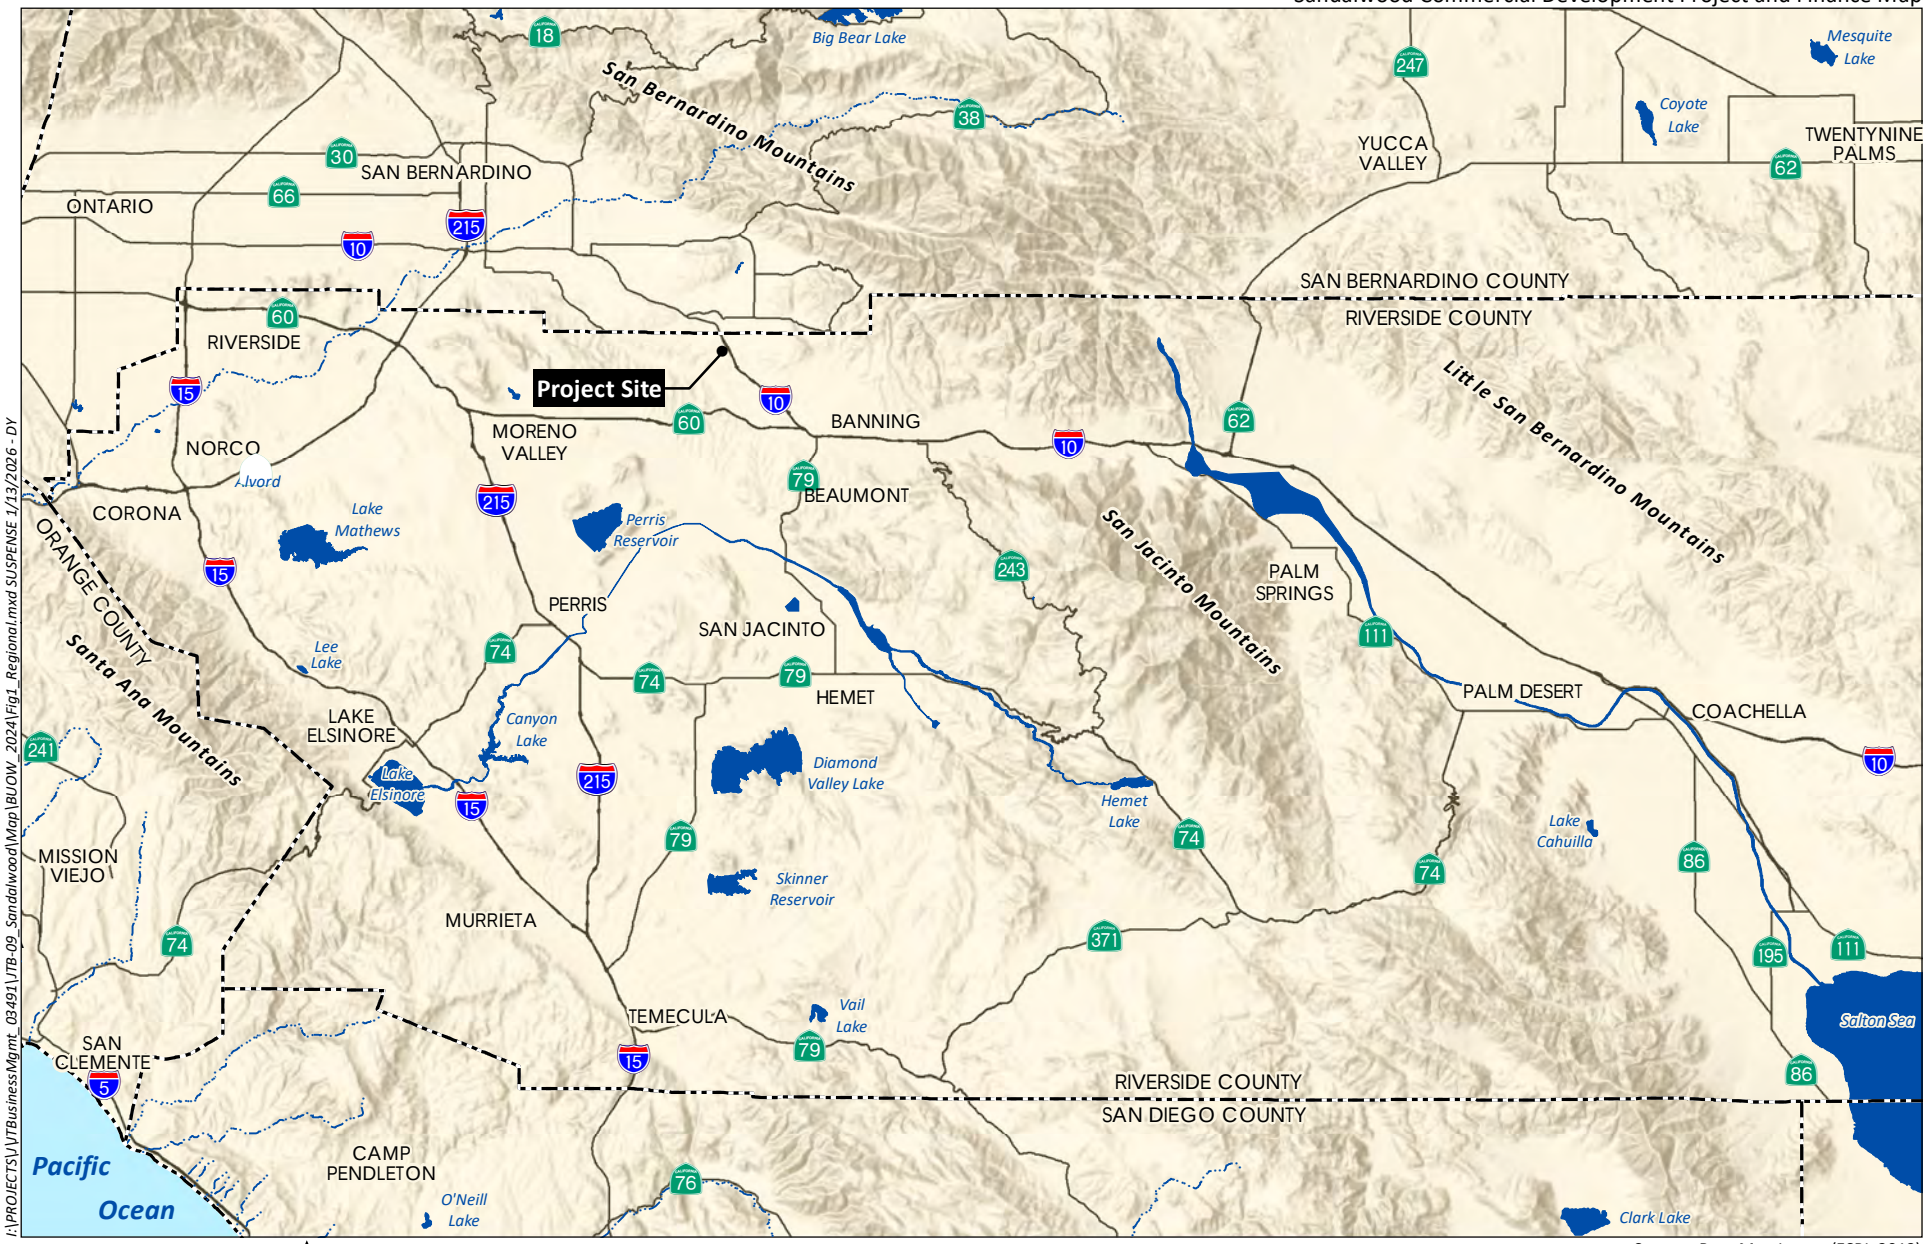
Suitable BUOW habitat was observed within the project site during the habitat assessment, including disturbed habitat and non-native grassland (Attachment A, *Representative Site Photos*). One potential burrow surrogate consisting of a vertical storm drain riser was observed approximately 200 feet

southeast of the 7th Street and Villa Calimesa intersection. An earthen burrowing was observed in the southeastern portion of the project site. No other burrows or burrow surrogates were observed. No BUOW or sign of BUOW occupation were observed during the four focused surveys. Therefore, BUOW does not currently occupy the project site. Observed burrow and burrow surrogate locations and transects walked are shown in Figure 4.

CONCLUSION

No BUOWs were observed or detected within the survey area during the focused surveys. One burrow surrogate and one earthen burrow were observed within the survey area, but no sign of BUOW occupation was observed. A pre-construction survey is required 30 days prior to ground disturbance pursuant to the County's survey protocol.

If you have any questions regarding the information presented in this letter report, please contact us at Nelly.Moreno@helixepi.com or CacheT@helixepi.com, or Lauren Singleton at LaurenS@helixepi.com.



Sincerely,

Nelly Moreno

October 10, 2024 03491.00009.001

Mr. Jack Kofdarali
Sandalwood Travel Center, LP
P.O. Box 1958
Corona, CA 92878

Subject: **2024 Crotch's Bumble Bee (*Bombus crotchii*) Habitat Assessment and Survey Report for Sandalwood Commercial Development Project and Finance Map**

Dear Mr. Kofdarali:

This letter presents the results of a habitat assessment for the California Endangered Species Act (CESA) candidate species Crotch's bumble bee (*Bombus crotchii*; CBB) conducted by HELIX Environmental Planning, Inc. (HELIX) for the Sandalwood Commercial Development Project and Finance Map (project). This report describes the methods used to perform the survey and the results.

PROJECT SITE LOCATION

The 11.2-acre project site assessed for the project is generally located west of Interstate 10 (I-10) and north of Sandalwood Drive in the City of Calimesa, Riverside County, California (Figure 1, *Regional Location*). The project site is within Section 14 of Township 2 South, Range 2 West on the U.S. Geological Survey (USGS) 7.5-minute *El Casco* quadrangle (Figure 2, *USGS Topography*). The project site is bordered by 7th Street to the west and I-10 to the east (Figure 3, *Aerial Photograph*). It is located approximately 400 feet north of the intersection of 7th Street and Sandalwood Drive.

METHODS

HELIX consulted the California Department of Fish and Wildlife's (CDFW) California Natural Diversity Database (CNDDB), Bumble Bee Watch, and iNaturalist to determine the nearest CBB occurrence(s). HELIX biologist Cache Tucker conducted the habitat assessment on June 13, 2024. In accordance with the CDFW's Survey Considerations for CESA Candidate Bumble Bee Species, the biologist mapped habitat alliances within the project site.[1] The habitat alliances were classified following the Manual of

[1] California Department of Fish and Wildlife. 2023. Survey Considerations for CESA Candidate Bumble Bee Species. June 6. Available at: https://nrm.dfg.ca.gov/FileHandler.ashx?DocumentID=213150&inline. Accessed July 2, 2024.

California Vegetation.[2] The biologist recorded the estimated absolute percent cover for individual species for each habitat alliance. In addition to foraging resources, potential nesting habitat (e.g., small mammal burrows, loose soil, bunch grasses, thatch, brush piles, old bird nests, and dead trees) were noted if observed during the assessment.

LITERATURE REVIEW

No recent (i.e., within the last five years) CBB records were found to occur within or adjacent to the project site during the literature review. The nearest, most recent sighting of CBB recorded in the CNDDB was in 2020, 3.1 miles southwest of the project site in the San Timoteo Badlands.[3] There is a historic record from 1975 that overlaps with the project site in the CNDDB. However, this observation covers a large area and the exact observation location is unknown. The nearest, most recent sighting recorded in the Bumble Bee Watch database was in 2024, approximately 6.8 miles northwest of the project site within the San Timoteo Nature Sanctuary.[4] The nearest, most recent sighting recorded in iNaturalist was in 2020, approximately 1.9 miles southwest of the project site within the Cienega Canyon Preserve.[5]

RESULTS

The project site has been used for agriculture since at least 1938[6] and was graded in 2009 for the purpose of implementing a drainage improvement project to support potential future development of the site. The project site is dominated by wild oats and annual brome grasslands, which appear to be maintained on a regular basis (Figure 4; *Vegetation and Land Cover*; Table 1, *Species Composition by Mapped Alliance*). Other alliances included pepper tree grove, developed, and disturbed. The plant species diversity on the project site is limited and consists mostly of non-native annual species as a result of grading, regular discing, and surrounding development (Attachment A, *Plant Species Observed*). Limited potential nesting habitat was observed within the project site, including one ground squirrel (*Otospermophilus beecheyi*) burrow and a small area of loose soil. Representative site photographs are included as Attachment B, *Representative Site Photos*.

Bare Ground		100	-

[1] Additional species observed at less than two percent cover are not included in table. Species previously documented on the project site but not observed during the assessment are also not included in table.
[2] CDFW CA Code.
* Nectar species commonly used by CBB (genera *Acmispon, Antirrhinum, Asclepias, Cirsium, Clarkia, Cordylanthus, Dendromecon, Ehrendorferia, Eriogonum, Eschscholzia, Euthamia, Hypericum, Keckiella, Lantana, Lupinus, Monardella, Phacelia, Salvia, Trichostema,* and *Vicia*).

Many of the species noted in Table 1 were either dead or in seed during the habitat assessment, with the exception of short-pod mustard (*Hirschfeldia incana*), wild lettuce (*Lactuca serriola*), field bindweed (*Convolvulus arvensis*), and doveweed (*Croton setiger*). Nectar species commonly used by CBB (e.g., genera *Acmispon, Antirrhinum, Asclepias, Cirsium, Clarkia, Cordylanthus, Dendromecon, Ehrendorferia, Eriogonum, Eschscholzia, Euthamia, Hypericum, Keckiella, Lantana, Lupinus, Monardella, Phacelia, Salvia, Trichostema,* and/or *Vicia*) were not noted within the project site.

The project site is surrounded by commercial, industrial, and residential development to the north, south, and east and undeveloped land to west, and I-10 is directly adjacent to the eastern boundary. Based on a review of aerial photographs and site observations, the undeveloped land directly west of the project site and south of Sandalwood Drive support potential suitable habitat for CBB.[7]

Bumble bees have an annual life cycle. Queens establish nests in the spring and produce female workers, males, and female gynes (i.e., new queens) through summer. The queen, female workers, and males die in the fall. Gynes hibernate through winter and reemerge the following spring to establish new

[7] Google Earth. 2024. Aerial Imagery of the Sandalwood Commercial Development Project and Finance Map, 33.996017°, -117.061309°. Aerial Imagery from May 2023. Available from: http://www.google.com/earth/index.html. Accessed July 2, 2024.

colonies.[8] Colonies require a persistent nectar source through summer to survive. Without a succession of flowers available from spring through summer, a colony will starve and fail to reproduce new gynes.[9] Many of the species noted on the project site were either dead or in seed. Nectar species commonly used by CBB were not noted on the project site. The surrounding areas to the west and south include potential suitable habitat for CBB. However, based on the limited quantity and diversity of nectar resources on the project site, lack of commonly used nectaring species, and limited potential nesting habitat (i.e., one earthen burrow and a small area of loose soil), the project site does not support sufficient resources to sustain a colony.

CONCLUSION

Based on the limited quantity and diversity of nectar resources on the project site, a lack of known occurrences within adjacent areas, and limited potential nesting habitat, the project site does not contain habitat suitable to support CBB and focused surveys are not required.

Rare Plant Species Potential to Occur

Species Name[1]	Common Name	Status[2]	Habitat, Ecology, and Life History	Potential to Occur[3]
Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) Narrow Endemic Plant Species Survey Area (NEPSSA) Eight				
Allium marvinii	Yucaipa onion	CRPR 1B.2 MSHCP Covered Species (b)	Perennial herb. Occurs in openings on clay soils and chaparral. Elevation range 760-1065 meter (m). Flowering period Mar-Apr.	**None.** The project site does not support clay soils and is outside of this species' elevation range.
Dudleya multicaulis[4]	many-stemmed dudleya	CRPR 1B.2 MSHCP Covered Species (b)	Perennial herb. Occurs in heavy soils (often clay) and sandstone outcrops. Often associated with dry, stony places within coastal sage scrub, valley grasslands, and coastal plains. Elevation range 15-790 m. Flowering period May-Jun.	**None.** The project site does not support heavy clay soils, mapped clay soils, or sandstone outcrops.
Other Rare Plant Species				
Aphyllon epigalium ssp. *Notocalifornicum*	Southern California galium broomrape	CRPR 1B.3	Annual/perennial herb (parasitic). Occurs in riparian forest, cismontane woodland, and lower montane coniferous forest. Associated host is *Galium andrewsii* and possibly other perennial *Galium* spp. Elevation range 1,200-1,535 m. Flowering period Jun-Jul.	**None.** The project site does not support riparian forest, cismontane woodland, or lower montane coniferous forest. The project site is outside of this species' geographic and elevation range.
Astragalus pachypus var. *jaegeri*	Jaeger's bush milkvetch	CRPR 1B.1 MSHCP Covered Species	Shrub. Occurs in rocky areas or sandy soils within grassland, oak woodland, chaparral, and coastal scrub. Elevation range 450-1200 m. Flowering period Dec-Jun.	**None.** The project site does not support rocky or sandy areas within grassland, oak woodland, chaparral, and coastal scrub.
Atriplex coronata var. *notatior*	San Jacinto Valley crownscale	FE CRPR 1B.1 MSHCP Covered Species (d)	Annual herb. Restricted to highly alkaline and silty-clay soils, which are found in certain alkali sink scrub, alkali playa, vernal pool, and annual alkali grassland habitats. Elevation range 139-500 m. Flowering period Apr-Aug.	**None.** The project site does not support alkaline soils and is outside of this species' elevation range.

Species Name[1]	Common Name	Status[2]	Habitat, Ecology, and Life History	Potential to Occur[3]
Atriplex serenana var. *davidsonii*	Davidson's saltscale	CRPR 1B.2 MSHCP Covered Species (d)	Annual herb. This species is historically associated with the isolated alkaline flats of southern California valley areas that have primarily been drained and converted to residential housing or agriculture. Elevation range 10-200 m. Flowering period Apr-Oct.	**None.** The project site does not support alkaline flats, and is outside of this species' elevation range.
Centromadia pungens ssp. *laevis*	smooth tarplant	CRPR 1B.1 MSHCP Covered Species (d)	Annual herb. Occurs within alkali scrub, alkali playas, riparian woodland, watercourses, and grasslands near alkaline locales. Elevation range 0-640 m. Flowering period Apr-Sep.	**None.** The project site does not support alkaline habitats and is outside of this species' elevation range.
Chorizanthe parryi var. *parryi*	Parry's spineflower	CRPR 1B.1 MSHCP Covered Species (e)	Annual herb. Occurs in sandy soil on flats and foothills in mixed grassland, coastal sage scrub, and chaparral communities. Elevation range 275-1,220 m. Flowering period May-Jun.	**None.** The project site does not support coastal sage scrub or chaparral habitats. There is only a small, isolated area of non-native grassland in the western portion of the project site. This species is not expected to occur in this area.
Chorizanthe xanti var. leucotheca	white-bracted spineflower	CRPR 1B.2	Annual herb. Found in Mojavean desert scrub, pinyon and juniper woodland, and coastal scrub (alluvial fans). Elevation range 30-1,200 m. Flowering period Apr-Jun.	**None.** The project site does not support Mojavean desert scrub, pinyon or juniper woodland, or coastal scrub habitats.
Dodecahema leptoceras	slender-horned spineflower	FE/SE CRPR 1B.1 MSHCP Covered Species (b)	Annual herb. Occurs in sandy or gravelly places within chaparral, cismontane woodland, and coastal scrub associated with alluvial fans. Elevation range 200-760 m. Flowering period May-Jun.	**None.** The project site does not support chaparral, cismontane woodland, or coastal scrub habitats.

Species Name[1]	Common Name	Status[2]	Habitat, Ecology, and Life History	Potential to Occur[3]
Eriastrum densifolium ssp. *sanctorum*	Santa Ana River woollystar	FE/SE CRPR 1B.1	Perennial herb. Occurs on sandy soils within river floodplains or terraced fluvial deposits. Elevation range 91-610 m. Flowering period May-Sep.	**None.** The project site is located outside of this species' geographic range and is outside of this species' elevation range. The project site does not support river floodplains or terraces.
Hordeum intercedens	vernal barley	CRPR 3.2 MSHCP Covered Species	Annual grass. Saline flats and depressions in grasslands or in vernal pool basins. Elevation range 5-1,000 m. Flowering period Mar-Jun.	**None**. The project site does not support saline flats, depressional areas, or vernal pool basins.
Imperata brevifolia	California satintail	CRPR 2B.1	Annual herb. Coastal scrub, chaparral, riparian scrub, Mojavean desert scrub, meadows and seeps (alkali), and riparian scrub. Elevation range 0-1,215 m. Flowering period Sep-May.	**None.** The project site does not support coastal scrub, chaparral, riparian scrub, Mojavean desert scrub, meadows or seeps (alkali), or riparian scrub.
Lasthenia glabrata ssp. *coulteri*	Coulter's goldfields	CRPR 1B.1 MSHCP Covered Species (d)	Annual herb. Occurs in coastal salt marsh, upper end of tidal inundation areas, and vernal pools. Elevation range 1-1,220 m. Flowering period Apr-May.	**None.** The project site does not support coastal habitat or vernal pools.
Monardella macrantha ssp. *hallii*	Hall's monardella	CRPR 1B.3	Perennial herb. Occurs on dry slopes and ridges in openings within woodland, chaparral, lower montane coniferous forest and valley and foothill grassland. Elevation range 730-2,195 m. Flowering period May-Aug.	**None.** The project site does not support woodland, chaparral, or lower montane coniferous forest. There is only a small, isolated area of non-native grassland in the western portion of the project site. This species is not expected to occur in this area.

Species Name[1]	Common Name	Status[2]	Habitat, Ecology, and Life History	Potential to Occur[3]
Nama stenocarpa	mud nama	CRPR 2B.2 MSHCP Covered Species (d)	Annual or perennial herb. Occurs in marshes and swamps and along lake margins and riverbanks. Elevation range 5-500 m. Flowering period Mar-Oct.	**None.** The project site does not support vernal pools or alkaline marshes, and is outside of this species' elevation range.
Sidalcea hickmanii ssp. *parishii*	Parish's checkerbloom	CRPR 1B.2	Perennial herb. Occurs in chaparral, cismontane woodland, lower montane coniferous forest. Disturbed burned or cleared areas on dry, rocky slopes, in fuel breaks and fire roads along the mountain summits. Elevation range 1,000-2,499 m. Flowering period Jun-Aug.	**None.** The project site does not support chaparral, cismontane woodland, or lower montane coniferous forest habitats, and is outside of this species' elevation range.
Sidalcea neomexicana	salt spring checkerbloom	CRPR 2B.2	Perennial herb. Occurs within alkaline, mesic soils within springs and marshes. Elevation range 15-1,530 m. Flowering period Apr-Jun.	**None.** The project site does not support alkaline springs or marshes.
Streptanthus campestris	southern jewelflower	CRPR 1B.3	Perennial herb. Chaparral, lower montane coniferous forest, pinyon and juniper woodland. Elevation range 900-2,300 m. Flowering period May-Jun.	**None.** The project site does not support chaparral, lower montane coniferous forest, or pinyon or juniper woodland habitats, and is outside of this species' elevation range.
Symphyotrichum defoliatum	San Bernardino aster	CRPR 1B.2	Perennial herb. Occurs in vernally mesic soils within cismontane woodland, coastal scrub, lower montane coniferous forest, meadows and seeps, marshes and swamps, grasslands, streams, springs, and disturbed ditches. Elevation range 2-2,040 m. Flowering period Jul-Nov.	**None.** The project site does not support vernally mesic soils.

Species Name[1]	Common Name	Status[2]	Habitat, Ecology, and Life History	Potential to Occur[3]
Trichocoronis wrightii var. *wrightii*	Wright's trichocoronis	CRPR 2B.1	Annual herb. Occurs in moist alkaline soils within mud flats of vernal pools/lakes and drying river beds. Elevation range 5-435 m. Flowering period May-Sep.	**None.** The project site does not support alkaline mud flats or dry river beds, and is outside of this species' elevation range.

Source: HELIX (2025)

[1] Sensitive species reported within the *El Casco* and *Yucaipa* quadrangles based on a database search conducted through the CNDDB and CNPS.

[2] Listing is as follows: F = Federal; S = State of California; E = Endangered; T = Threatened.
CRPR = California Rare Plant Rank: 1A – presumed extinct; 1B – rare, threatened, or endangered in California and elsewhere; 2A – rare, threatened, or endangered in California and elsewhere; 2B – rare, threatened, or endangered in California but more common elsewhere. Extension codes: .1 – seriously endangered; .2 – moderately endangered; .3 – not very endangered. MSHCP Conditionally Covered Species (a) through (f): (a) surveys may be required for species as part of wetland mapping (MSHCP Section 6.1.2); (b) surveys may be required for species within Narrow Endemic Plant Species Survey Area (MSHCP Section 6.1.3); (c) surveys may be required for species within locations shown on survey maps (MSHCP Section 6.3.2); (d) surveys may be required for species within Criteria Area Species Survey Area (MSHCP Section 6.3.2); (e) covered species will be considered to be covered species adequately conserved when conservation requirements identified in species-specific conservation objectives have been met (MSHCP Table 9-3); and (f) covered species will be conserved covered species adequately conserved when a Memorandum of Understanding is executed with the Forest Service that addresses management for these species on Forest Service Land (MSHCP Table 9-3).

[3] Potential to Occur is assessed as follows: **None**: Habitat suitable for species survival does not occur on the project site, the project site is not within geographic range of the species, and/or the project site is not within the elevation range of the species; **Low**: Suitable habitat is present on the project site but of low quality and/or small extent. The species has not been recorded recently on or near the project site. Although the species was not observed during surveys for the current project, the species cannot be excluded with certainty; **Moderate**: Suitable habitat is present on the project site and the species was recorded recently near the project site; however, the habitat is of moderate quality and/or small extent. Although the species was not observed during surveys for the current project, the species cannot be excluded with certainty; **High**: Suitable habitat of sufficient extent is present on the project site and the species has been recorded recently on or near the project site, but was not observed during surveys for the current project. However, focused/protocol surveys are not required or have not been completed; Presumed **Present**: The species was observed during focused surveys for the current project and is assumed to occupy the project site; **Presumed Absent**: Suitable habitat is present on the project site but focused surveys for the species were negative.

[4] This species was not reported within the *El Casco* or *Yucaipa* quadrangles, but was included in this table since this species is a target species for the Narrow Endemic Plant Species Survey Area the project site is located within.

Appendix H

Sensitive Animal Species Potential to Occur

Species Name	Common Name	Status[2]	Habitat, Ecology, and Life History	Potential to Occur[3]
Invertebrates				
Bombus crotchii	Crotch's bumble bee	SCE	Coastal California east to the Sierra-Cascade crest and south into Mexico and is associated with grassland and scrub habitats near the coast. Species' food genera include *Antirrhinum* spp., *Clarkia* spp., *Dendromecon* spp., *Eriogonum* spp., *Eschscholzia* spp., *Lupinus* spp., *Medicago* spp., *Phacelia* spp., and *Salvia* spp. Nests are underground and commonly consist of abandoned rodent nests.	**None.** Based on the limited quantity and diversity of nectar resources on the project site, a lack of known occurrences within adjacent areas, and limited potential nesting habitat, the project site does not contain suitable habitat. See Appendix E for detailed habitat assessment report.
Fish				
Oncorhynchus mykiss irideus	steelhead - southern California Distinct Population Segment (DPS)	FE	Typically migrate up freshwater streams from saltwater or brackish water to spawn. Southern steelhead have a greater tolerance to warmer water.	**None.** The project site does not support suitable stream habitat.
Rhinichthys gabrielino	Santa Ana speckled dace	SSC	Occurs in perennial streams located in the headwaters of Santa Ana and San Gabriel rivers. Prefers summer water temperatures between 17 and 20 degrees Celsius within shallow reaches with riffles.	**None.** The project site does not support suitable stream habitat.
Amphibians				
Rana muscosa	southern mountain yellow-legged frog	FE/SE MSHCP Covered Species (c)	Occurs in mountain creeks, lakes and lakeshores, streams, and pools, preferring sunny areas. This species rarely strays far from water and can remain underwater for long periods of time. Always encountered within a few feet of water. Tadpoles may require 2 to 4 years to complete their aquatic development.	**None**. The project site does not support suitable aquatic habitat for this species.
Spea hammondii	western spadefoot	FCT/SSC MSHCP Covered Species	Occurs in open coastal sage scrub, chaparral, and grassland, along sandy or gravelly washes, floodplains, alluvial fans, or playas; require temporary pools for breeding and friable soils for burrowing; generally excluded from areas with bullfrogs (*Lithobates catesbeianus*) or crayfish (*Procambarus* spp.).	**None.** The project site does not support washes, floodplains, alluvial fans, or temporary pools.

Species Name	Common Name	Status[2]	Habitat, Ecology, and Life History	Potential to Occur[3]
Reptiles				
Anniella stebbinsi	Southern California legless lizard	SSC	Occurs in moist warm loose soil with plant cover. May be found in coastal sand dunes, chaparral, pine-oak woodlands, desert scrub, sandy washes, and stream terraces with sycamores, cottonwoods, or oaks.	**None.** The project site does not support habitat with moist soil and plant cover for burrowing.
Arizona elegans occidentalis	California glossy snake	SSC	Most common in desert habitats, but also occurs in chaparral, sagebrush, valley-foothill hardwood, pine-juniper, and annual grassland. Associated with sandy open areas with sparse shrub cover but can also occur in rocky habitats.	**None.** The project site does not support desert habitat, chaparral, sagebrush, forest, or rocky habitats. Although there is some non-native grassland mapped along the western project site boundary, this species is not expected to occur here since the habitat is small and isolated from other potentially suitable habitat and is located directly adjacent to I-10.
Aspidoscelis tigris stejnegeri	coastal whiptail	SSC MSHCP Covered Species	Open coastal sage scrub, chaparral, and woodlands. Frequently found along the edges of dirt roads traversing its habitats. Important habitat components include open, sunny areas, shrub cover with accumulated leaf litter, and an abundance of insects, spiders, or scorpions.	**None.** The project site does not support open coastal sage scrub, chaparral, or woodlands.
Phrynosoma blainvillii	coast horned lizard	SSC MSHCP Covered Species	Coastal sage scrub and open areas in chaparral, oak woodlands, and coniferous forests with sufficient basking sites, adequate scrub cover, and areas of loose soil; require native ants, especially harvester ants (*Pogonomyrmex* spp.), and are generally excluded from areas invaded by Argentine ants (*Linepithema humile*).	**None.** The project site does not support coastal sage scrub, chaparral, oak woodlands, or coniferous forest habitats.
Salvadora hexalepis virgultea	coast patch-nosed snake	SSC	Primarily found in chaparral but also inhabits coastal sage scrub and areas of grassland mixed with scrub. Uses small mammal burrows for refuge and overwintering.	**None.** The project site does not support coastal sage scrub or grassland mixed with shrubs.

Species Name	Common Name	Status[2]	Habitat, Ecology, and Life History	Potential to Occur[3]
Thamnophis hammondii	two-striped gartersnake	SSC	Occurs along perennial and intermittent streams bordered by dense riparian vegetation. Occasionally occurs in artificially created aquatic habitats, such as constructed lakes or stock ponds.	**None.** The project site does not support perennial or intermittent streams.
Birds				
Agelaius tricolor	tricolored blackbird	ST MSHCP Covered Species	Breeds in dense stands of cattails (*Typha* sp.) or bulrushes (*Schoenoplectus* sp./*Scirpus* sp.) located within large freshwater marshes. Forages in adjacent open habitats, such as agricultural fields, pastures, or grasslands.	**None.** The project site does not support freshwater marsh for breeding or agricultural for foraging.
Aquila chrysaetos	golden eagle	SFP MSHCP Covered Species	Typical foraging habitat includes grassy and open, shrubby habitats. Generally, nests on remote cliffs; requires areas of solitude at a distance from human habitation.	**None.** The project site does not support suitable nesting or foraging habitat.
Athene cunicularia	burrowing owl	SCT MSHCP Covered Species (c)	Typical habitat is grasslands, open scrublands, agricultural fields, and other areas where there are ground squirrel burrows or other areas in which to burrow.	**Absent.** The project site supports suitable habitat and two burrows/burrow surrogates. Focused surveys were conducted during the 2024 breeding season, which were negative. See Appendix D for detailed habitat assessment report.
Buteo swainsoni	Swainson's hawk	ST MSHCP Covered Species	Breeds in open grassland with scattered trees or groves within agricultural/ranch lands. Forages for small mammals, reptiles, birds, and insects in adjacent grassland and agricultural fields.	**Low.** This species is not known to nest in southern California with the exception of populations in the Antelope Valley and Mojave Desert. Undeveloped land on the project site could provide low quality foraging habitat, although no mammal burrows were observed on the project site. This species was recorded in eBird in 2017, approximately 2.7 miles to the northeast of the project site.

Species Name	Common Name	Status[2]	Habitat, Ecology, and Life History	Potential to Occur[3]
Elanus leucurus	white-tailed kite	SFP MSHCP Covered Species	Nests in trees with dense canopies within open grasslands, woodlands, and marshes. Forages for small mammals within lightly grazed/ungrazed pastures and grasslands.	**Low.** The project site supports a few Peruvian pepper trees (*Schinus molle*) that could be used for nesting habitat, although this is considered low quality nesting habitat since these trees are directly adjacent to I-10. Undeveloped land on the project site could provide low quality foraging habitat, although no mammal burrows were observed on the project site. This species was recorded in eBird in 2018, approximately 0.4 mile to the southeast of the project site.
Empidonax traillii extimus	southwestern willow flycatcher	FE/SE MSHCP Covered Species (a)	Nests within thickets of willows or other riparian understory usually along streams, ponds, lakes, or canyons. Migrants may be found among other shrubs in wetter areas.	**None.** The project site does not support mature riparian woodlands.
Icteria virens	yellow-breasted chat	SSC MSCHP Covered Species	Summer resident of mature riparian woodlands. Nests are placed in low, dense vegetation, such as willows (*Salix* sp.), blackberry (*Rubus* sp.), and wild grape (*Vitis californica*).	**None.** The project site does not support mature riparian woodlands.
Lanius ludovicianus	loggerhead shrike	SSC MSCHP Covered Species	Nests in dense, often thorny, shrubs or trees. Will nest within brush piles or tumbleweeds when trees or shrubs are not present. Feeds on a wide variety of animals, including arthropods, amphibians, reptiles, small mammals, and small songbirds within open habitats such as grasslands, agricultural fields, pastures, shrublands, and ruderal areas with adequate perching locations.	**Low.** The project site does not support suitable nesting habitat. Undeveloped land on the project site could provide low quality foraging habitat. This species was recorded in eBird in 2015, approximately 2.3 miles to the southwest of the project site.
Setophaga petechia	yellow warbler	SSC MSHCP Covered Species	Breeds in lowland and foothill riparian woodland, dominated by cottonwoods, alders, or willows.	**None.** The project site does not support mature riparian woodlands.

Species Name	Common Name	Status[2]	Habitat, Ecology, and Life History	Potential to Occur[3]
Vireo bellii pusillus	least Bell's vireo	FE/SE MSHCP Covered Species (a)	Inhabits riparian woodland and is most frequent in areas that combine an understory of dense, young willows or mule fat with a canopy of tall willows.	**None.** The project site does not support suitable habitat for this species.
Mammals				
Dipodomys merriami parvus	San Bernardino kangaroo rat	FE/SE MSHCP Covered Species (c)	Generally associated with alluvial fan sage scrub, but also occurs in sage scrub, chaparral, and grassland in proximity to alluvial fan sage scrub habitats.	**None.** The project site and adjacent areas do not support alluvial fan sage scrub habitat.
Dipodomys stephensi	Stephens' kangaroo rat	FE/ST MSHCP Covered Species	Primarily occurs in sparsely vegetated areas within grassland habitats, but also found in open coastal scrub habitat. Feeds on filaree (*Erodium* sp.) and brome (*Bromus* sp.) seeds. Digs burrows in firm soil or uses abandoned pocket gopher burrows.	**None.** The project site supports a small area of non-native grassland along the eastern project boundary. No small mammal burrows were observed on the project site. This species recorded in CNDDB in 1990, approximately 3.3 miles to the southeast of the project site.
Lasiurus xanthinus	western yellow bat	SSC	Roosts in trees and are commonly found in palms and cottonwoods. Typically forages over water and among trees within riparian, desert riparian, desert wash, and palm oasis habitats.	**None**. The project site does not support roosting or foraging habitat.
Leptonycteris yerbabuenae	lesser long-nosed bat	SSC	Caves and mines are used as day roosts. Caves, mines, rock crevices, trees and shrubs, and abandoned buildings are used as night roosts for digesting meals. Nectar, pollen, and fruit-eating bat that primarily feeds on agaves, saguaro, and organ pipe cactus.	**None**. The project site does not support roosting or foraging habitat.
Neotoma lepida intermedia	San Diego desert woodrat	SSC MSHCP Covered Species	Open chaparral, coastal sage scrub, pinyon-juniper, and Joshua tree habitats. This species builds large, stick nests in rock outcrops or around clumps of cactus or yucca.	**None**. The project site does not support coastal sage scrub, pinyon-juniper, or Joshua tree habitats. Cactus and yucca are not present.
Onychomys torridus ramona	southern grasshopper mouse	SSC	Sandy valley floors within desert scrub habitat with low to moderate shrub cover and friable soils, but also found in coastal scrub and chaparral habitats.	**None**. The project site does not support desert scrub, coastal scrub, or chaparral habitats.

Species Name	Common Name	Status[2]	Habitat, Ecology, and Life History	Potential to Occur[3]
Perognathus longimembris brevinasus	Los Angeles pocket mouse	SSC MSHCP Covered Species (c)	Sandy, gravelly, or stony soils within coastal scrub, alluvial sage scrub, and grassland habitats.	**Low.** The project site supports a small area of non-native grassland along the eastern project boundary. No small mammal burrows were observed on the project site. This species was recorded in the CNDDB in 2016, approximately 4.9 miles to the southeast of the project site.

Source: HELIX (2025)

[1] Sensitive species reported within the *El Casco* and *Yucaipa* quadrangles based on a database search conducted through the CNDDB.

[2] Listing is as follows: F = Federal; S = State of California; E = Endangered; T = Threatened; CE = Candidate Endangered; CT = Candidate Threated; FP = Fully Protected; SSC = State Species of Special Concern. MSHCP Conditionally Covered Species (a) through (f): (a) surveys may be required for species as part of wetland mapping (MSHCP Section 6.1.2); (b) surveys may be required for species within Narrow Endemic Plant Species Survey Area (MSHCP Section 6.1.3); (c) surveys may be required for species within locations shown on survey maps (MSHCP Section 6.3.2); (d) surveys may be required for species within Criteria Area Species Survey Area (MSHCP Section 6.3.2); (e) covered species will be considered to be covered species adequately conserved when conservation requirements identified in species-specific conservation objectives have been met (MSHCP Table 9-3); and (f) covered species will be conserved covered species adequately conserved when a Memorandum of Understanding is executed with the Forest Service that addresses management for these species on Forest Service Land (MSHCP Table 9-3).

[3] Potential to Occur is assessed as follows. **None**: Species is so limited to a particular habitat that it cannot disperse across unsuitable habitat (*e.g.* aquatic organisms), and habitat suitable for its survival does not occur on the project site; **Not Expected**: Species moves freely and might disperse through or across the project site, but suitable habitat for residence or breeding does not occur on the project site (includes species recorded during surveys but only as transients); **Low**: Suitable habitat is present on the project site but of low quality and/or small extent. The species has not been recorded recently on or near the project site. Although the species was not observed during surveys for the current project, the species cannot be excluded with certainty; **Moderate**: Suitable habitat is present on the project site and the species was recorded recently near the project site; however, the habitat is of moderate quality and/or small extent. Although the species was not observed during surveys for the current project, the species cannot be excluded with certainty; **High**: Suitable habitat of sufficient extent for residence or breeding is present on the project site and the species has been recorded recently on or near the project site, but was not observed during surveys for the current project. However, focused/protocol surveys are not required or have not been completed; **Presumed Present**: The species was observed during biological surveys for the current project and is assumed to occupy the project site; **Presumed Absent**: Suitable habitat is present on the project site but focused/protocol surveys for the species were negative.

EXECUTIVE SUMMARY

J & T Investments contracted HELIX Environmental Planning, Inc. (HELIX) to provide cultural resources services for the Sandalwood Commercial Development Project (project) in the City of Calimesa, Riverside County, California. The project is a proposed approximately five-acre commercial development project within the southern half of Assessor Parcel Number (APN) 411-210-024. A cultural resources study including a records search, Sacred Lands File search, Native American outreach, a review of historic aerial photographs and maps, and a pedestrian survey was conducted for the project site, the southern half of APN 411-210-024, and the additional five acres north of the proposed development site (study area). This report details the methods and results of the cultural resources study and has been prepared to comply with the California Environmental Quality Act (CEQA).

The records search obtained from the Eastern Information Center (EIC) on March 22, 2021, indicated that six previous cultural resources are located within a half-mile of the study area, one of which resides within the project site. No prehistoric sites were recorded within a half-mile of the project site. One historic resource, site P-33-015300, a series of nine historic-era utility poles, is located within the project site. One historic resource is located outside of the development footprint but within proximity to the project, within the study area. P-33-015299 consisted of two glass bottle fragments, which date from 1880 to 1914, and a scattering of porcelain plate fragments that were too small to be dated. The remaining four resources recorded in the records search radius consist of historic sites associated with rural residences, agricultural, and farming activities located west of Interstate 10 to the north and south of the project.

A pedestrian field survey of the study area was conducted by HELIX and a Native American monitor from the Morongo Band of Mission Indians, Lerae Necochea, on February 16, 2021. One historic isolate (P-33-015299) consisting of a glass bottle and porcelain plate fragments was previously recorded within the five acres located north of the proposed development site. However, the glass bottle and porcelain fragments were not reidentified during the pedestrian survey. The project will not impact P-33-015299 because it is located outside of the development footprint. One additional historic resource, P-33-015300, consisting of nine wooden utility poles, is located within the project site along the east side of Seventh Street. Site P-33-015300 was re-examined by HELIX on December 8, 2021. Of the nine contributing utility poles, only three poles are within the project site and are slated for removal so that the utilities may be moved underground. Of the three poles, only one pole is of historic age. However, the pole is not considered a resource individually. The pole is a contributor to a historic alignment. However, the project will not be altering the alignment. As such, the project will not cause a significant impact under CEQA or an adverse effect under the National Historic Preservation Act (NHPA) to P-33-15300. Furthermore, HELIX submitted an update to the Department of Parks and Recreation (DPR) Primary Record Form to the EIC. No other cultural resources were observed during the pedestrian survey.

The Native American Heritage Commission (NAHC) conducted a Sacred Lands File search on December 22, 2020, and provided a list of Native American contacts who may have knowledge of sacred sites within the area. HELIX sent letters to the contacts listed by the NAHC on February 5, 2021, to scope for additional information regarding tribal resources within the study area. HELIX received three responses from the San Manuel Band of Mission Indians, Agua Caliente Band of Cahuilla Indians, and Fort Yuma Quechan Indian Tribe. However, no additional information regarding tribal or cultural resources within the study area was provided by the tribes.

Based on the results of the current study, no archaeological or historical resources will be affected by the Sandalwood Commercial Development Project. As such, no impacts to cultural resources are anticipated. Due to previous site grading (unrelated to the project), there is a low sensitivity for buried cultural resources. However, the possibility of encountering buried resources within disturbed soil conditions cannot be precluded. As such, this study recommends that the project retain a qualified archaeologist to consult with in the event cultural deposits are encountered during development. No mitigation measures are recommended for the project unless additional resources are identified through tribal consultation. In the event that additional cultural resources or sensitivities are identified through tribal consultation, this study recommends an archaeological and Native American monitoring program be implemented for ground-disturbing activities.

1.0 INTRODUCTION

J & T Investments contracted HELIX Environmental Planning, Inc. (HELIX) to provide cultural resources services for the Sandalwood Commercial Development Project (project) in the City of Calimesa, Riverside County, California. The project intends to develop approximately five acres within the southern half of Assessor Parcel Number (APN) 411-210-024 for commercial development (project site). A cultural resources study including a records search, Sacred Lands File search, Native American outreach, a review of historic aerial photographs and maps, and a pedestrian survey was conducted for the project site and the adjacent five acres located north of the project site (study area). This report details the methods and results of the cultural resources study and has been prepared to comply with the California Environmental Quality Act (CEQA).

1.1 PROJECT LOCATION

The project is located in the City of Calimesa (City) in northern Riverside County (Figure 1, *Regional Location*). The project is located west of Interstate (I-) 10, within Section 14 of Township 2 South, Range 2 West, on the U.S. Geological Survey (USGS) 7.5' El Casco quadrangle (Figure 2, *USGS Topography*). The project intends to develop the southern half of APN 411-210-024 (project site), which is bordered by Seventh Street to the west and I-10 to the east (Figure 3, *Aerial Photograph*). The project site is situated between Villa Calimesa Lane to the north and Sandalwood Drive to the south. Although development is only proposed in the southern half of the parcel, this analysis refers to the entire parcel (APN 411-210-024) as the "study area" (Figure 4, *Proposed Project*).

1.2 PROJECT DESCRIPTION

The project proposes to develop a fueling station with a 3,849 square-foot Convenient Store, a 2,000 square-foot Quick Service Restaurant, a four-pump vehicle canopy, a 10-pump semi-truck canopy, a CAT scale, and underground storage tanks, with associated parking and landscaping within the southern half of APN 411-210-024 (Figure 4). As the existing site is gently sloped with a ditch along the northern boundary and bisecting the northeast portion of the site, the project anticipates that cuts and fills during earthwork will be moderate to provide a level building pad and positive site drainage.

1.3 REGULATORY FRAMEWORK

Cultural resources are defined as buildings, sites, structures, or objects, each of which may have historical, architectural, archaeological, cultural, and/or scientific importance. Significant resources are those resources that have been found eligible to the California Register of Historical Resources (CRHR) or National Register of Historic Places (NRHP), as applicable.

1.3.1 National Historic Preservation Act

Federal regulations that would be applicable to the project (e.g., permitting) consist of the National Historic Preservation Act (NHPA) and its implementing regulations (16 United States Code 470 et seq., 36 Code of Federal Regulations [CFR] Part 800). Section 106 of the NHPA requires Federal agencies to take into account the effects of their undertakings on "historic properties", that is, properties (either historic or archaeological) that are eligible for the NRHP. To be eligible for the NRHP, a historic property must be significant at the local, state, or national level under one or more of the following four criteria:

A. associated with events that have made a significant contribution to the broad patterns of our history;

B. associated with the lives of persons significant in our past;

C. embodies the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; and/or

D. has yielded, or may be likely to yield, information important in prehistory or history.

1.3.2 California Environmental Quality Act (CEQA)

The CEQA, Public Resources Code (PRC) 21084.1, and California Code of Regulations (CCR) Title 14 Section 15064.5, address determining the significance of impacts to archaeological and historic resources and discuss significant cultural resources as "historical resources," which are defined as:

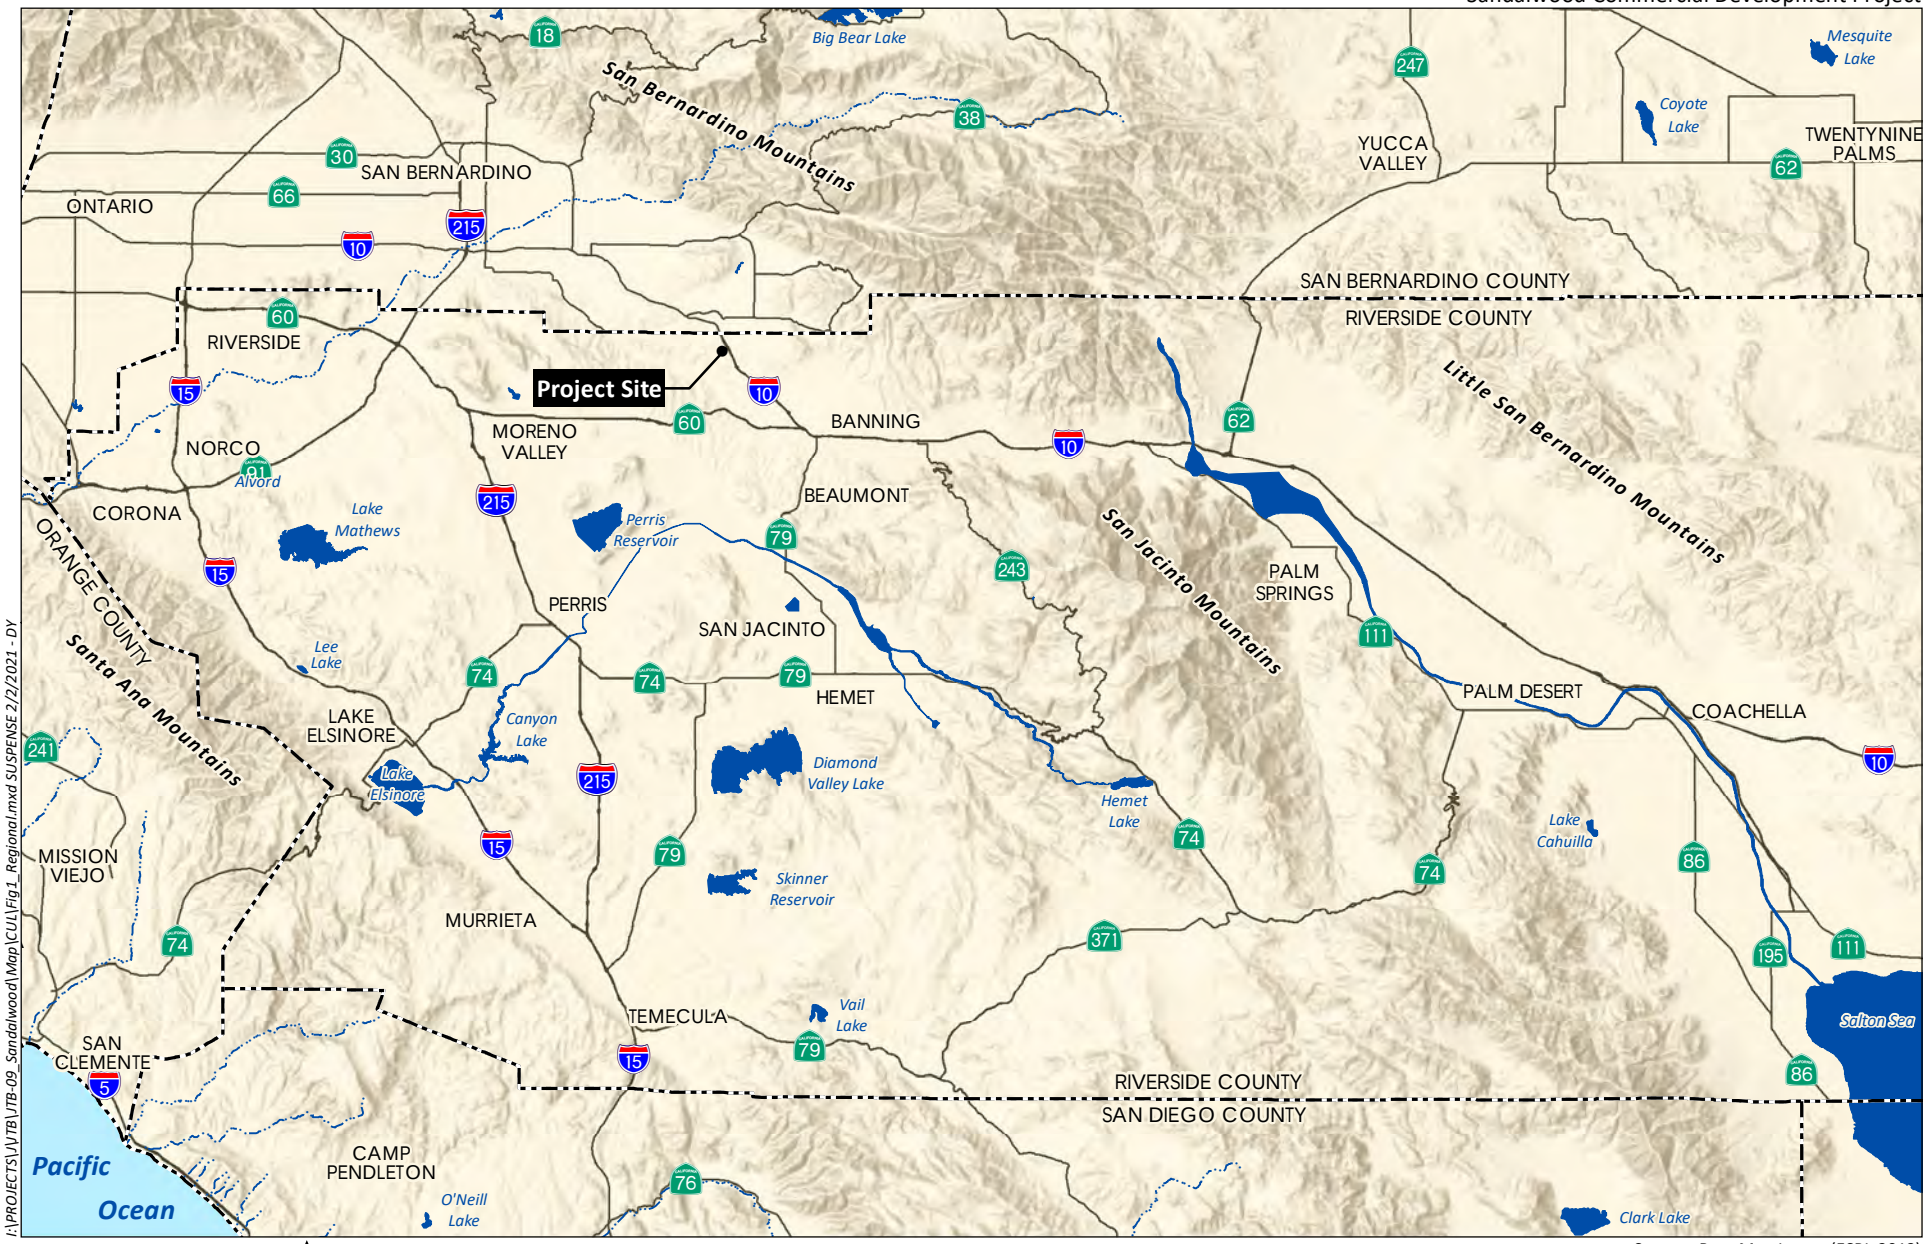
- resource(s) listed or determined eligible by the State Historical Resources Commission for listing in the CRHR (14 CCR Section 15064.5[a][1])

- resource(s) either listed in the NRHP or in a "local register of historical resources" or identified as significant in a historical resource survey meeting the requirements of Section 5024.1(g) of the PRC, unless "the preponderance of evidence demonstrates that it is not historically or culturally significant" (14 CCR Section 15064.5[a][2])

- resources determined by the Lead Agency to meet the criteria for listing on the CRHR (14 CCR Section 15064.5[a][3])

For listing in the CRHR, a historical resource must be significant at the local, state, or national level under one or more of the following four criteria:

1. It is associated with events that have made a significant contribution to the broad patterns of local or regional history, or the cultural heritage of California or the United States;



2. It is associated with the lives of persons important to local, California, or national history;

3. It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of a master or possesses high artistic values;

4. It has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California, or the nation.

Under 14 CCR Section 15064.5(a)(4), a resource may also be considered a "historical resource" for the purposes of CEQA at the discretion of the lead agency.

Significant resources must retain enough of their historic character or appearance to be recognizable as historical resources and to convey the reasons for their significance. Resource integrity, which is the authenticity of a historical resource's physical identity evidenced by the survival of characteristics that existed during the resource's period of significance, is evaluated with regard to the retention of location,

design, setting, materials, workmanship, feeling, and association. In an archaeological deposit, integrity is assessed with reference to the preservation of material constituents and their culturally and historically meaningful spatial relationships. A resource must also be judged with reference to the particular CRHR/NRHP criteria under which it is proposed for eligibility.

Under Section 106 of the NHPA, actions that alter any of the characteristics that qualify a property for eligibility for listing in the NRHP "in a manner that would diminish the integrity of the property's location, design, setting, materials, workmanship, feeling, or association" (36 CFR 800.5[a]) constitute an adverse effect to the historic property.

1.3.3 Calimesa

The City of Calimesa General Plan (2014) contains the following policies that are relevant to cultural resources. Policies designated as (MM) were specifically designed to provide mitigation for project-related impacts identified through the CEQA review process.

POLICY RM-16 Identify, protect, and preserve the historical and cultural resources of the city. (MM)

> ACTION ITEM RM-16.1: Increase public awareness of Calimesa's cultural heritage and resources through the development of education programs. (MM)
>
> ACTION ITEM RM-16.2: Require the preservation of identified cultural resources to the extent possible, through dedication, removal, transfer, reuse, or other means. (MM)
>
> ACTION ITEM RM-16.3: Review all proposed development for the possibility of cultural/archaeological/paleontological sensitivity. When existing information indicates that a site proposed for development may contain paleontological resources, a report stating the extent and potential significance of the resources that may exist within the proposed development shall be prepared and include mitigation measures as appropriate. (MM)
>
> ACTION ITEM RM-16.4: The City will work with the Native American community and others to adopt an appropriate process and procedure for the monitoring of excavation in cultural and paleontological sensitive areas and adopt a process for ensuring the appropriate curation of any cultural or paleontological resources discovered. (MM)

POLICY RM-17: Seek to protect significant historical sites or structures by offering programs and/or incentives to preserve, restore, or reuse the structures while maintaining their historical significance and integrity. (MM)

> ACTION ITEM RM-17.1: Identify opportunities for adaptive reuse of historic sites and buildings. (MM)

1.3.4 Native American Heritage Values

California State Assembly Bill (AB) 52 revised PRC Section 21074 to include Tribal Cultural Resources (TCRs) as an area of CEQA environmental impact analysis. As a general concept, a TCR is similar to the federally defined termed Traditional Cultural Properties (TCP); however, it incorporates consideration of local and state significance and required mitigation under CEQA. According to Patricia L. Parker and Thomas King (1998), "Traditional" in this context refers to those beliefs, customs, and practices of a

living community of people that have been passed down through the generations, usually orally or through practice. The traditional cultural significance of a historic property, then, is derived from the role the property plays in a community's historically rooted beliefs, customs, and practices.

Per PRC Section 21080.3, a CEQA lead agency must consult with any California Native American tribe that requests consultation and that is traditionally and culturally affiliated with the geographic area of a proposed project to identify resources of cultural or spiritual value to the tribe, even if such resources are already eligible as historical resources as a result of cultural resources studies. A TCR may be considered significant if it is (i) included in a local or state register of historical resources; (ii) determined by the lead agency to be significant pursuant to criteria set forth in PRC Section 5024.1; (iii) a geographically defined cultural landscape that meets one or more of these criteria; (iv) a historical resource described in PRC Section 21084.1 or a unique archaeological resource described in PRC Section 21083.2; or (v) a non-unique archaeological resource if it conforms with the above criteria.

1.4 PROJECT PERSONNEL

Stacie Wilson, M.S., RPA, served as principal investigator of this technical report. Ms. Wilson meets the qualifications of the Secretary of Interior's Standards and Guidelines for archaeology. Mary Robbins-Wade, M.A, RPA, provided overall project management support and senior technical review. Kassie Sugimoto, M.A., James Turner, M.A., RPA, and Theodore Cooley, M.A. RPA, served as the authors of this report. Julie Roy, B.A., directed the field survey and served as a report contributor. Kent Smolik, Allana O'Connor, Kassie Sugimoto, and Ricky Vallejos (HELIX), and Lerae Necochea (Native American monitor) from the Morongo Band of Mission Indians participated in the pedestrian survey. Resumes for key project personnel are presented in Appendix A.

2.0 PROJECT SETTING

2.1 NATURAL SETTING

The Project area is located in the Peninsular Ranges geomorphic province in the San Gorgonio Pass area between the San Jacinto Mountains to the southeast and the San Bernardino Mountains to the northwest, along the northeastern edge of the San Bernardino Valley (Hall 2007). The Project is situated at the crest and boundary of two watersheds, the upper reaches of San Timoteo Creek, a tributary in the Santa Ana River watershed the west, and the San Gorgonio River that empties into the Salton Basin in the Colorado Desert to the southeast. The project area is located along the north side of an unnamed drainage that is a tributary of San Timoteo Creek. Geologically, the project area and vicinity are underlain, principally, by middle Pleistocene, old axial channel sedimentary deposits consisting of gray, unconsolidated to indurated gravel, sand, and silt (Morton 2004:9). In areas immediately adjacent to the west, are sedimentary deposits referred to as the upper member of the "San Timoteo beds of Frick (1921)", consisting of Pliocene and Pleistocene, nonmarine, sometimes fossiliferous, gray, coarse-grained, moderately indurated, interbedded sandstone, and conglomerate that erodes to form sharp-ridged badlands topography (Morton 2004: 12). To the north and east are fine- to coarse-grained, Mesozoic age mylonitic and cataclastic granitic rocks, including cataclastic granodiorite, tonalite, and quartz diorite (Morton 2004:33). Two soil series are represented in the project area: the Ramona very fine sandy loam, 0 to 8 percent slopes, present in approximately 55 percent of the project area; and the San Timoteo loam, 25 to 50 percent slopes in the remainder (Web Soil Survey USDA 2021).

While little native vegetation is present in the project location today, the vegetation in the prehistoric era likely consisted of a mixture of chamise chaparral and coastal sage scrub vegetation, within and on the surrounding hills and ravines, with riparian and/or oak woodland plants along portions of the adjacent unnamed drainage, and nearby Yucaipa Creek and San Timoteo Creek. The chaparral community contains, principally, chamise (*Adenostoma fasiculatum*), along with hoaryleaf ceanothus (*Ceanothus crassifolius*), laurel sumac (*Malosma laurina*), black sage *(Salvia mellifera*), and Cleveland sage (S*. clevelandii)* (Head 1972). This community, along with the coastal sage scrub community, with plants such as California sagebrush (*Artemisia californica*), white sage *(Salvia apiana*), flat-top buckwheat (*Eriogonum fasiculatum*), broom baccharis (*Baccharis sarothroides*), wild onion (*Allium haematochiton*), laurel sumac (*Malosma laurina*), San Diego sunflower (*Viguiera laciniata*), golden-yarrow (*Eriophyllum confertiflorum*), sawtooth goldenbush (*Hazardia squarrosa*), yucca (*Yucca schidigera*, *Y. whipplei*), prickly pear cactus (*Opuntia occidentalis*), and scrub oak (*Quercus dumosa*), would have covered most of the hill and mountain areas with interspersed areas of native grasslands (*Stipa, Elymus, Poa, Muhlenbergia*) (Hall 2007; Munz 1974). Prior to historic and modern activities, larger drainages such as the San Timoteo Creek and Yucaipa Creek likely contained substantial stands of the riparian and/or oak woodland community with plants such as sycamore (*Platanus racemosa*), Fremont cottonwood (*Populus fremontii*), coast live oak (*Quercus agrifolia*), willow (*Salix* sp.), and poison oak (*Toxicodendron diversilobum*) (Munz 1974; Hall 2007). Many of the native plant species found in these vegetation communities and those found in the project vicinity are known to have been used by native populations for food, medicine, tools, and ceremonial and other uses (Barrows 1900; Bean 1972, 1978, Bean and Smith 1978; Bean and Siva Saubel 1972; Hedges and Beresford 1986). Major wildlife species found in this environment, prehistorically, were mule deer (*Odocoileus hemionus*), mountain sheep (*Ovis canadensis*), antelope (*Antilocapra americana*), coyote (*Canis latrans*), grizzly bear (*Ursus arctos*), mountain lion (*Felis concolor*), rabbit (*Sylvilagus audubonii*), and jackrabbit (*Lepus californicus*); reptiles such as western pond turtle (*Actinemys marmorata*), southern pacific diamondback rattlesnake (*Crotalus oreganus helleri*), gopher snake (*Pituophis melanoleucus catenifer*), and various rodents, the most notable of which are the valley pocket gopher (*Thomomys bottae*), California ground squirrel (*Otospermophilus beecheyi*), and dusky footed woodrat (*Neotoma fuscipes*) (Burt and Grossenheider 1976; Head 1972; Stebbins 1966). Rabbits, jackrabbits, and rodents were very important to the prehistoric diet; deer and mountain sheep, and, also, prehistorically, antelope) were significant for food, and were an important source of leather, bone, and antler (Bean 1972, 1978; Bean and Smith 1978).

2.2 CULTURAL SETTING

2.2.1 Prehistoric Period

2.2.1.1 Introduction

The Project is located approximately 1.25 miles south of Yucaipa Creek and 2.0 miles northeast of San Timoteo Creek in the San Gorgonio Pass area of northwesternmost Riverside County, California. Moratto (1984) has previously defined eight archaeological regions and 16 subregions for California. The location of the Project places it within the boundary of the San Diego subregion of the Southern Coast Region, but it is also located adjacent to the boundary with the Colorado River subregion of the Desert Region (Moratto 1984: 148, Figure 4.13). The following culture history outlines and briefly describes the known prehistoric cultural Traditions and chronology of archaeological sites in the vicinity of the Project. The approximately 10,000 years of documented prehistory of the region has often been divided into three periods: Early Prehistoric Period (San Dieguito Tradition [Warren 1968], Fluted Point Tradition [Moratto

1984]); Archaic Period (Milling Stone Horizon [Wallace 1955], Encinitas Tradition [Warren 1968]); and Late Prehistoric Period.

Prior to 1984, when Moratto defined the San Diego subregion, little archaeological investigation had occurred in the western Riverside and San Bernardino counties portion of this subregion. This paucity of archaeological information limited the ability of early researchers to assess the cultural and temporal associations for the archaeological resources in this part of the subregion. One of the few early studies to occur in this area prior to 1984 was conducted near Temecula in the early 1950s at a site identified as the ethnohistoric village of *Temeku* (McCown 1955). The investigation produced a substantial, primarily Late Prehistoric Period, artifact assemblage, but with some possible late Archaic materials as well. Another study, conducted in the 1970s, for the construction of the Perris Reservoir (O'Connell et al. 1974, eds.), consisted of investigations at several sites and was, perhaps, the most extensive study conducted in the area prior to 1984. The results, which included several radiocarbon dates, indicated a predominance of occupation at the sites during the Late Prehistoric Period, after A.D. 1500, but with some limited evidence for occupation as early 380 B.C. (Bettinger 1974:159-162). During the last approximately 35 years since 1984, several archaeological studies have occurred in western Riverside County and have served to substantially augment the archaeological record for the area (e.g., Applied Earth Works, Inc. 2001; Grenda 1997; Horne and McDougall 2008; Keller and McCarthy 1989; McCarthy 1986, 1987). Based on the information provided by these and other subsequent studies in the area, Sutton and Gardner (2010) and others have recently begun to define the early prehistory of this area of the San Diego subregion and how it fits in with the previously better-known areas of the subregion. The three chronological periods defined for the prehistory of the San Diego subregion are described below.

2.2.1.2 Early Prehistoric Period

The Early Prehistoric Period represents the time of the entrance of the first known human inhabitants into California. In some areas of California, it is referred to as the Paleo-Indian period, and is associated with the Big-Game-Hunting activities of the peoples of the last Ice Age occurring during the Terminal Pleistocene (pre-10,000 years ago) and the Early Holocene (beginning circa 10,000 years ago) (Erlandson 1994, 1997; Erlandson et al. 2007). In the western United States, the most substantial evidence for the Paleo-Indian or Big-Game-Hunting peoples derives from finds of large fluted spear and projectile points (Fluted-Point Tradition) at sites in places such as Clovis and Folsom in the Great Basin and the Desert southwest (Moratto 1984:79–88). In California, most of the evidence for the Fluted-Point Tradition derives principally from areas along the western margins of the Great Basin, including the eastern Sierras and the Mojave Desert, and in the southern Central Valley (Dillon 2002; Rondeau et al. 2007). Elsewhere in California, with the exception of site CA-LAK-36 in the north coast ranges in northwestern California, only isolated occurrences of fluted spear points have occurred, scattered around the state (Dillon 2002; Rondeau et al. 2007). These isolated occurrences have, however, included two fluted points or fluted point fragments recently discovered in the mountains of northern San Diego County approximately 51 miles to the south of the Project area (Kline and Kline 2007), and another along the coast approximately 52 miles to the west of the Project area in adjacent Orange County (Fitzgerald and Rondeau 2012). Two examples have also been discovered to the south in Baja California (Des Lauriers 2008; Hyland and Gutierrez 1995). Despite these isolated occurrences of fluted points in the San Diego subregion and Baja California, none have been found, to date, in the western areas of Riverside or San Bernardino counties area (Dillon 2002; Rondeau et al. 2007).

The earliest sites in the San Diego subregion, documented to be nearly 10,000 years old, belong to the San Dieguito Tradition (Warren et al. 1998; Warren and Ore 2011). The San Dieguito Tradition, with an

artifact assemblage distinct from that of the Fluted Point Tradition, has been documented mostly in the coastal and near coastal areas in San Diego County (Warren and True 1961; Rogers 1966; Warren 1966; True and Bouey 1990; Carrico et al. 1993) as well as in the southeastern California deserts (Rogers 1939; 1966; Warren 1967). The content of the earliest components of the C.W. Harris Site (CA-SDI-149), located along the San Dieguito River and approximately 68 miles to the south of the Project, formed the basis upon which Warren and others (Rogers 1966; Warren and True 1961; Warren 1966, 1967) identified the "San Dieguito complex," which Warren later reclassified as the San Dieguito Tradition (1968). This Tradition is characterized by an artifact inventory consisting almost entirely of flaked stone biface and scraping tools, but lacking the fluted points associated with the Fluted-Point Tradition. Diagnostic artifact types and categories associated with the San Dieguito Tradition include elongated bifacial knives; scraping tools; crescentics; and Silver Lake, Lake Mojave, and leaf-shaped projectile points (Knell and Becker 2017; Rogers 1939, 1966; Vaughan 1982; Warren 1966, 1967; Warren and True 1961). Some researchers interpret the San Dieguito Tradition/complex as having a primarily, but not exclusively, hunting subsistence orientation, but sufficiently hunting oriented as to be distinct from the more gathering-oriented complexes of traits that were to follow in the Archaic Period (Warren 1968; Warren et al. 1998). Other researchers see the San Dieguito subsistence system as less focused on hunting, and more diversified, and, therefore, possibly ancestral to, or a developmental stage for, the subsequent, predominantly gathering oriented, Encinitas Tradition, denoted in the San Diego area as the "La Jolla/Pauma complex" (True 1958, 1980) during the Archaic Period (cf. Bull 1983; Ezell 1987; Gallegos 1985, 1987, 1991; Koerper et al. 1991). While little definite evidence for the San Dieguito Tradition has been discovered in other coastal and near-coastal areas of southern California outside of San Diego County, some evidence has been recently been attributed to it in the eastern Mountains of San Diego County (Pigniolo 2005), and possibly in a coastal area approximately 53 miles to the west in Los Angeles County (Sutton and Grenda 2012).

2.2.1.3 Archaic Period

During the subsequent Archaic Period, artifact assemblages of the Milling Stone Horizon/Encinitas Tradition occur at a range of coastal and adjacent inland sites, and, in contrast to those of the previous Early Prehistoric Period, are relatively common in the study area region. These assemblages appear to indicate that a relatively stable, sedentary, predominantly gathering complex, possibly associated with one people, was present in the coastal and immediately inland areas of southern California for many millennia. Warren proposed that during the Archaic Period in the south coastal region, the Encinitas Tradition began circa 8,500 years ago and extended essentially unchanged until circa 1,500 years ago (Warren 1968; Warren et al. 1998). More recently, however, several sites in the southern California area have produced Milling Stone Horizon/Encinitas Tradition assemblages with radiocarbon dating in excess of 9,000 years ago (Horne and McDougall 2008; McDougall 2001). Consequently, the earliest extent of the Archaic Period in the area is still in the process of being determined.

Subsequent to the Early Archaic, beginning circa 4,800 years ago and continuing to as late as 1,300 years ago, a cultural assemblage, variously described as the Intermediate Horizon (Wallace 1955) or Campbell Tradition (Warren 1968), has been delineated and distinguished, following the Milling Stone Horizon/Encinitas Tradition. This assemblage, initially occurring somewhere north of San Diego and extending to Santa Barbara, is distinguished from earlier Archaic assemblages by the presence of large projectile points and milling tools such as the mortar and pestle. While still a matter of some debate, Warren and others (1998) have subsequently termed the time period encompassing the extent of the Intermediate/Campbell cultural assemblage in the southernmost coastal region as the Final Archaic Period.

In the western Riverside and San Bernardino counties area, Sutton and Gardner have identified Early Archaic Period assemblages at sites near Yucaipa, Fontana, and in the Prado Basin area (2010:26). Site CA-SBR-5096, located along the Santa Ana River in the Prado Basin area, has produced "manos and metates, a pinto point and an unknown number of cogged stones and discoidals" (Sutton and Gardner 2010:26). In the vicinity of the project area, site CA-SBR-1000 in the Yucaipa area contained an Early Archaic component consisting of many manos and metates but no mortars or pestles, numerous projectile points (including Pinto points), a few discoidals and cogged stones, and a flexed inhumation (Kowta 1969; Sutton and Gardner 2010:26). Archaeological studies conducted at several sites in Perris Valley for the Perris Reservoir project, approximately 11 miles to the southwest of the study area, produced a single radiocarbon date within the Archaic Period of circa 2200 years before present (B.P.) as well as a few diagnostic artifacts as the only evidence for a Late Archaic Period occupation at the sites (Bettinger 1974:159-162). Investigations at another site, CA-RIV-1806, in the mountains northwest of Temecula, also produced a radiocarbon date for the Late Archaic Period of circa 2775 B.P. (McCarthy 1986:73). More recently, large-scale archaeological investigations have been conducted in western Riverside County for the Eastside Reservoir (since renamed Diamond Valley Lake) Project, located approximately 21 miles south of the study area. This project involved reservoir construction within the adjacent Domenigoni and Diamond valleys (Robinson 2001; Goldberg 2001). Based on the results from this project, the researchers developed a local chronology specific to the Domenigoni and Diamond valleys based on projectile point style changes and associated radiocarbon dates (Robinson 2001). The terminology in this chronology resembles that already presented above by Warren et al. (1998) with the period from 9,500 to 7,000 years ago designated as the Early Archaic period, the period from 7,000 to 4,000 years ago as the Middle Archaic, and the period from 4,000 to 1,500 years ago as the Late Archaic. Only two components could be firmly dated to the Early Archaic at the reservoir sites, but sparse evidence of Early Archaic activity was noted in six other localities. One site (CA-RIV-5086) did, however, produce two radiocarbon dates of 9190±50 and 9310±60 B.P. (McDougall 2001). For the Middle Archaic, firm evidence was documented in 14 locations, with traces at four other sites. During the Late Archaic, a profusion of activity and occupation was evident, with 23 firmly dated site components and sparse evidence at eight other localities (Goldberg 2001:524).

Two other archaeological investigations conducted in the western Riverside County area have also produced evidence, based on radiocarbon dating, for prehistoric occupation during the earliest part of the Archaic Period. One of these investigations was conducted at archaeological site CA-RIV-2798, located approximately 28 miles to the southwest of the study area along the old shoreline of Lake Elsinore, a natural lake situated in a fault-created basin, whose principal source of water in prehistoric times was the San Jacinto River (Grenda 1997:3). The investigations produced results, including radiocarbon dating, that indicated occupation of the site as early as 8,500 years ago (Grenda 1997). Another investigation located inland, along the San Jacinto River, approximately 19 miles from Lake Elsinore, and approximately 11 miles south of the study area, produced results, including radiocarbon dating, indicating an early Archaic Period occupation, dating to circa 9,400 years ago (Horne and McDougall 2008). The early assemblages at these sites appeared to be consistent with Milling Stone Horizon/Encinitas Tradition content with milling and primarily (but not exclusively) gathering tools present. Thus, prehistoric occupation during the Archaic Period, in areas of western Riverside County and in the study area vicinity, is now documented to have occurred, beginning possibly as early as 9,400 years ago, and remained present to the end of the period, approximately 1,500 years ago.

This new evidence has prompted Sutton and Gardner (2010) to recently propose a reconceptualization of Warren's Archaic Period, Encinitas Tradition, including presenting a new pattern for the western Riverside and San Bernardino counties area, coexistent with the coastal Topanga complex/pattern in the

Los Angeles Basin area and La Jolla complex/pattern in the San Diego area. The authors termed this pattern the Greven Knoll pattern, based on a site with that name, CA-SBR-1000, containing an Archaic Period assemblage, located near the Project in the Yucaipa area (2010:26). This site was originally labeled as the Greven Knoll Site by Kowta (1969), and Kowta indicated that this term could also be used to represent the early inland Milling Stone Horizon in the area (Kowta 1969: Figure 5). The authors, therefore, chose to apply this designation for all of the inland Milling Stone Horizon/Encinitas Tradition patterns in the area but divided it into three phases labeled Greven Knoll I (early), Greven Knoll II, and Greven Knoll III. While this chronologic terminology essentially corresponds to the Early, Middle, and Late Archaic Period chronology defined by Robinson (2001), Sutton and Gardner have incorporated additional site data from a broader range of inland sites in the western Riverside and San Bernardino counties area, and have integrated the results into Warren's original (1968) more coastal based, Encinitas Tradition concept of a relatively stable, sedentary, predominantly gathering complex, possibly associated with one people.

2.2.1.4 Late Prehistoric Period

The beginning of the Late Prehistoric Period, circa 1,500 years ago, is seen as time-marked by a number of rather abrupt changes. The magnitude of these changes, and the short period of time within which they took place, are reflected in significant alteration of previous subsistence practices and the adoption of significant new technologies. As discussed further below, some of these changes may have been a result of significant variations in the climatic conditions. Subsistence and technological changes that occurred include a shift from hunting using atlatl and dart to the bow and arrow; a de-emphasizing of shellfish gathering along some areas of the coast (possibly due to silting-in of the coastal lagoons); and an increase in the storage of crops, such as acorns and pinyon nuts, by both Uto-Aztecan and Yuman peoples. Other new traits introduced during the Late Prehistoric Period include the production of pottery and cremation of the dead, and, locally, in the western Riverside County area, a shift in settlement pattern is apparent (cf. Wilke 1974).

This shift in settlement is first noted during the early part of the period from 1,500 to 750 years ago and is evidenced, locally, in the results from the Eastside Reservoir (Diamond Lake) Project by a rather sudden decline in occupation in the local area during the initial part of the period. This 750-year period was termed by the Eastside Reservoir researchers as the Saratoga Springs Period, following Warren's (1984) desert terminology. This period can also be seen to partially coincide with a warm and arid period known as the Medieval Warm Period, documented to have occurred between approximately 1,100 and 600 years ago (Jones et al. 1999; Kennett and Kennett 2000; Stine 1994). During this period, at least two episodes of severe drought have also been demonstrated, the first between 1060 and 840 cal B.P. and the second between 740 and 650 cal B.P. (Goldberg 2001; Stine 1994). While sites dating to this period are not absent in western Riverside County (e.g., McCarthy 1987:34; Keller and McCarthy 1989), Goldberg (2001) hypothesized that the Medieval Warm Period could account for the decline in sites occurring in the Eastside Reservoir Project area during the Saratoga Springs Period (1500 to 750 B.P.), claiming that desert and inland areas of western Riverside County, such as where the Eastside Reservoir Project and the current study area are located, would no longer be suitable to support residential bases. Goldberg (2001) further hypothesized that settlements would possibly be clustered at more suitable water sources during this time, such as at the coast, Lake Cahuilla, or Lake Elsinore (cf. Wilke 1974; 1978). While a decline was noted during the initial part of the Saratoga Springs Period, subsequently, during the latter part of the period, during the time of the Medieval Warm Period, a reoccupation began to occur (Goldberg 2001:578). According to Goldberg "When components dating to the Medieval Warm segment of the Saratoga Springs Period are segregated and combined with Medieval Warm components

from the Late Prehistoric Period, it shows that the frequency of refuse deposits and artifact and toolstone caches during the Medieval Warm is slightly higher than during the Late Archaic and much higher than during the later portion of the Late Prehistoric Period..." (2001:578).

In the Eastside Reservoir Project, the Late Prehistoric Period was defined as extending from the end of the Saratoga Springs Period (750 B.P.) to 410 B.P. A subsequent Protohistoric Period was also defined as extending from 410 to 150 B.P. The Late Prehistoric (750 to 410 B.P.) was characterized by the presence of Cottonwood points, although research indicated that Cottonwood points had begun to appear in the Eastside Reservoir Project study area as early as 950 B.P., ceramics and abundant obsidian began to appear around the time of the Cabrillo exploration in A.D. 1542 and so this date (i.e., circa 410 B.P.), until the establishment of the mission system in the late 1700s, was defined as the Protohistoric Period (Robinson 2001). It should also be noted that the end of the Saratoga Springs Period and the beginning of the Late Prehistoric Period, 750 B.P., also coincides with the onset of the Little Ice Age, generally dated from 750 to 150 B.P. (Goldberg 2001; Sutton et al. 2007). During this period, the climate was cooler and moister, and the sites identified within the Eastside Reservoir Project study area reflected a substantial increase in number and diversity, longer occupation periods, and more sedentary land use. Similar intensification of land use also occurred during this time in neighboring San Gorgonio Pass (Bean et al. 1991) and Perris Valley (Wilke 1974).

Differing from the terminology used in the Eastside Reservoir study, the Late Prehistoric Period has been more commonly described, archaeologically, in the northern San Diego County and the western portion of Riverside County, as the San Luis Rey (SLR) complex. As originally defined by Meighan (1954), the SLR complex is associated with the ethnographic Luiseño, who were present in the area at the time of the first contact with Europeans. Meighan saw the complex as occurring in two phases: SLR I and SLR II, with the principal archaeological element distinguishing the two phases being the absence of pottery in SLR I sites and its presence in SLR II assemblages. The introduction of pottery was seen as having disseminated to the prehistoric Luiseño from their neighbors, the Kumeyaay, to the south (Rogers 1936; Meighan 1954:221). Elements of the SLR I phase include small, triangular, pressure-flaked projectile points (generally Cottonwood series with Desert Side-notched series points rarely occurring); milling implements, including mortars and pestles, manos and metates, and bedrock milling features; bone awls; Olivella shell beads; other stone and shell ornaments; and cremations (Meighan 1954; Moratto 1984; True et al. 1974; Pigniolo 2004). In addition to pottery, the later SLR II assemblages include several other elements not found in SLR I assemblages: "cremation urns, red and black pictographs, and such nonaboriginal items as metal knives and glass beads" (Meighan 1954:223). SLR I was originally thought by Meighan to date from A.D. 1400 to A.D. 1750, with SLR II dating between A.D. 1750 and A.D. 1850 (Meighan 1954:223). This chronology was subsequently revised, however, by True and others, who suggested that, while "some pottery probably filtered across from Diegueño [Kumeyaay] territory perhaps as early as A.D. 1200-1300 under some circumstances, ...the introduction of pottery as a regular and important element in the San Luis Rey lifeway probably did not take place until a century or two before the arrival of the Spanish (perhaps A.D. 1500-1600)" (True et al. 1974:97). It is of interest to note, regarding the origin of pottery with the Cahuilla, that rather than them having acquired it from either the Kumeyaay or their Takic neighbors, the Luiseño, Bean and Lawton (1992:5) state that "Cahuilla pottery was probably borrowed from the Colorado River Indians to the east at a relatively late date". In regard to the Serrano, Johnston (1980:7) states that they were "prolific" pottery makers and indicates that some Serrano wares (e.g., black-on-buff ware) occurred in Serrano territory more commonly in proximity to Cahuilla territory, probably indicating "intermingling of technique and design because it is also found among Cahuilla ware" suggesting an exchange of the ceramic technology between the groups.

2.2.2 Ethnohistory

While Kroeber (1925:Plate 57), indicates the study area as located at the boundary of the territories of two Native American tribal peoples, the Cahuilla and the Serrano, Bean (1978) indicates the location to be well within Cahuilla territory. Both tribal groups are of the Takic family of the Uto-Aztecan stock (Shipley 1978; Miller 1984). These Takic-language-speaking groups are thought to represent a migration into the area occurring approximately 1,500 B.P. (Schaefer 2006:21). While, due to a lack of data at the time of European contact, the boundaries of Serrano territory are not well-defined (Bean and Smith 1978). Based on what is known, they occupied the San Bernardino Mountains east of the Cajon Pass, north to Victorville, east to Twentynine Palms, and south to the Yucaipa Valley (Bean and Smith 1978:570). The Cahuilla territory included a portion of the southern San Bernardino Mountains, as well as portions of the San Jacinto and Santa Rosa Mountains, and extended into the desert and the Coachella Valley in the northern part of the Salton Basin. The names for the Cahuilla and Serrano, are both likely of Spanish origin. "Serrano" in Spanish equates to "mountaineer" or "highlander" (Kroeber 1925; Bean and Smith 1978:570). According to Strong (1929:36), "The derivation of the term Cahuilla is obscure, and it is regarded by the Indians to be of Spanish origin." It has been suggested that it possibly derives from their own word *Káwiya*, which translates as 'master or boss' (Bean 1978:575; Kroeber 1925:693). While the first Spanish contact with the Serrano is indefinite, the earliest Spanish contact with the Cahuilla may have been with the Anza expedition trips in 1774 and 1777. The route followed San Felipe Creek west through Borrego Springs, up into the San Jacinto Mountains (Pourade 1962:164; Schaefer 2006:23).

The diversity of Cahuilla territory reflected the range of environmental habitats in inland Southern California. Topographically, their territory ranged from the summit of the southern San Bernardino Mountains, in excess of 11,000 feet, to the Coachella Valley and Salton Sink, well below sea level. Ecological habitats included the full range of mountains, valleys, passes, foothills, and desert areas. Villages were typically situated in canyons or on alluvial fans near water and food resources, and a village's lineage owned the immediately surrounding land (Bean 1978). Well-developed trails were used for hunting and traveling to other villages. Village houses ranged from brush shelters to large huts 15 to 20 feet long. Important plant foods exploited from the Cahuilla's diverse habitat included mesquite and screw beans, piñon nuts, and various cacti. Other important plant foods included acorns (six oak varieties), various seeds, wild fruits and berries, tubers, roots, and greens. Women were instrumental in the collection and preparation of vegetal foods. The material culture of the Cahuilla included implements such as baskets and pottery, bow and arrows, awls, arrow shaft straighteners, bags and storage pouches, stone pipes, musical instruments, nets, and costumes were made of plant fibers, stone materials, wood, bone, and shell (Bean 1978).

The Cahuilla recognized two nonpolitical and nonterritorial moieties: The wildcats (*túktem*) and coyotes (*ʔístam*) (Bean 1978:580); *tukut* and *isil* (Gifford 1918:186). The moieties were exogamous - marriage took place to a person of the opposite moiety and patrilocal with patrilinear lines of descent, with the woman going to live with the husband but remaining a member of the moiety into which she was born. The moieties were divided into numerous localized political-religious clans (often referred to as localized groups, kins, bands, or sibs), with the name of the clans frequently translated as "living at 'such a place'" (Bean 1972; Gifford 1918). Clans were autonomous from one another and commonly owned well-defined territories.

When Lake Cahuilla was present, it undoubtedly affected the settlement and subsistence patterns, with the desert area becoming a more productive resource area. Schaefer (2006:22) states that "Cahuilla

mythology and oral tradition also indicate that when Lake Cahuilla dried up, it was the mountain people who resettled the desert floor. The time of Lake Cahuilla is also best documented in the oral traditions of the Cahuilla, both with regard to settlement patterns, song cycles, and the effects of Lake Cahuilla on patrilineal clan segmentation."

The impact of the Spanish mission system and colonization along the coast was much less immediate and profound within the isolated desert and mountain groups. It was not until 1819, after the establishment of the San Bernardino estancia and cattle ranch at San Gorgonio, that a more direct Spanish influence was felt. During the Spanish period and into the Mexican period, political leadership became more centralized, as Juan Antonio from the Mountain Cahuilla and Chief Cabazon in the desert emerged as central figures (Strong 1929). Juan Antonio's group played a significant role during the Mexican-American War, siding with the Mexicans against the Luiseño who supported the American invasion (Phillips 1975). Along with the rise of powerful chiefs and political restructuring, Mexican language, clothing, and food were incorporated into traditional culture during this era.

With the 1848 signing of the Treaty of Guadalupe Hidalgo, the American government promised to preserve the liberty and property of the inhabitants of California, and in 1852, a treaty was drafted to settle land rights issues for the Cahuilla (as well as Serrano and Luiseño). The treaty was never ratified by Congress and the best farming and grazing lands were claimed by Euro-American settlers. In addition, Cahuilla land was substantially reduced during the 1860s and 1870s, primarily as a result of two Executive Orders establishing reservations. The result of this was a checkerboard of 48 sections of reservation lands spread across the eastern edge of the Santa Rosa and San Jacinto mountains and the Coachella Valley (CSRI 1983). Although various modifications have occurred over time, this has remained the permanent home of the Cahuilla to date.

Because the San Bernardino Mountains were the central home of the Serrano, villages were primarily located in the forest; however, many were located in the foothills and a few on the desert floor (Strong 1929; Bean and Smith 1978). The primary factor for village choice was proximity to a year-round water source (Bean and Smith 1978:571). Like the Cahuilla, the Serrano subsisted by hunting and gathering practices, making use of resources available in the natural environment. As with the Cahuilla, the Serrano had access to several diverse resource areas, including montane, foothill, and desert habitats. Foothill areas and desert locales provided vegetal resources, such as mesquite and screw beans, piñon nuts, yucca, and various cacti. Other important plant foods included acorns; various seeds, particularly chia (*Salvia columbariae*); wild fruits and berries; tubers, roots; and greens. Women were instrumental in the collection and preparation of vegetal foods, while men were responsible for the hunting of game. Principal game animals included deer, mountain sheep, antelope, rabbits, rodents, and quail. Larger game were obtained using bow and arrow with traps, snares, throwing sticks, and deadfalls were used to procure smaller game and birds (Bean and Smith 1978:571). According to Bean and Smith, the material culture of the Serrano was similar to their neighboring tribes, in particular, that of the Cahuilla, and included implements such as baskets and pottery, bow and arrows, awls, arrow shaft straighteners, bags and storage pouches, stone pipes, musical instruments, nets, and costumes were made of plant fibers, stone materials, wood, bone, and shell (1978).

The Serrano social organization and cosmology were largely the same as their neighbors the Cahuilla, with the social organization consisting of exogamous moieties, patrilineal clans, and ceremonial exchange parties. As with the Cahuilla, the Serrano recognized two nonpolitical and nonterritorial moieties: The wildcats (*tukʷutam*) and coyotes (*wahiʔiam*) (Bean and Smith 1978:572); *tukum* and *wahilyam* (Gifford 1918:178). The moieties were exogamous—marriage took place to a person of the

opposite moiety—and patrilocal with patrilineal lines of descent, with the woman going to live with the husband but remaining a member of the moiety into which she was born. The moieties were divided into numerous localized political-religious clans (often referred to as localized groups, kins, bands, or sibs), with the name of the clans being associated with a particular location or place. Clans were autonomous from one another and commonly owned well-defined territories (Bean 1972; Bean et al. 1991; Gifford 1918).

Both ethnographic sources (Bean 1978; Bean and Smith 1978), as well as archaeologists (Koerper et al. 2002:64; True 1990), have indicated that water sources, such as larger drainages and springs, were the major determinants for the location of prehistoric settlement. In the vicinity of the study area, Kroeber identifies three ethnohistoric villages, one to the north, along Yucaipa Creek, the village of *Yukai-pa-t* (Yucaipa); another to the south, the village of *Aka-va-t*, along the upper reaches of San Timoteo Creek; and the third to the west, along San Timoteo Creek, the village of *Tokloka-bi* (Kroeber 1925:Plate 57). Kroeber indicates that the villages of *Yukai-pa-t* and *Tokloka-bi* were Serrano villages, and, while he plots the village of *Aka-va-t* in Cahuilla territory (1925:Plate 57), he indicates that Serrano also lived there (1925: 617). The village of *Yukai-pa-t (Yukaipa't, Yucaipa)* has been associated by some archaeologists with the archaeological site CA-SBR-1000 (Sutton and Gardner 2010:26).

2.2.3 Historical Background

2.2.3.1 Spanish Period

The beginning of the historic period in southern California is generally given as 1769. In the mid-eighteenth century, Spain had escalated its involvement in Las Californias from exploration to colonization (Weber 1992), and in that year, a Spanish expedition headed by Gaspar de Portolá and Junípero Serra established the Royal Presidio of San Diego. Portolá then traveled north from San Diego, seeking suitable locations to establish military presidios and religious missions in order to extend the Spanish Empire into Alta California.

The first Spaniard to visit what is now Riverside County was Don Pedro Fages, the commander at the San Diego presidio, in 1772. In the pursuit of deserted soldiers, Fages traveled from San Diego east to the desert in Imperial County, then northwest through the San Jacinto Mountains and the San Jacinto Valley towards Riverside (Lech 2004). However, the first documented Spanish contact in what is now Riverside County was by Spanish military captain Juan Bautista de Anza, who led expeditions in 1774 and 1775 from Sonora to Monterey (Bolton 1930). Anza embarked on the initial expedition to explore a land route northward through California from Sonora, with the second expedition bringing settlers across the land route to strengthen the colonization of San Francisco (Rolle 1963). Anza's route led from the San Jacinto Mountains northwest through the San Jacinto Valley, which was named "San José" by Anza. Little documentation exists of Anza's route being used after the two expeditions, although it was likely used to bring Spanish supplies into the newly colonized Alta California (Lech 2004). In 1781, the Spanish government closed the route due to uprisings by the Yuman Indians. However, by that time, the missions were established and self-sufficient; thus, the need for Spanish supplies from Sonora had begun to diminish.

Although Riverside County proved to be too far inland to include any missions within its limits, Missions San Juan Capistrano and San Luis Rey de Francia, established in 1776 and 1798 respectively, claimed a large part of southwestern Riverside County. Due to the inland geographical location of the Cahuilla territory, the Spanish missions did not have as direct an effect on them as they did on the Luiseño, who

lived along the coast (Bean 1978). On the coast, the Luiseño were moved into the Mission environment where living conditions and diseases promoted the decline of the Luiseño population (Bean and Shipek 1978). However, throughout the Spanish Period, the influence of the Spanish progressively spread further from the coast and into the inland areas of southern California, as Missions San Luis Rey and San Gabriel extended their influence into the surrounding regions and used the lands for grazing cattle and other animals.

In the 1810s, ranchos and mission outposts called asistencias were established, increasing the amount of Spanish contact in the region. Asistencias were established in Pala in 1818 and San Bernardino in 1819. Additionally, Rancho San Jacinto was established for cattle grazing in the San Jacinto Valley (Bean and Vane 1980; Brigandi 1999). In 1820, Father Payeras, a senior mission official, promoted the idea that the San Bernardino and Pala asistencias be developed into full missions in order to establish an inland mission system (Lech 2004). However, Mexico won its independence from Spain in 1821, bringing an end to the Spanish Period in California.

2.2.3.2 Mexican Period

Although Mexico gained its independence from Spain in 1821, Spanish patterns of culture and influence remained for a time. The missions continued to operate as they had in the past, and laws governing the distribution of land were also retained in the 1820s. By 1830, the San Gabriel Mission began to relocate the San Bernardino asistencia to a new location, beginning to build 14 adobe structures. However, with the secularization of the mission in 1834, the construction was stopped, and the asistencia was abandoned. Following the secularization of the missions in 1834, large ranchos were granted to prominent and well-connected individuals, ushering in the Rancho Era, with the society making a transition from one dominated by the church and the military to a more civilian population, with people living on ranchos or in pueblos. With the numerous new ranchos in private hands, cattle ranching expanded and prevailed over agricultural activities.

In order to obtain a rancho, an applicant submitted a petition containing personal information and a land description and map (*diseño*). In 1841 Antonio Maria Lugo petitioned for a land grant for his three sons, as well as one of their friends: José del Carmen Lugo, José Maria Lugo, Vicente Lugo, and Diego Sepulveda. The land was granted to them in 1842 by Governor Juan B. Alvarado, to Antonio Lugo, his sons, and his nephews. The boundaries of this Rancho included the present-day cities of San Bernardino, Fontana, Rialto, Redlands, and Colton, with its southern boundary just past the edges of Gucaypa Canon, now known as Yucaipa Canyon. Another rancho, Rancho San Jacinto y San Gorgonio (also known as Rancho San Timoteo and Rancho Yucaipa), was given to James Johnson, a rarity as he was an English trader. Having moved to Alta California in 1833, he married Maria del Carmen Guirard and received the Rancho from Governor Manuel Micheltorena in 1843. Johnson proceeded to sell the lands to Louis Rubidoux in 1845. The northern boundary was the San Timoteo Canyon, and its western boundary was the San Gorgonio Creek.

2.2.3.3 American Period

American governance began in 1848, when Mexico signed the Treaty of Guadalupe Hidalgo, ceding California to the United States at the conclusion of the Mexican–American War. California's acquisition by the United States substantially increased the growth of the population in California. The California gold rush, the end of the Civil War, and the passage of the Homestead Act implementing the United States' "manifest destiny" to occupy and exploit the North American continent brought many people to

California after 1848. While the American system required that the newly acquired land be surveyed prior to settlement, the Treaty of Guadalupe Hidalgo bound the United States to honor the land claims of Mexican citizens who were granted ownership of ranchos by the Mexican government (Lech 2004). The Land Act of 1851 established a board of commissioners to review land grant claims, and land patents for the land grants were issued from 1876 to 1893.

A claim for Rancho San Bernardino was filed with the Public Lands Commission in 1852, and was granted to José del Carmen Lugo, José María Lugo, Vicente Lugo, and Diego Sepulveda in 1865. By that time, however, they had sold it to members of the Church of Latter-day Saints in 1851. Similarly, a claim for Rancho San Jacinto y San Gorgonio was filed with the Public Lands Commission in 1852, though the grant was not patented to Louis Rubidoux until 1872, four years after he had died and his widow had sold the rancho to James Singleton. Singleton sold the southern half of the property to Newton Nobel in 1869, who lost it to creditors in 1877, leading to its purchase by Frank Clough. In 1911, the southern half was purchased by the half-brothers William Singleton and James Haskell, uniting the rancho once again.

Initially, southern California was divided into only two counties: Los Angeles and San Diego. In 1853, San Bernardino County was added, placing it in what is now Riverside County, primarily within San Diego County and partially within San Bernardino County. Orange County was divided from Los Angeles County in 1889, and Riverside County was formed in 1893. Southern California, as we know it today, was developed by Americans and other immigrants who migrated to the western frontier in pursuit of gold and other mining, agriculture, trade, and land speculation (Lech 2004).

The federal government determined that the construction of a railroad route towards the Pacific coast was necessary despite the then success of stagecoach transportation of gold, people, and mail. Surveys were conducted in the 1850s to determine the best railroad route (Lech 2004). The Pacific Railroad Survey began in 1853 and ended with the San Gorgonio Pass chosen in 1854 as the best route into California. The Pacific Railway Act of 1862 (12 Statutes at Large, 489), officially entitled “An ACT to aid in the construction of a railroad and telegraph line from the Missouri river to the Pacific Ocean, and to secure the government the use of the same for postal, military, and other purposes,” granted 10 square miles per 1 mile of railroad track laid, with the amending Pacific Railroad Act passed in 1864, resulting in the subsidy being raised to 20 square miles. This land subsidy made the Southern Pacific Railroad Company, incorporated in 1865 and consolidated in 1870, owner of one-quarter of the private land in the state of California at that time (Lech 2004). The Southern Pacific Railroad Company began construction of a railroad route traversing the state southward in the 1870s, and the construction of the Southern Pacific Railroad reached San Timoteo Canyon and the summit of the San Gorgonio Pass in September of 1875 (Fickewirth 1992; Lech 2004: Map 9).

In the early 1880s, the California Southern Railway, a subsidiary of the Atchison, Topeka and Santa Fe Railway (Santa Fe), was completed and allowed for travel through the Cajon Pass to Barstow to a junction of the Atlantic and Pacific Railroad, and down to San Diego through western Riverside County. In 1887, Santa Fe officials consolidated their family of railroads in southern California, forming the California Central Railway. Although the California Southern remained an individual subsidiary at that time, it consolidated with the California Central Railway and the Redondo Beach Railway two years later 1889. The resulting corporation was the Southern California Railway Company, wholly owned by Santa Fe (Price 1988). In 1906, all of the Southern California Railway Company lines were deeded to the Atchison, Topeka and Santa Fe Railway Company.

The San Bernardino and Riverside County areas developed along with the railroads. The trains were used to transport settlers into the area, creating a period of agricultural and land development, ultimately resulting in the establishment of Riverside County in 1893, formed from portions of San Bernardino and San Diego counties.

2.2.3.4 Calimesa

The City of Calimesa began as a small rural town consisting of single-family homes and ranches (Calimesa Chamber of Commerce 2020; City of Calimesa 2014). When U.S. Route 99 was completed in the 1930s, businesses opened in the area, and the town began to differentiate itself from the nearby town of Yucaipa. In 1929, residents of the town sought to apply for its own post office – a contest was held to select the name for the new town, and Calimesa was selected from about 100 other names (Calimesa Chamber of Commerce 2020; City of Calimesa 2014).

In the late 1930s and early 1940s, the Calimesa Improvement Association, Inc. was formed with the purpose to develop and improve Calimesa and the surrounding community (Calimesa Chamber of Commerce 2020). Shortly after this, a community center was built in a park that had been purchased for a well by the South Mesa Water Company. By the mid-1960s, the Calimesa Improvement Association became the Calimesa Chamber of Commerce (Calimesa Chamber of Commerce 2020). The City of Calimesa was incorporated on December 1, 1990 (City of Calimesa 2014).

3.0 METHODS

HELIX requested a records search of the study area (APN 411-210-024) from the Eastern Information Center (EIC) at the University of California, Riverside on December 3, 2020. Due to the COVID-19 pandemic, the EIC has reduced its staff and changed its record search policies and procedures. To accommodate these changes, the records search request encompassed the study area and a half-mile search radius around the study area (EIC search area) to identify the previously recorded cultural resources and cultural resources studies that relate to the project. The results of the record search include the bibliographic data relating to the resources and previous studies conducted within the EIC search area, and copies of any reports or site forms that are located within the EIC search area. However, the map illustrating the location of the resources and previous studies is omitted from the record search. The results of the EIC record search were completed and received on March 22, 2021. In addition, HELIX reviewed the historic maps and aerial photographs to assess the potential for historic archaeological resources within the project site.

The Native American Heritage Commission (NAHC) was contacted on December 8, 2020, for a Sacred Lands File search and list of Native American contacts, which were received on December 22, 2020. HELIX sent letters on February 5, 2021, to the contacts listed by the NAHC to scope for additional information regarding tribal resources within the study area that may not be listed on any formal databases. Native American correspondence is included as Confidential Appendix C to this report.

A pedestrian field survey of the study area was directed by HELIX archaeologist Julie Roy, with participation from HELIX archaeologists Kent Smolik, Allana O'Connor, Kassie Sugimoto, Ricky Vallejos, and a Native American monitor from the Morongo Band of Mission Indians, Lerae Necochea, on February 16, 2021. The study area was surveyed in parallel transects, spaced approximately 10 to 15 meters (m) apart. Site P-33-015300 was revisited on December 8, 2021, by HELIX archaeologist Trevor

Gittelhough to assess the condition of the poles and to assess the presence or absence of historic date stamps on the poles.

4.0 RESULTS

4.1 RECORDS SEARCH

4.1.1 Previous Surveys

The records search results identified 19 previous cultural resource studies within the record search limits (Table 1, *Previous Studies within a Half-Mile of the Study Area*). One study, RI-06263 (Ahmet and Chandler 2005), studied the project site. RI-06263 consisted of a Phase I archaeological survey, which included an EIC record search, literature review, and a pedestrian survey. The investigation identified one historic resource, P-33-015299, as discussed below. No other previous studies overlap with the project site. The remaining 18 studies are comprised of archaeological surveys, a historical resource investigation, an architectural evaluation, and one report containing the results of archaeological monitoring. The results of the record search are provided in Appendix B.

Table 1
PREVIOUS STUDIES WITHIN A HALF-MILE OF THE STUDY AREA

Report Number (RI-)	Year	Author	Report Title
00950	1980	William Breece	Archaeological Survey of the Covinton Brothers Calimesa Project Area, Riverside and San Bernardino Counties, California
01095	1981	Adella Schroth and Marie Cottrell	Archaeological Assessment of Singleton Ranch, Near Calimesa Riverside County, California
02493	1989	Michael E. Macko	Results of an Intensive Cultural Resources Survey of a 120 Acre Parcel Near Calimesa, Riverside County, California

* Overlaps project area/APE

4.1.2 Previously Recorded Resources

The EIC record search contained 17 previously recorded cultural resources within a half-mile radius of the project site (Figure 5, *Resources within a Half Mile*, provided in Appendix B). However, 11 of these resources were identified in error and are located outside of the half-mile search radius. As such, only six resources are located within a half-mile radius of the project site (Table 2, *Previously Recorded Resources Within Half Mile of the Study Area*). Of these six resources, one resource, P-33-015300, is recorded within the project site, and one resource, P-33-015299 (Ahmet 2005a), was identified adjacent to the project footprint, within the study area. P-33-015299 is a historic isolate containing two glass bottle fragments and a scattering of porcelain plate fragments located within the northern half of APN 411-210-024. The glass fragments were identified by ECORP Consulting in 2006 during a pedestrian survey conducted in support of a Phase I archaeological study (Ahmet and Chandler 2005). The parcel was cleared of vegetation prior to the 2006 pedestrian survey, which facilitated the visibility of the site surface during the survey. The two glass bottles and porcelain plate fragments were observed on the surface within the northern half of the parcel, outside of the development footprint. P-33-015300 (Ahmet 2005b) was recorded as an electric utility line held up by eight wooden poles that were erected in 1940. The site is located within the project area, along Seventh Street, and extends from the fast-food outlet to the intersection of Villa Calimesa Lane.

The remaining four resources located within a half-mile of the project site consist of a historic site with a water retention feature (P-33-013993); a historic site containing a structural foundation (P-33-013995); a historic site containing a single-family residence, detached garage, and a wood barn (P-33-016792); and a historic site containing a two-story vernacular farmhouse, a secondary two-story vernacular barn/residence, a wooden chicken coop, and a corrugated metal barn (P-33-016793). These four sites reside west of I-10. P-33-013993 and P-33-013995 are located south of the project site, situated south of Sandalwood Drive. P-33-016792 and P-33-016793 are located north of the project site, near the residential communities located north of Villa Calimesa Lane. The EIC record search did not identify any prehistoric resources within a half-mile of the project site. Furthermore, no historic resources have been identified within the development footprint.

Table 1
PREVIOUSLY RECORDED RESOURCES WITHIN A HALF-MILE OF THE STUDY AREA

016793	-	Historic	Building	Ben Taniguchi, Laura Gallegos, and Christeen Taniguchi, 2006

* located within the project site

4.1.3 P-33-015299

P-33-015299 (Ahmet 2005a) is described as a historic isolate located outside of the project site but within the study area. The isolate consists of two sun-colored amethyst glass fragments observed within a 40-foot-area. The first item is a bottle-top fragment made of ¼ inch thick glass. The bottle fragment measured one inch in diameter and contained a conical opening for a cork stopper. The second fragment is part of a bottle base measuring 1 by ¾ by 1/8 inch thick. These two glass bottle fragments appear to belong to a single bottle. The sun-colored amethyst glass dates from 1880 to 1914 (Ahmet and Chandler 2005; Kendrick 1971). White porcelain plate fragments were also observed around the bottle fragments and across the area, but the plate fragments were too small to be positively dated.

4.1.4 P-33-015300

P-33-015300 (Ahmet 2005b) is described as eight historic utility poles, located within the project site and study area. This site consists of a segment of an electrical utility line held up by eight wooden poles that run north-south along the east side of Seventh Street, initiating at the fast-food outlet and continuing north to the intersection of Seventh Street and Villa Calimesa Lane. Five of the eight poles have date stamps consisting of circular date tags with "40" and "50" embossed on them. These pins indicate that the poles were erected in 1940 and then inspected a decade later. One other pole has a

date stamp of 1950, and two other poles are recent replacements. This electrical line is probably part of a much larger linear network that extends throughout the Calimesa area.

4.2 OTHER ARCHIVAL RESEARCH

Various additional archival sources were also consulted, including historic topographic maps and aerial imagery. These include historic aerials from 1938, 1959, 1966, 1967, 1968, 1969, 1972, and 1980 (NETR Online 2020) and several historic USGS topographic maps, including the 1901 Elsinore (1:125,000), the 1942 Perris (1:62,500), the 1953, 1967, and 1979 El Casco (1:24,000) topographic maps (USGS Topographic Map Explorer 2020). Bureau of Land Management General Land Office (GLO) Records were also consulted. The purpose of this research was to identify historic structures and land use in the area.

No buildings appear in the study area on the 1901 USGS 30' Elsinore quadrangle, but there are a few dirt roads present, and the "Southern Pacific R. R." is shown southwest of the study area. Some roads are present surrounding the study area, and a single structure is noted as being located to the west. The 1942 Perris map shows State Routes 70 and 99 to the east of the project site. The map also includes what appears to be an orchard or other agricultural area located to the north, and a river or stream to the south of the project. The 1953, 1967, and 1979 El Casco topographic maps show the development of Calimesa and the Yucaipa Valley. No buildings or structures are recorded within the study area in these topographic maps. No buildings or structures appear within the study area in the historical aerial photographs. However, the aerial photographs show the construction of Interstate 10, as well as Sandalwood Drive to the south and Seventh Street along the western boundary of the study area (NETR Online 2020).

Township 2 South, Range 2 West was surveyed in 1871 – the surveyors classified the area containing the project as "soil 2nd rate, good grazing" (GLO 1871). It was surveyed again in 1880, 1883, and 1897, with little change during that time. The western half of the study area was granted to Huston Kissee in 1893 under the authority of the May 20, 1862: Homestead Entry Original (12 Stat. 392), while the eastern half of the project was granted to John Rogers in 1891 under the authority of the April 24, 1820: Sale-Cash Entry (3 Stat. 566) (GLO 1891, 1983). In the 1871, 1880, and 1883 maps an "Indian village" is recorded in Section 21, approximately two miles southwest of the study area, along the edge of the section of San Timoteo Canon that also splits to runs on either side of the project site. These maps also show roads running to, and likely through, the project area.

4.3 NATIVE AMERICAN CONTACT PROGRAM

HELIX contacted the Native American Heritage Commission (NAHC) on December 8, 2020, for a Sacred Lands File search and a list of Native American contacts for the project area. The NAHC indicated in a response dated December 22, 2020, that the search results were negative, though the "absence of specific site information…does not indicate the absence of cultural resources in any project area." HELIX submitted letters to the Native American representatives and interested parties identified by the NAHC on February 5, 2021, to request any additional information regarding cultural resources that may not be documented at the EIC or on the Sacred Lands File. Three responses have been received to date (Table 3, *Native American Contact Program Responses*).

The San Manuel Band of Mission Indians submitted an email on February 12, 2021, to confirm that the project is located within Serrano ancestral territory, but the tribe had no further comments or information. However, the tribe may wish to pursue AB 52 consultation with the City. The Agua Caliente

Band of Cahuilla Indians responded on March 11, 2021, to request a cultural resources inventory of the project area by a qualified archaeologist prior to any development activities in this area, a copy of the records search with associated survey reports and site records from the information center, and copies of any cultural resource documentation (report and site records) generated in connection with the project. The tribe did not submit any additional comments or information relating to cultural resources within the project area. Lastly, the Fort Yuma Quechan Indian Tribe responded on February 8, 2021, to announce that they have no comments or information regarding cultural resources within the project area and they wish to defer to the tribes more local to the site. To date, no other tribes have responded; if any additional responses are received, they will be forwarded to the City of Calimesa staff. The results of the Native American correspondence are included as Appendix C (Confidential Appendices, bound separately).

Table 2
NATIVE AMERICAN CONTACT PROGRAM RESPONSES

Date of Response	Tribe	Name/Position	Summary of Response
2/12/2021	San Manuel Band of Mission Indians	Ryan Nordness, Cultural Resource Analyst	Email response indicating the proposed project is located within Serrano ancestral territory. However, the area is not of great concern to SMBMI and the tribe has no information to send over. SMBMI may be interested to consult whenever this project moves into AB52/CEQA territory.
2/8/2021	Fort Yuma Quechan Indian Tribe	Jill McCormick, THPO	Email response indicating the tribe has no comment on the proposed project. The tribe defers to more local tribes.
3/11/2021	Agua Caliente Band of Cahuilla Indians	Lacy Padilla, Archaeologist	Letter submitted via email stating the project site is within the Tribe's Traditional Use Area and, therefore, requests a cultural resources inventory of the project area by a qualified archaeologist prior to any development activities in this area, a copy of the records search with associated survey reports and site records from the information center, and copies of any cultural resource documentation (report and site records) generated in connection with this project.

4.4 SURVEY

A pedestrian survey of the study area was conducted on February 16, 2021, by HELIX staff archaeologists Julie Roy, Kent Smolik, Allana O'Connor, Kassie Sugimoto, and Ricky Vallejos. Lerae Necochea, a Native American monitor from the Morongo Band of Mission Indians, also participated in the survey. The study area was surveyed by walking in north-south transects spaced approximately 10 to 15m apart. The ground visibility was low to moderate, with most of the study area covered by low-lying vegetation (Plate 1). Visibility was greatest along the shoulder of the road (Plate 2). The terrain was flat from a past grading activity, apart from a drainage (culvert) located in a concave depression on the east side of the study area (Plate 3). All portions of the study area were inspected for cultural resources residing on the surface.

No cultural material was observed within the study area; however, as noted above, the study area was overlain by low-lying vegetation that inhibited ground visibility. However, the surveyors observed modern refuse throughout the entire parcel, concrete debris from old posts within the northern half of

the parcel (Plate 4), and a standing well cap located within the center of the study area along the western boundary (Plate 5). Although modern refuse was noted throughout the parcel, including the project site, the concrete debris and well cap were located outside the development footprint. As such, the results of the pedestrian survey did not identify any previously unrecorded historic or prehistoric artifacts or features on the surface of the project site.

The EIC record search identified two historic resources (P-33-015299 and P-33-015300) recorded within the study area. P-33-015299, located in the northern half of the parcel, outside of the development footprint, was recorded as two glass bottle fragments that date from 1880 to 1914 and a scattering of porcelain plate fragments that were too small to be dated. However, neither the glass bottle fragments nor the porcelain plate fragments were observed during the survey. Although it is possible that poor ground visibility hindered the detection of P-33-015299, it is more likely that these items have been disturbed by the grading activity conducted after their recordation in 2006.

Site P-33-015300 was revisited on December 8, 2021, by HELIX archaeologist Trevor Gittelhough to assess the condition of the poles and to assess the presence or absence of historic date stamps on the poles. The site was originally recorded in 2005 as eight electric utility poles, of which five poles contained historic date stamps dating to 1940, one pole dated to 1950, and two poles were not of historic age because they were recently replaced and lacked date stamps. The site was posited to be part of a larger extant transmission line that runs through Calimesa. However, Mr. Gittelhough identified a total of nine poles, five installed in 1940, one in 1950, and three installed post-2014. The newly observed conditions of Site P-33-015300 were recorded as a site update to the Department of Parks and Recreation (DPR) Primary Record Form (Provided in Appendix D, *Survey Results and DPR forms*) and submitted to the EIC by HELIX.

Of the nine poles that comprise site P-33-015300, only three poles reside within the project site: Pole 4639209E, Pole 1609885E, and Pole 1609884E (Figure 6, *Site P-33-015300,* provided in Appendix D). The three poles within the project site are designated for removal. Pole 4639209E is not of historic age because it is a recently replaced pole, residing on the northern boundary of the project site. Pole 1609885E is located immediately south of Pole 4639209E and is also a recently replaced pole. However, Pole 1609884E, located along the southwestern project site boundary, dates to 1940.

Of these two sites, neither will be adversely impacted by the project. P-33-015299 is located outside of the development footprint. Although site P-33-015300 resides within the development footprint and three poles are slated for removal during construction activities, only one pole is of historic age (Pole 1609884E). However, utility poles are not considered eligible historic resources under CEQA or historic properties under NHPA as individual resources. As such, the components of P-33-015300 are only considered as elements of a historic alignment. As long as the historic alignment is not changed, the poles can be replaced or removed as needed. Since the project will not be removing the alignment, but rather altering the alignment to underground, the project will not significantly or adversely impact site P-33-015300.

Plate 1. Overview of the project site, view to the south.

Plate 2. West side of the study area along Seventh Street, view to the south.

Plate 3. Drainage (culvert) located in the center of the study area along the eastern boundary, view to the east.

Plate 4. Concrete debris observed within the northern portion of the study area outside of the development footprint.

Plate 5. Well cap located in the center of the study area along the western boundary, view to the east.

5.0 SUMMARY AND MANAGEMENT RECOMMENDATIONS

HELIX conducted a study to identify cultural resources within the Sandalwood Commercial Development Project site and to determine the effects of the project on any known archaeological or historical resources. The study included a record search conducted through the EIC, a Sacred Lands File search, tribal outreach, literature and archival review, and a pedestrian survey of APN 411-210-024 (study area). However, the project will only develop the southern half of APN 411-210-024.

The EIC record search identified six previously recorded resources within a half-mile of the project site. To date, there are no known prehistoric sites or resources within a half-mile of the project site. All six resources identified by the EIC pertain to the historic era, consisting of historic sites, isolates, and structures. One resource is located outside the development footprint but is in proximity to the project site, within the study area, and one resource is located within the project area. P-33-015299, a historic

isolate consisting of two glass bottle fragments and a scattering of porcelain plate fragments, was recorded within the northern half of the parcel, outside the development footprint. A second resource, P-33-015300, is located within the development footprint, located along the east side of Seventh Street. P-33-015300 consists of nine wooden utility poles from 1940 and 1950. Three of the utility poles, Poles 4639209E, 1609885E, and 1609884E, are located within the project site and will be removed and relocated underground. Although P-33-015300 is recorded as an isolated resource, the wooden utility poles are probably related to a larger network of utility lines that has yet to be documented, recorded, and assessed.

When discussing electrical transmission and distribution facilities, their historic significance is generally determined, not by themselves, but by their association with other historically significant facilities such as the Hoover Dam (Taylor 2005). When such facilities are determined to be historically significant, it is the entire alignment that is significant and not individual elements, such as the utility poles themselves. Therefore, the replacement of individual elements, including wood poles, does not affect the significance of the line since the function of the line is maintained, and thus its association with the other historic facilities that give the alignment its significance (Taylor 2005). In addition, because wood poles are not architecturally or technologically distinct, the replacement of such elements does not impact the integrity of any transmission and distribution lines (Taylor 2005). Thus, the replacement or removal of these poles will not impact the integrity of the resource itself, as the function of the transmission line continues to be maintained. Since the project does not intend to alter or remove the alignment as a whole, the project will not cause a significant impact per CEQA or an adverse effect to a historic property per NHPA.

With the exception of P-33-015300, the pedestrian survey did not observe any cultural resources within the development footprint nor within the northern half of the study area. The two glass bottle fragments and porcelain plate fragments (P-33-015299) were not located during the pedestrian survey. Low-lying vegetation on the surface of the site may have hindered the ability to find the glass bottle and porcelain fragments. Conversely, these items may have been disturbed by past grading activities unrelated to the project. As such, the project will not impact P-33-015299.

The historic aerials and maps show the project site as remaining undeveloped. However, the surrounding area has been disturbed by nineteenth- and twentieth-century agricultural activities, irrigation systems, dirt road formation, and transportation (railway) and utility (transmission and gas line) installations. Sandalwood Drive and Seventh Street were developed by the early 1960s to provide access to a newly developed residential tract off C Street, located northwest of the project site. The lot south of the project site, currently the location of a fast-food restaurant, was developed in the late 1990s and early 2000s. Although the project site has remained undeveloped, the parcel has been graded to its existing setting.

A search of the Sacred Lands File did not identify any known sacred lands or tribal cultural resources. However, the NAHC indicated that their results do not preclude cultural resources within the project area. As per their recommendation, HELIX submitted letters to the Native American representatives and interested parties identified by the NAHC on February 5, 2021, to request additional information regarding cultural resources that may not be documented at the EIC or on the Sacred Lands File. To date, three tribes, the San Manuel Band of Mission Indians, the Agua Caliente Band of Cahuilla Indians, and the Fort Yuma Quechan Indian Tribe, submitted letters in response. However, no additional sites or resources were identified through HELIX's tribal outreach.

5.1 MANAGEMENT RECOMMENDATIONS

Based on the results of the current study, no archaeological or historic properties will be affected by the Sandalwood Commercial Development Project. Two historic isolates, two glass bottle fragments and porcelain plate fragments (P-33-015299), and a series of wooden utility poles (P-33-015300) are located within the study area. Site P-33-0015299 is mapped outside of the development footprint and will not be impacted by the project; in addition, this site was not reidentified during the current survey. Site P-33-015300 is comprised of nine utility poles, located within the development footprint, which are not considered historic resources individually, but elements of a larger historic alignment that extend throughout the Calimesa area. As it is the entire alignment that is considered historic (although not assessed as to eligibility for the CRHR or NRHP) and not the individual poles, any replacement or removal does not impact the historic nature or integrity of the site. As such, P-33-015300 will not result in a significant impact under CEQA, or be adversely impacted per NHPA, by the project.

The record searches and Native American outreach did not identify any prehistoric resources within a half-mile of the project site. However, the San Manuel Band of Mission Indians indicated that they may wish to consult with the City and provide additional information regarding tribal cultural resources during AB 52 consultation. If tribal cultural resources are identified during this consultation, such resources may require avoidance or mitigation measures. Furthermore, there is a potential for encountering buried archaeological resources during ground-disturbing activities, such as grading and excavating within native sediment. However, the project site has been previously disturbed by grading activities, and the chances of encountering intact cultural deposits are very low.

Several historic era resources relating to nineteenth- and twentieth-century agricultural and farming activities have been identified near the project site. Furthermore, P-33-015299 was identified within the same parcel as the proposed development. However, P-33-015299 was not identified within the parcel during the pedestrian survey. Due to past grading activities within the parcel, it is probable that the historic isolate, and any other potentially significant cultural deposit, have been disturbed or removed from the parcel.

While site P-33-015300 is located within the project site, it is the alignment as a whole and not the individual utility poles that would be considered historic. As the alignment will not be impacted by the project, and due to the level of past site disturbances, no further work is recommended. There is, however, a low probability of encountering intact cultural deposits during the project's development. However low, the chances of encountering cultural resources during ground-disturbing activities, such as grading, trenching for utilities, or excavating, cannot be dismissed. Inadvertent discoveries relating to nineteenth- and twentieth-century agricultural activities, irrigation systems, road formation, transportation (railway), and utility (transmission and gas line) installations may yield project-related impacts to cultural resources. As such, it is recommended that the project retain a qualified archaeologist to consult on any potential finds discovered during construction activities. In the event that additional cultural resources or sensitivities are identified through tribal consultation, this study recommends an archaeological and Native American monitoring program be implemented for ground-disturbing activities.

In the event that human remains are discovered, the County Coroner shall be contacted. If the remains are determined to be of Native American origin, the Most Likely Descendant, as identified by the NAHC, shall be contacted in order to determine proper treatment and disposition of the remains. All requirements of Health & Safety Code §7050.5 and PRC §5097.98 shall be followed.

Should the project limits change to incorporate new areas of proposed disturbances outside of the study area, an archaeological survey of these areas will be required to assess potential impacts to cultural resources.

Appendix A

Resumes

Mary Robbins-Wade, RPA

Cultural Resources Group Manager

Summary of Qualifications

Ms. Robbins-Wade has 41 years of extensive experience in both archaeological research and general environmental studies. She oversees the management of all archaeological, historic, and interpretive projects; prepares and administers budgets and contracts; designs research programs; supervises personnel; and writes reports. Ms. Robbins-Wade has managed or participated in hundreds of projects under the California Environmental Quality Act (CEQA), as well as numerous archaeological studies under various federal jurisdictions, addressing Section 106 compliance and National Environmental Policy Act (NEPA) issues. She has excellent relationships with local Native American communities and the Native American Heritage Commission (NAHC), as well as has supported a number of local agency clients with Native American consultation under State Bill 18 and assistance with notification and Native American outreach for Assembly Bill 52 consultation. Ms. Robbins-Wade is a Registered Professional Archaeologist (RPA) and meets the U.S. Secretary of the Interior's Professional Qualifications for prehistoric and historic archaeology.

Education

Master of Arts, Anthropology, San Diego State University, California, 1990

Bachelor of Arts, Anthropology, University of California, Santa Barbara, 1981

Registrations/ Certifications

Caltrans, Professionally Qualified Staff-Equivalent Principal Investigator for prehistoric archaeology, , Bureau of Land Management Statewide Cultural Resource Use Permit (California), permit #CA-18-35, , Register of Professional Archaeologists #10294, 1991

County of San Diego, Approved CEQA Consultant for Archaeological Resources, 2007 , Orange County Approved Archaeologist, 2016

Selected Project Experience

12 Oaks Winery Resort (2015 - 2018). Project Manager/ Principal Investigator for a cultural resources survey of approximately 650 acres for a proposed project in the County of Riverside. Oversaw background research, field survey, site record updates, Native American coordination, and report preparation. Met with Pechanga Cultural Resources staff to discuss Native American concerns. Worked with applicant and Pechanga to design the project to avoid impacts to cultural resources. Work performed for Standard Portfolio Temecula, LLC.

28th Street between Island Avenue and Clay Avenue Utilities Undergrounding Archaeological Monitoring (2014 - 2018). Project Manager/Principal Investigator for a utilities undergrounding project in a historic neighborhood of East San Diego. Responsible for project management; coordination of archaeological and Native American monitors; coordination with forensic anthropologist, Native American representative/Most Likely Descendent, and City staff regarding treatment of possible human remains; oversaw identification of artifacts and cultural features, report preparation, and resource documentation. Work performed for the City of San Diego.

Archaeological Testing for the F11 (2015 - 2017). Project Manager for a cultural resources study for a proposed mixed-use commercial and residential tower in downtown San Diego. Initial work included an archaeological records search and a historic study, including assessment of the potential for historic archaeological resources. Subsequent work included development and implementation of an archaeological testing plan, as well as construction monitoring and the assessment of historic archaeological resources encountered. Work performed for the Richman Group of Companies.

Blended Reverse Osmosis (RO) Line Project (2018 - 2019). Project Manager/ Principal Investigator for cultural resources monitoring during construction of a 24-inch recycled water pipeline in the City of Escondido. Oversaw monitoring program, including Worker Environmental Awareness Training; responsible for Native American outreach/coordination, coordination with City staff and construction crews, and general project management. Work performed for the City of Escondido.

Borrego Springs Community Library IS/MND (2015 - 2016). Cultural Resources Task Manager/ Principal Investigator for a cultural resources survey for a proposed development consisting of a public library, park, and police substation for the County of San Diego. The project is proposed on a 20.5-acre site on undeveloped land in the Borrego Springs community.

Buckman Springs Road Bridge Widening Technical Studies (2017 - 2020). Senior archaeologist for a cultural resources survey in support of the proposed Buckman Springs Road Bridge Widening Project, entails the rehabilitation and widening of the existing bridge crossing of Buckman Springs Road over Cottonwood Creek (Bridge No. 57C-0270). The project proponent is the County of San Diego Department of Public Works (DPW), with local assistance funding from the Federal Highway Administration. Provided senior technical oversight and quality assurance/quality control on deliverables.

Buena Sanitation District Green Oak Sewer Replacement Project (2016 - 2017). Project Manager/Principal Investigator for a cultural resources testing program in conjunction with a proposed sewer replacement project for the City of Vista. Oversaw background research, fieldwork, site record update, Native American coordination, and report preparation. Work performed for Harris & Associates, Inc., with the City of Vista as the lead agency.

Cactus II Feeder Transmission Pipeline IS/MND (2017 - 2018). Cultural Resources Task Lead for this project in the City of Moreno Valley. Eastern Municipal Water District proposed to construct approximately five miles of new 30-inch to 42 inch-diameter pipeline; the project would address existing system deficiencies within the City and provide supply for developing areas. Oversaw background research, field survey, and report preparation. Responsible for Native American outreach for cultural resources survey. Assisted District with Native American outreach and consultation under AB 52. Work performed under an as-needed contract for Eastern Municipal Water District.

Dale 2199C Pressure Zone Looping Pipeline Project (2019 - 2019). Cultural Resources Task Lead for this project in Moreno Valley. Eastern Municipal Water District proposed construction of a new pipeline to connect two existing pipelines in the District's 2199C Pressure Zone. The pipeline would consist of an 18-inch-diameter pipeline between Kitching Street and Alta Vista Drive that would connect to an existing 12-inch-diameter pipeline in the northern end of Kitching Street and to an existing 18-inch-diameter pipeline at the eastern end of Alta Vista Drive. The project will improve reliability and boost the Dale Pressure Zone's baseline pressure and fire flow availabilities. Four potential alignments were under consideration; three of these bisect undeveloped land to varying degrees, while the other is entirely situated within developed roadways. Oversaw background research and field survey. Responsible for Native American outreach for cultural resources survey and co-authored technical report. Work performed under an as-needed contract for Eastern Municipal Water District.

Downtown Riverside Metrolink Station Track & Platform Project (2019 -). Cultural Resources Task Lead for this project involving changes to and expansion of the Downtown Riverside Metrolink Station. Overseeing records search and background information, archaeological survey, and report preparation. Responsible for coordination with Native American Heritage Commission, Riverside County Transportation Commission (RCTC), and Federal Transportation Authority (FTA) on Native American outreach. Work performed for Riverside County Transportation Commission as a subconsultant to HNTB Corporation.

Emergency Storage Pond Project (2018 - 2018). Project Manager/Principal Investigator for a cultural resources testing program in conjunction with the Escondido Recycled Water Distribution System - Phase 1. Two cultural resources sites that could not be avoided through project design were evaluated to assess site significance and significance of project impacts. Work included documentation of bedrock milling features, mapping of features and surface artifacts, excavation of a series of shovel test pits at each site, cataloging and analysis of cultural material recovered, and report preparation. The project is located in an area that is sensitive to both the Kumeyaay and Luiseño people, requiring close coordination with Native American monitors from both groups. Work performed for the City of Escondido.

Escondido Brine Line Project (2018 - 2019). Project Manager/Principal Investigator for cultural resources monitoring during construction of approximately 2.3 miles of a 15-inch brine return pipeline in the City of Escondido. The project, which is part of the City's Agricultural Recycled Water and Potable Reuse Program, enables discharge of brine recovered from a reverse osmosis facility that is treating recycled water; it is one part of the larger proposed expansion of Escondido's recycled water distribution to serve eastern and northern agricultural land. The project is located in an area that is sensitive to both the Kumeyaay and Luiseño people, requiring close coordination with Native American monitors from both groups. Oversaw monitoring program, including Worker Environmental Awareness Training; responsible for Native American outreach/coordination, coordination with City staff and construction crews, and general project management. Work performed for the City of Escondido.

Fox Tank Monitoring (2018 - 2019). Principal Investigator and Project Manager for the cultural resources monitoring program during construction of the Fox Tank Project. Oversaw the cultural resources monitoring program, including coordination with the District and the Native American tribal cultural monitors regarding cultural resources encountered during monitoring and their ultimate disposition. Work performed under an as-needed contract for Eastern Municipal Water District.

Hacienda del Mar EIR (2016 - 2020). Senior Archaeologist for a proposed commercial development project for a senior care facility in Del Mar. Assisted in the preparation of associated permit applications and an EIR. Oversaw background research, updated records search and Sacred Lands File search, monitoring of geotechnical testing, coordination with City staff on cultural resources issues, and preparation of updated report. Prior to coming to HELIX, served as Cultural Resources Task Lead for the cultural resources survey for the project, conducted as a subcontractor to HELIX. Work performed for Milan Capital Management, with the City of San Diego as the lead agency.

Haymar Easement Protection Project (2020 -). Cultural Resources Task Lead/Principal Investigator for an emergency repair project to protect a trunk sewer and associated access path badly damaged by erosion. Overseeing cultural resources monitoring during construction in this highly culturally sensitive area, including coordination with Luiseño tribal monitors and City staff.

Judson Potable Water Storage Tank and Transmission Pipeline IS/MND (2016 - 2019). Cultural Resources Task Lead for this project in the City of Moreno Valley. Eastern Municipal Water District is proposing the construction and operation of a steel, 2.2-million-gallon (MG) potable water storage tank, approximately 2,300 linear feet of 18-inch-diameter transmission pipeline, a paved access road, a detention basin, and other appurtenances to support tank operations. Oversaw background research and field survey. Responsible for Native American outreach for cultural resources survey and co-authored technical report. Assisted District with Native American outreach and consultation under AB 52. Work performed under an as-needed contract for Eastern Municipal Water District.

Lilac Hills Ranch (2014 - 2017). Project Manager/Principal Investigator of a cultural resources survey and testing program for an approximately 608-acre mixed-use development in the Valley Center area. Oversaw background research, field survey, testing, recording of archaeological sites and historic structures, and report preparation. Responsible for development of the research design and data recovery program, preparation of the preservation plan, and Native American outreach and coordination. The project also included recording historic structures, development of a research design and data recovery program for a significant archaeological site, and coordination with the Native American community and the client to develop a preservation plan for a significant cultural resource. The project changed over time, so additional survey areas were included, and a variety of off-site improvement alternatives were addressed. Work performed for Accretive Investments, Inc. with County of San Diego as the lead agency.

Moulton Niguel Water District Regional Lift Force Main Replacement (2017 - 2018). Cultural Resources Task Lead/Principal Investigator for the replacement of a regional lift station force main operated by Moulton Niguel Water District (MNWD). The project comprises an approximately 9,200 linear foot alignment within Laguna Niguel Regional Park in Orange County, in an area that is quite sensitive in terms of cultural resources. HELIX is supporting Tetra Tech throughout the preliminary design, environmental review (CEQA), and final design, including permitting with applicable state and federal regulatory agencies. The cultural resources survey will inform project design, in order to avoid or minimize potential impacts to cultural resources. Oversaw background research and constraints analysis, Native American coordination, cultural resources survey, coordination with MNWD and Tetra Tech, and report preparation. Work performed for MNWD, as a subconsultant to Tetra Tech.

Murrieta Hot Springs Road Improvements Project (2018 - 2020). Principal Investigator/Cultural Resources Task Lead for cultural resources survey in support of an Initial Study/Mitigated Negative Declaration (IS/MND) for the widening of Murrieta Hot Springs Road in the City of Murrieta. The project would widen or restripe Murrieta Hot Springs Road between Winchester Road and Margarita Road from a 4-lane roadway to a six-lane roadway to improve traffic flow, as well as provide bike lanes in both directions along this segment. A new raised median, light poles, signage, stormwater catch basins, retaining walls, and sidewalks would also be provided on both sides of the roadway, where appropriate.

The project area is in a location that is culturally sensitive to the Native American community. The cultural resources study included tribal outreach and coordination to address this cultural sensitivity.

Oceanside Water Utilities Dept On-Call Environmental Consulting Services, 2017-2022 (2018 - 2020). Cultural Resources Task Lead/Principal Investigator for three consecutive on-call contracts with the City of Oceanside Water Utilities Department. Oversees the preparation of cultural resource reports, coordinates with Native American tribes, and directs construction monitoring teams for projects as part of this contract. Project types include reservoirs, pump stations, lift stations, pipelines, and treatment plants.

Park Circle - Cultural Resources (2014 - 2019). Project Manager/Principal Investigator of a cultural resources survey and testing program for a proposed 65-acre residential development in the Valley Center area of San Diego County. The project is located along Moosa Creek, in an area that is culturally sensitive to the Luiseño people. Oversaw background research, historic study, field survey, testing, recording archaeological sites and historic structures, and report preparation. Responsible for Native American outreach and coordination. The cultural resources study included survey of the project area, testing of several archaeological sites, and outreach and coordination with the Native American community, as well as a historic study that addressed a mid-20th century dairy barn and a late 19th century vernacular farmhouse. Work performed for Touchstone Communities.

Peacock Hill Cultural Resources (2014 - 2017). Project Manager/Principal Investigator of a cultural resources study update for a residential development in Lakeside. Oversaw updated research, fieldwork, lab work, analysis by forensic anthropologists, report preparation, and Native American coordination. In the course of outreach and coordination with the Native American (Kumeyaay) community, possible human remains were identified, prompting additional fieldwork, as well as coordination with the Native American community and forensic anthropologists. Work performed for Peacock Hill, Inc.

Sky Canyon Sewer Environmental Consulting (2018 - 2019). Cultural Resources Task Lead for this project adjacent to the City of Murrieta in southwestern Riverside County. Eastern Municipal Water District (District) proposed to implement the Sky Canyon Sewer Main Extension Project to construct approximately 6,700 linear feet of new gravity-fed 36-inch-diameter sewer main to provide additional sewer capacity for planned development. The proposed 36-inch-diameter sewer main would extend the existing 36-inch-diameter French Valley Sewer at Winchester Road further downstream to Murrieta Hot Springs Road. Oversaw background research and field survey. Responsible for Native American outreach for cultural resources survey and co-authored technical report. Assisted District with Native American outreach and consultation under AB 52. Work performed under an as-needed contract for Eastern Municipal Water District.

Stacie Wilson,RPA

Senior Archaeologist

HELIX Environmental Planning

Summary of Qualifications

Ms. Wilson has been professionally involved in cultural resources management for 18 years and has extensive experience in both archaeology and Geographic Information Systems (GIS). She has served as principal investigator on numerous cultural resources management projects, and regularly coordinates with local, state, and federal agencies and Native American tribal representatives. She is skilled in project management, archaeological inventories and excavation, and report documentation and has broad experience on private, municipal, federal, utility, and renewable energy projects. Her years of experience also encompass an understanding of California Environmental Quality Act (CEQA) and National Environmental Policy Act (NEPA) compliance regulations. She is proficient at creating, organizing, and analyzing GIS data, and serving as a spatial and geostatistical analyst. Ms. Wilson is a Registered Professional Archaeologist (RPA) and meets the U.S. Secretary of the Interior's Professional Qualifications for prehistoric and historic archaeology.

Selected Project Experience

Borba 1 Industrial Project NEPA Support (2017 - 2018). Principal Investigator for a cultural resources study to support the development of an industrial property in San Bernardino County that included federal permitting. Oversaw preparation of a records search, archival research, preparation of historic context data, consultation with the Native American Heritage Commission (NAHC), and an archaeological survey of the property. Coordinated with the Gabrieleno Band of Mission Indians – Kizh Nation to provide a Native American monitor during survey. A marine shell scatter and two historic built environment resources, a historic residence and the historic Tedama Cattle Farm, were identified during the study. The Cucamonga Creek Channel, a U.S. Army Corps of Engineers (USACE) public works facility, and the Merrill Avenue Bridge, were also identified within the project site; research was performed to determine the age of channelization. Prepared a technical report to comply with Section 106 of the National Historic Preservation Act (NHPA), as amended, in support of Section 404 Nationwide Permit and Section 408 permission. Work performed for WestLAND Group, Inc., with USACE as the lead agency.

Moulton Niguel Water District Pipeline Alignment at I-5 and Oso Creek (2017 - 2018). Principal Investigator for the replacement of existing potable water (PW) and recycled water (RW) pipelines by Moulton Niguel Water District (MNWD). Supervised the completion of background research and constraints analysis, Native American coordination, cultural resources survey, coordination with MNWD, and report preparation. Work performed as a subconsultant to GHD, with MNWD as the lead agency.

Education

Master of Science, Applied Geographical Information Science, Northern Arizona University, 2008

Bachelor of Arts, Anthropology, University of California, San Diego, 2001

Bachelor of Science, Biological Psychology, University of California, San Diego, 2001

Registrations/ Certifications

Register of Professional Archaeologists, The Register of Professional Archaeologists #16436, 2008

County of Riverside, Approved Cultural Resources Consultant, 2017

County of San Diego, Approved CEQA Consultant for Archaeological Resources, 2019

Padre Dam Municipal Water District East County Advanced Water Purification Program (2018 - 2020). Senior Archaeologist for cultural resources inventory and assessment of approximately 10 miles of pipeline. The East County Advanced Water Purification project proposes to increase the region's supply of potable water. Duties included preparation of a cultural resources study, assisting with community outreach with regard to the historic resources, and working with the agencies and interested parties to develop appropriate measures to avoid or minimize impacts. Work performed for Kennedy/Jenks Consultants, Inc., with Padre Dam Municipal Water District as the lead agency and Helix Water District, the County of San Diego, and the City of El Cajon as participating agencies.

La Salina Sewer Lift Station Design and Wastewater Treatment Plant Decommissioning (2018 - 2019). Principal Investigator for constructing new (and upgraded) wastewater conveyance facilities (including the Buccaneer Lift Station and Force Main), upgrading existing stormwater treatment facilities, and demolition and decommissioning the existing La Salina WWTP in the City of Oceanside in northern San Diego County. The project also includes constructing an approximately three-mile Buccaneer Force Main along Oceanside Boulevard. Responsibilities included the coordination and oversight of the cultural resources study, which included a records search, Sacred Lands File search, a review of historic aerial photographs and maps, and a field survey for both archaeological and built environment resources. Work performed for the City of Oceanside.

CEQA/NEPA Support for Ontario International Airport (2018 - 2019). Cultural Resources Specialist for CEQA compliance for the construction and operation of an air cargo facility in the northwest quadrant of Ontario International Airport. Responsible for coordination of a records search and Sacred Land File search from the Native American Heritage Commission and providing a cultural analysis on proposed project. Work performed for Ontario International Airport Authority.

San Elijo Joint Powers Authority Roadway and Trail Addendum and Permitting (2018 - 2019). Principal Investigator for a cultural resources study for the San Elijo Water Reclamation Facility Upgrades Project, located adjacent to San Elijo lagoon in western San Diego County. The study was conducted in support of the development of a lighted shared-use trail within the San Elijo Water Reclamation Facility (SEWRF) property and entrance improvements along the SEWRF frontage. Responsibilities included the coordination and oversight of a records search, Sacred Lands File search, Native American outreach, a review of historic aerial photographs and maps, a pedestrian survey, archaeological testing, and technical reports. The study was conducted for compliance with the California Environmental Quality Act (CEQA) and Section 106 of the National Historic Preservation Act (NHPA) in support of a Nationwide Permit authorization from the U.S. Army Corps of Engineers (USACE). Work performed as a subconsultant to Kimley-Horn & Associates, with the San Elijo Joint Powers Authority as CEQA lead agency.

Theodore G. Cooley, RPA

Senior Archaeologist

Summary of Qualifications

Mr. Cooley has over 45 years of experience in archaeological resource management. He has directed test and data recovery investigations, monitoring programs, and archaeological site surveys of large and small tracts, and has prepared reports for various cultural resource management projects. He is well-versed in National Historic Preservation Act, National Environmental Policy Act (NEPA), and California Environmental Quality Act (CEQA) regulations and processes. Mr. Cooley's experience also includes Native American consultation for monitoring of archaeological field projects, including some with human remains and reburial-related compliance issues.

Selected Project Experience

8016 Broadway Self Storage Project (2019 - Present). Senior Archaeologist for a Phase I pedestrian survey and cultural resource inventory program of the Lemon Grove Self-Storage project located in the City of Lemon Grove, San Diego County. Involvement included participation in the analysis of the results from the survey program and co-authorship of the technical report. Work performed for the Summit Environmental Group, Inc.

Briggs Road Walton Development Project (Assessor's Parcel Number 461-170-001) (2019 - Present). Senior Archaeologist for a Phase I pedestrian survey and cultural resource inventory program of the Briggs Road Residential project located in Riverside County. Involvement included participation in the analysis of the results from the survey program and co-authorship of the technical report. Work performed for the Walton International Group, LLC.

Brown Field and Montgomery Field Airport Master Plans (2019 - Present). Senior Archaeologist for Phase I cultural resource inventory and pedestrian survey programs at the Brown Field Municipal Airport and the Montgomery-Gibbs Executive Airport, in the City of San Diego, in support of updating of the Airport Master Plan and its Programmatic Environmental Impact Report. Involvement included participation in the analysis of the results from the survey programs and co-authorship of the technical reports. Work performed as a subconsultant to C&S Companies, with the City of San Diego as the lead agency.

Cubic Redevelopment Environmental Consulting (2019 - Present). Senior Archaeologist for a Phase I pedestrian survey and cultural resource inventory and assessment program in support of a 20-acre redevelopment project, located in the community of Kearny Mesa, City of San Diego. Involvement included participation in the analysis of the results from the survey program and preparation of the technical report. Work performed for Cubic Redevelopment Environmental Consulting, with the City of San Diego as lead agency.

Education

County or Riverside, Certified Cultural Resources Consultant Principal Investigator

County of Orange, Certified Cultural Resources Consultant Principal Investigator

County of San Diego, Approved Consultant for Archaeological Resources

Los Angeles, Ventura, San Luis Obispo, and Santa Barbara Approved Consultant

Theodore G. Cooley, RPA

Senior Archaeologist

French Valley 303 Project (2019 - Present). Senior Archaeologist for an archaeological construction monitoring program for the French Valley 303 Site residential development project, located in the French Valley area of unincorporated Riverside County. Involvement included participation in the analysis of the results from the monitoring program and co-authorship of the technical report. Work performed for Pulte Home Co., LLC.

Hiser Property Project (2019 - Present). Senior Archaeologist for a due diligence study prepared to summarize potential cultural resources constraints to the 9.2-acre Hiser Property development project, located in the Mission Gorge area of the City of Santee, San Diego County. The study consisted of background research including a record search and limited archival study, a field survey, and a review of the Sacred Lands File from the Native American Heritage Commission (NAHC). Involvement included participation in the analysis of the results and preparation of a summary letter report of the potential cultural resources-related constraints to the planned development. Work performed for KB Home.

Ponto Hotel Technical Studies (2019 - Present). Senior Archaeologist for a cultural resources assessment study for the Ponto Hotel development project in the City of Carlsbad, San Diego County, California. Involvement included participation in the analysis of the results from the assessment program and preparation of the technical report. Work performed for Kam Sang Company, with the City of Carlsbad as the lead agency.

R.M. Levy Water Treatment Plant Sewer Replacement (2019 - Present). Senior Archaeologist for a Phase I pedestrian survey and cultural resource inventory and assessment program in support of a water treatment plant, sewer pipeline, replacement project, located in the community of Lakeside, San Diego County. Involvement included participation in the analysis of the results from the survey program and preparation of the technical report. Work performed for HELIX Water District.

Salt Bay District Specific Plan EIR (2019 - Present). Senior Archaeologist for a Phase I pedestrian survey and cultural resource inventory program in support of the 46.6-acre Salt Bay Design District Specific Plan mixed-use wholesale/retail shopping and light industrial development project, in the cities of San Diego and Chula Vista. Involvement included participation in the analysis of the results from the survey program and co-authorship of the technical report. Work performed for M. & A. Gabaee, with the City of San Diego as lead agency.

San Jacinto Property Project (2019 - Present). Senior Archaeologist for a Phase I pedestrian survey and cultural resource inventory program of the 214 residential project located in Riverside County. Involvement included participation in the analysis

of the results from the survey program and co-authorship of the technical report. Work performed for the Walton International Group, LLC.

San Elijo Joint Powers Authority Roadway and Trail Addendum and Permitting (2019 - Present). Senior Archaeologist for Phase I cultural resource inventory, pedestrian survey, and resource testing at the San Elijo Water Reclamation Facility adjacent to San Elijo lagoon, in San Diego County, in support of the preparation by the San Elijo Joint Powers Authority of a Roadway and Trail Addendum for upgrades to the facility requiring verification of Nationwide Permit authorization from the U.S. Army Corps of Engineers (USACE). Involvement included participation in the analysis of the results from the survey and testing program and co-authorship of the technical report. Work performed as a subconsultant to Kimley-Horn & Associates, with the San Elijo Joint Powers Authority as lead agency.

Sycamore & Watson Project (2019 - Present). Senior Archaeologist for an archaeological construction monitoring program for the Sycamore & Watson residential development project, located in City of Vista, San Diego County. Involvement included participation in the analysis of the results from the monitoring program and preparation of the technical report. Work performed for Meritage Homes.

Sycamore Canyon/Goodan Ranch Public Access Plan IS/MND (2019 - 2019). Senior Archaeologist for Phase I pedestrian survey and cultural resource inventory in support of the preparation by the County of San Diego County Parks Department of a Public Access Plan for the Sycamore Canyon/Goodan Ranch Preserve located in coastal foothills of unincorporated west-central San Diego County. Involvement included participation in the analysis of the results from the survey program and co-authorship of the technical report. Work performed for the County of San Diego.

Sycuan/Sloane Canyon Trail IS/MND (2019). Senior Archaeologist for Phase I pedestrian survey and cultural resource inventory in support of the preparation by the County of San Diego County Department of a Parks and Recreation for the Sycuan/Sloane Canyon Trail project located in the coastal foothills of unincorporated southwestern San Diego County. Involvement included participation in the analysis of the results from the survey program and co-authorship of the technical report. Work performed for the County of San Diego.

The Enclave at Delpy's Corner Project (2019 - Present). Senior Archaeologist for a cultural resources monitoring and data recovery program in support of a proposed 124-unit townhome development project, in the City of Vista, San Diego County. Involvement included participation in the analysis of the prehistoric lithic artifacts and preparation of technical report sections containing the results of these analyses. Work performed for CalAtlantic Homes.

Kassie Sugimoto, M.A.

Cultural Resources Project Manager I

Summary of Qualifications

Ms. Sugimoto has 10 years of professional experience in archaeology. She has worked in Southern California archaeology for 6 years, including work in historic archaeology, prehistoric archaeology, human osteology, and close coordination with Native American tribes. She has directed test and data recovery investigations, monitoring programs, and archaeological site surveys, and has prepared reports for various cultural resource management projects. She is well-versed in National Historic Preservation Act, National Environmental Policy Act (NEPA), and California Environmental Quality Act (CEQA) regulations and processes.

Selected Project Experience

Darco Project (TTM 31589) (2021). Archaeologist for cultural services provided in support of the Darco Residential Development Project, located in the City of Moreno Valley (City), Riverside County, California. HELIX was contracted by D.R. Horton to provide a Phase I archaeological study to meet the requirements of the City. The study included a records search from the Eastern Information Center; a Sacred Lands File search through the NAHC; tribal outreach with the local Native American community, as identified by the NAHC; review historic maps and aerial photographs of the project area; a field survey of approximately 36 acres; and preparation of a cultural resources survey report detailing the methods and results of the study, as well as recommendations.

Morningstar Village (2021). Archaeologist for cultural services provided in support of the Morningstar Village Project located in the community of French Valley, unincorporated Riverside County, California. HELIX was contracted by Morningstar Village LLC to provide a cultural resource study in support of a 404 Pre-Construction Notification application for a Nationwide Permits; the report addressed both CEQA and Section 106 of the National Historic Preservation Act to support agency permitting. The study included a records search from the Eastern Information Center; a Sacred Lands File search through the NAHC; tribal outreach with the local Native American community, as identified by the NAHC; review historic maps and aerial photographs of the project area; a field survey of the United States Army Corp of Engineers (USACE) permit area; and preparation of a cultural resources report detailing the methods and results of the study, as well as recommendations. An additional letter report was prepared for the USACE to summarize the cultural resources within the USACE permitting area, and additional tribal outreach was conducted at the request of USACE.

Education

Master of Arts, Anthropology, North Carolina State University, Raleigh, 2015

Bachelor of Arts, Archaeology, California State University Dominguez Hills, 2013

Professional Affiliations

Member, Project Management Institute (PMI), 2019-Present

Member, Society for American Archaeology, 2013-Present

Kassie Sugimoto, M.A.

Cultural Resources Project Manager I

Oak Valley Town Center (2021). Archaeologist for cultural services provided in support of the Oak Valley Town Center Project located in the City of Calimesa (City), Riverside County (County), California. HELIX was contracted by Oak Valley Development Company to provide a Phase 1 cultural resources study to the standards of the City of Calimesa; the report will address both CEQA and Section 106 of the National Historic Preservation Act, to support agency permitting. The study included a records search from the Eastern Information Center; a Sacred Lands File search through the NAHC; tribal outreach with the local Native American community, as identified by the NAHC; review historic maps and aerial photographs of the project area; conduct a field survey of approximately 244 acres; and prepare a cultural resources report detailing the methods and results of the study, as well as recommendations.

Sandalwood Commercial Development Project (2021). Archaeologist for cultural services provided in support of the Sandalwood Commercial Development Project, located in the City of Calimesa (City), Riverside County, California. HELIX was contracted by J&T Investments to provide a Phase I archaeological study to meet the requirements of the City. The study included a records search from the Eastern Information Center; a Sacred Lands File search through the NAHC; tribal outreach with the local Native American community, as identified by the NAHC; review historic maps and aerial photographs of the project area; conduct a field survey of approximately 10 acres; and prepare a cultural resources survey report detailing the methods and results of the study, as well as recommendations.

Sky Canyon Sewer Main Extension (2021). Archaeologist for cultural services provided in support of the Sky Canyon Sewer Main Extension Project located in the city of Murrieta, Riverside County, California. A Cultural Resources Monitoring Plan (CRMP) was developed in consultation with the consulting Tribe for the construction of approximately 6,700 linear feet of new gravity-fed 36 inch diameter sewer main proposed by the lead agency, the Eastern Municipal Water District. HELIX provided cultural services, including Native American Outreach and Coordination, development of a CRMP, Cultural Resources Monitoring, and a letter report upon completion of the archaeological monitoring program.

McCanna Hills Addendum to an Environmental Impact Report, Riverside County, California. Archaeologist for preparation of an addendum to EIR319 previously prepared for the McCanna Ranch Specific Plan near Lake Perris in western Riverside County.

Archaeological Studies for a Riverside County Parcel (APN 436-360-009), Riverside County, California. Project Manager and Project Archaeologist for execution and management of the project contract with the client, conducted field and archival research, prepared technical documents for the City of San Jacinto. Work performed for Panorama Properties, Inc.

Lincoln Van Buren Project, Riverside, California. Archaeologist for Phase I studies for the development of a gas station. Field archaeologist for archaeological survey. Work performed for Psomas.

University of California Riverside (UCR), Riverside, California. Archaeologist for Phase I studies for as needed contract. Field archaeologist for archaeological and historic surveys. Work performed for Psomas.

Cultural Resources Studies for the City of San Jacinto, San Jacinto, California. Project Manager and Project Archaeologist. Executed and managed the project's contract with the client, conducted field and archival research, prepared technical documents for the City for Assessor Parcel Numbers 439-112-032, 033, 034, 036, 003, 004, 007, 008, and 009. Work performed for Mark Development.

Trevor Gittelhough, RPA

Cultural Resources Assistant Project Manager

Summary of Qualifications

Trevor H. Gittelhough is an archaeological assistant project manager, specializing in underwater cultural resources, with over a decade of experience in archaeology, including both cultural resources management and academic projects. This experience includes site monitoring; surveys and excavations; laboratory sorting, cataloging, and analysis; and conservation. He has conducted environmental, paleontological, and cultural resources work throughout California, Nevada, Oregon, and Florida in support of compliance with California Environmental Quality Act (CEQA), National Environmental Policy Act (NEPA) and Sections 106 and 110 of the National Historic Preservation Act (NHPA) for public and private sector clients including a range of local, state, and federal agencies such as Southern California Edison, the United States Navy and Air Force, Caltrans, and FEMA.

He has experience in team management in the terrestrial and underwater archaeological management sectors, with expertise in implementation of mitigation and monitoring projects, report production, and coordination with Indigenous groups. Underwater and Indigenous archaeology are Mr. Gittelhough's specialties, which are enhanced by his skill and experience in sailing, diving, and prehistoric technology construction. His research interests include maritime technologies and practices, settlement patterns, trade and exchange, colonial interactions, prehistoric technologies, and anthropological/ archaeological theory. In addition, he has expertise in illustration of artifacts, stratigraphic and excavation unit profiles, site maps, GIS, remote sensing, and underwater excavation and mapping techniques.

Mr. Gittelhough's technical skills include terrestrial and submerged archaeological survey, excavation, and site testing. He has authored numerous site records and technical reports detailing the results of cultural resources work, as well as academic articles. He has also had thorough training in artifact analysis and specializes in lithic analysis and maritime conservation. His academic background includes advanced training in conservation and underwater archaeology. He has extensive training at the graduate level and earned his M.A. from East Carolina University. Mr. Gittelhough is Registered Professional Archaeologist, a member of the Society for American Archaeology (SAA), a member of the Society for Historical Archaeology (SHA), and a member of the Society for California Archaeology (SCA).

Selected Project Experience

Bouquet Canyon Road Project, Los Angeles County, CA (2021). Cultural Resource Specialist serving as lead archaeological monitor and technical report writer for this project in the City of Santa Clarita. This work included monitoring all ground-disturbing

activities associated with geotechnical studies, such as drilling and trenching. Monitoring was also undertaken during ground penetrating radar studies of portions of the project area.

California Crossings, Attisha Trust Parcel, San Diego County, CA (2021). Cultural Resource Specialist for a cultural resources study in support of biological mitigation measures (burrowing owl habitat creation) for the proposed Project in the County of San Diego. Prepared an archaeological resources assessment in compliance with state and federal regulations. Scope included a cultural resources records search, review of historic maps and aerials, and preparation of a technical report.

Enchanted Hills Park Project, Perris, Riverside County, CA (2021). Cultural Resource Specialist for a monitoring program during initial sitework for this project in the City of Perris, in Riverside County. Prepared monitoring letter report.

Mission Basin Groundwater Purification Facility Well Expansion and Brine Minimization Project, Oceanside, San Diego County, CA (2021). Cultural Resource Specialist for a cultural resources study in support of the proposed Project in the City of Oceanside, in northern San Diego County. Prepared a monitoring results memo for monitoring of geotechnical investigations and assisted with preparation of the cultural resources technical report in compliance with state and federal regulations. Scope included a cultural resources records search, preparation of a letter report/memo, and assistance with the technical report.

Oak Shores/Lake Morena Views MWC Consolidation Project, San Diego County, CA (2021). Cultural Resource Specialist for a cultural resources study in support of the proposed Project in eastern San Diego County. Assisted with preparation of a cultural resources technical report in compliance with state and federal regulations, as well as State Water Resources Control Board. Scope included a cultural resources records search, review of historic maps and aerials, and assistance with preparation of a technical report.

Archaeological Monitoring for the P-586 Missile Assembly Building - San Nicolas Island, Ventura County, CA (2021). Cultural Resource Specialist serving as archaeological monitor and technical report writer. This work included monitoring all ground-disturbing activities, including grubbing, grading, and trenching. Monitoring included close involvement with United States Navy personal and Tribal Members and Observers.

Shady View Residential Project Environmental Impact Report, Chino Hills, San Bernardino County, CA (2021). Cultural Resource Specialist for a cultural resources study in support of the proposed Project in the City of Chino Hills in San Bernardino County. Assisted in the preparation of the technical report in compliance with state and federal regulations. Project scope included a cultural resources records search, review of historic maps and aerials, field survey, and preparation of a technical report.

Trevor Gittelhough, RPA

Cultural Resources Assistant Project Manager

Previous Project Experience

Los Angeles County Natural History Museum Center for History and Cultural Project, Los Angeles County, CA. Assistant Project Manager for a cultural resources study in support of the proposed Project in the downtown area of the City Los Angeles. Prepared an archaeological and tribal cultural resources assessment in compliance with CEQA, specifically Assembly Bill 52. Scope included a cultural resources records search, review of historic maps and aerials, and preparation of a technical study for submittal to the Department of City Planning.

Environmental Services Support for the Villages at The Alhambra Project, Los Angeles County, CA. Assistant Project Manager for a cultural resources study in support of the proposed Project in the downtown area of the City Los Angeles. Prepared an archaeological and tribal cultural resources assessment in compliance with CEQA, specifically Assembly Bill 52. Scope included a cultural resources records search, review of historic maps and aerials, and preparation of a technical study for submittal to the Department of City Planning.

Tierra Crossing Tribal Cultural Resource and Archaeological Assessment, Los Angeles, CA. Assistant Project Manager for a cultural resources study in support of the proposed Project in the downtown area of the City Los Angeles. Prepared an archaeological and tribal cultural resources assessment in compliance with CEQA, specifically Assembly Bill 52. Scope included a cultural resources records search, review of historic maps and aerials, and preparation of a technical study for submittal to the Department of City Planning.

Tribal Cultural Resources Assessment for the 17346 Sunset Project, Los Angeles, CA. Assistant Project Manager for a cultural resources study in support of the proposed Project in the downtown area of the City Los Angeles. Prepared a tribal cultural resources assessment in compliance with CEQA, specifically Assembly Bill 52. Scope included a cultural resources records search, review of historic maps and aerials, and preparation of a technical study for submittal to the Department of City Planning.

James Turner, RPA

Staff Archaeologist

Summary of Qualifications

Mr. Turner is a Registered Professional Archaeologist (RPA) with a Master's degree in Anthropology and field and college-level teaching experience in archaeology. He is experienced in Section 106, the Native American Graves Protection and Repatriation Act (NAGPRA), and writing detailed reports. Mr. Turner has archaeological research and fieldwork expertise throughout southern California. He has also received training in identifying and analyzing animal remains in archaeological contexts, historic artifact identification, and technical writing. Mr. Turner's experience meets the Secretary of the Interior's Professional Qualification Standards for archaeology.

Selected Project Experience

eTS 43472 "Gold Mine" Monitoring (2020). Archaeologist for an erosion control and repair project in the community of Julian. Conducted cultural resource monitoring and report preparation. Work performed for San Diego Gas & Electric.

Aliso Creek Canyon Restoration Project (2020). Archaeologist for an erosion repair project in Lake Forest. Conducted a field survey of the project area, performed background research, and produced a cultural resources report. Work performed for the Orange County Department of Public Works.

Broadway Channel Improvements - Phase A (2020 -). Archaeologist for an earthen channel improvement project in the city of El Cajon. Performed background research and prepared cultural resource survey report. Work performed for City of El Cajon.

Clairemont Community Plan Update EIR Ph1 (2020). Archaeologist for the Clairemont Community Plan Update. Performed background research and assisted with preparing the Community Plan Update cultural resources section. Work performed for the City of San Diego.

Cordial Road Pipeline (2020). Archaeologist for a pipeline replacement project in the unincorporated portion of the City of El Cajon. Performed background research and field survey. Other responsibilities included the production of a letter report detailing the methods and results of the survey, as well as the completion of a site record update to submit to the South Coastal Information Center. Work performed for the Padre Dam Municipal Water District.

Carmel Mountain Road Life Sciences Project (2020). Archaeologist for a proposed commercial development project in the Torrey Hills Community Plan area.

Responsibilities included performing background and archival research and producing an archaeological resources report. Work performed for Allen Matkins Leck Gabme Mallory & Natsis, LLP.

Draft EIS/Overseas EIS - Disposal of Decommissioned, Defueled Ex-Enterprise (CVN 65) & Associated Naval Reactor Plants (2020 -). Archaeologist for the Draft EIS for the disposal of the Navy ex-Enterprise. Responsible for background research and citation management and assisted with document preparation. Work performed for the United States Navy as a subconsultant to ManTech.

Eastlake Village Park (2020). Archaeologist for a telecommunication project in the community of Eastlake in the City of Chula Vista. Conducted cultural resource monitoring for the drilling of a cassion hole. Work performed for Terracon.

General Coatings (2020). Archaeologist for a due diligence project for the possible future expansion of the General Coatings property. Conducted background research, which included analyzing a records search and viewing historic maps and aerial photographs of the project area. Additional responsibilities included performing a field survey of the project area and producing a cultural resources due diligence report. Work performed for General Coatings.

Lake Rancho Viejo Environmental Consulting (2020). Archaeologist for a cultural resources survey for a proposed housing development in the community of Fallbrook in northern San Diego County. Conducted background research and report preparation. Work performed for Q Technology Direct LLC with County of San Diego as the lead agency.

Mtn View Connector Pipeline - Cultural (2020). Archaeologist for a waterline replacement project in the community of Alpine. Conducted cultural resource monitoring and prepared the final monitoring report. Work performed for Padre Dam Municipal Water District.

Salt Bay Design District Specific Plan EIR (2020). Archaeologist for a mixed-use development project, which proposes to include wholesale/retail shopping and light industrial uses. Participated in an archaeological testing program and produced artifact tables for report. Work performed for M & A Gabaee.

Santa Ysabel Trail (2020 -). Staff Archaeologist for a proposed 3 mile hiking trail in the unincorporated community of Julian. Performed background research, participated in the cultural resource survey, and contributed to the cultural resources survey report. Work performed for the County of San Diego Parks and Recreation Department.

SUBJECT: GEOTECHNICAL ENGINEERING INVESTIGATION
W/ GEOLOGIC HAZARD STUDY
PROPOSED FUELING STATION
SANDALWOOD DRIVE & 7TH STREET
CALIMESA, CALIFORNIA

Dear Ms. Grajeda:

At your request and authorization, SALEM Engineering Group, Inc. (SALEM) has prepared this Geotechnical Engineering Investigation report for the Proposed Fueling Station to be located at the subject site.

The accompanying report presents our findings, conclusions, and recommendations regarding the geotechnical aspects of designing and constructing the project as presently proposed. In our opinion, the proposed project is feasible from a geotechnical viewpoint provided our recommendations are incorporated into the design and construction of the project.

We appreciate the opportunity to assist you with this project. Should you have questions regarding this report or need additional information, please contact the undersigned at (909) 980-6455.

Respectfully Submitted,

SALEM ENGINEERING GROUP, INC.

GEOTECHNICAL ENGINEERING INVESTIGATION
W/ GEOLOGIC HAZARD STUDY
PROPOSED FUELING STATION
SANDALWOOD DRIVE & 7TH STREET
CALIMESA, CALIFORNIA

1. PURPOSE AND SCOPE

This report presents the results of our Geotechnical Engineering Investigation with Geologic Hazard Study for the Proposed Fueling Station to be located near the intersection of Sandalwood Drive and 7th Street in Calimesa, California (see Figure 1, Vicinity Map).

The purpose of our geotechnical engineering investigation was to observe and sample the subsurface conditions encountered at the site, and provide conclusions and recommendations relative to the geotechnical aspects of constructing the project as presently proposed. The scope of this investigation did not include a slope stability analysis.

The scope of this investigation included a field exploration, percolation testing, laboratory testing, engineering analysis and the preparation of this report. Our field exploration (drilling) was performed on February 9 and 10, 2021 and included the drilling of ten (10) small-diameter soil borings to a maximum depth of 34½ feet at the site. Additionally, two (2) percolation tests were performed at depths of approximately 7 and 8 feet below existing grade. The locations of the soil borings and percolation tests are depicted on Figure 2, Site Plan. A detailed discussion of our field investigation and exploratory boring logs are presented in Appendix A.

Laboratory tests were performed on selected soil samples obtained during the investigation to evaluate pertinent physical properties for engineering analyses. Appendix B presents the laboratory test results in tabular and graphic format. The recommendations presented herein are based on analysis of the data obtained during the investigation and our experience with similar soil and geologic conditions. If project details vary significantly from those described herein, SALEM should be contacted to determine the necessity for review and possible revision of this report. Earthwork and Pavement Specifications are presented in Appendix C. If text of the report conflict with the specifications in Appendix C, the recommendations in the text of the report have precedence.

2. PROJECT DESCRIPTION

Based on the information provided to us, we understand that the proposed development of the site will include construction of a fueling station with a 3,849 square-foot Convenient Store, a 2,000 square-foot Quick Service Restaurant, a 4-pump vehicle canopy, a 10-pump semi-truck canopy, a CAT scale and underground storage tanks, with associated parking and landscaping. Maximum wall load is expected to be

on the order of 5 kips per linear foot. Maximum column load is expected to be on the order of 100 kips. Floor slab soil bearing pressure is expected to be on the order of 150 psf.

A site grading plan was not available at the time of preparation of this proposal. As the existing is gently sloping with a ditch along the northern boundary and bisecting the northeast portion of the site, we anticipate that cuts and fills during earthwork will be moderate in order to provide a level building pad and positive site drainage. In the event that changes occur in the nature or design of the project, the conclusions and recommendations contained in this report will not be considered valid unless the changes are reviewed and the conclusions of our report are modified. The site configuration and locations of proposed improvements are shown on the Site Plan, Figure 2.

3. SITE LOCATION AND DESCRIPTION

The subject site is located on the east side of 7th Street and approximately 350 north of Sandalwood Drive in Calimesa, California (See Vicinity Map, Figure 1). The Assessor Parcel Number (APN) of the property is 411-210-024 which comprises an area of 9.33 acres. The project site is located within the southern portion of the property and encompasses approximately 3.74 acres.

At the time of our field exploration, the site was vacant land covered with native vegetation. Overhead power lines run along the west boundary of the site. Based on available aerial photographs, the site has been vacant since at least 1996. A ravine existed on the northern boundary of the site until site was graded sometime in 2009 and 2010. The ravine was filled and brought to grade with the exception of northeast corner of the site adjacent to the drainage culvert. The site is gently sloping to the west with elevations ranging from approximately 2,399 to 2,386 feet above mean sea level based on Google Earth imagery. The area adjacent to the drainage culvert contains steeper slopes, with elevations ranging from approximately 2,392 to 2,381 feet above mean sea level based on Google Earth imagery.

4. FIELD EXPLORATION

Our field exploration consisted of site surface reconnaissance and subsurface exploration. The exploratory test borings (B-1 through B-10) were drilled on February 9 and 10, 2021 in the areas shown on the Site Plan, Figure 2. The test borings were advanced with 6½-inch diameter hollow stem augers rotated by a truck-mounted CME 45C drill rig. The test borings were extended to a maximum depth of 34½ feet below existing grade. The depth of drilling was limited due to auger refusal on dense soil conditions.

The materials encountered in the test borings were visually classified in the field, and logs were recorded by a field engineer and stratification lines were approximated on the basis of observations made at the time of drilling. Visual classification of the materials encountered in the test borings were generally made in accordance with the Unified Soil Classification System (ASTM D2488).

A soil classification chart and key to sampling is presented on the Unified Soil Classification Chart, in Appendix "A." The logs of the test borings are presented in Appendix "A." The Boring Logs include the soil type, color, moisture content, dry density, and the applicable Unified Soil Classification System symbol. The location of the test borings were determined by measuring from features shown on the Site Plan, provided to us. Hence, accuracy can be implied only to the degree that this method warrants.

The actual boundaries between different soil types may be gradual and soil conditions may vary. For a more detailed description of the materials encountered, the Boring Logs in Appendix "A" should be consulted. Soil samples were obtained from the test borings at the depths shown on the logs of borings. The MCS samples were recovered and capped at both ends to preserve the samples at their natural moisture content; SPT samples were recovered and placed in a sealed bag to preserve their natural moisture content. The borings were backfilled with soil cuttings after the completion of the exploration.

5. LABORATORY TESTING

Laboratory tests were performed on selected soil samples to evaluate their physical characteristics and engineering properties. The laboratory-testing program was formulated with emphasis on the evaluation of natural moisture, density, shear strength, consolidation potential, expansion index, maximum density and optimum moisture determination, and gradation of the materials encountered.

In addition, chemical tests were performed to evaluate the corrosivity of the soils to buried concrete and metal. Details of the laboratory test program and the results of laboratory test are summarized in Appendix "B." This information, along with the field observations, was used to prepare the final boring logs in Appendix "A."

6. GEOLOGIC SETTING

The site is located within the northwestern portion of the San Gorgonio pass within the northernmost portion of the Peninsular Ranges Geomorphic Province. The San Gorgonio Pass is a tectonic physiographic feature that separates the San Bernardino Mountains of the Transverse Ranges on the north and the San Jacinto Mountains on the south. The San Gorgonio Pass is expressed as a narrow notch that cuts through the mountains into the Colorado Desert to the east. Most of the Calimesa's vicinity is underlain by a thick sequence of terrestrial sediments that rest on the basement comprising igneous-metamorphic rocks. Younger alluvium occurs in active channels of San Timoteo Wash and tributary canyons, where the alluvium has been deposited on sediments of San Timoteo Formation.

Based on review of the Geologic Map of the El Casco 7.5' Quadrangle[1], the site is mapped in an area of Old alluvial-fan deposits of the upper to middle Pleistocene era (Qof_2) and Very old alluvial fan deposits of the middle Pleistocene era ($Qvof_3$). The Qof_2 material is described as "sandy, gravelly, and silty sediment deposited by streams that formed alluvial-fan landforms; subunits distinguished on the basis of soil-profile development, relative position in the local terrace-riser succession, and degree of erosional dissection." The $Qvof_3$ material is described as "sandy and gravelly deposits having subunits distinguished from each other on the basis of soil-profile development and relative position in local terrace-riser succession. The materials encountered during drilling are generally similar to those mapped in the vicinity of the site.

[1] Morton, Douglas M., and Matti, Jonathan C. (2015), Geologic Map of the El Casco 7.5' quadrangle, Riverside County, California, Sheet 1 of 3: U.S. Geological Survey, scale 1:24,000.

7. GEOLOGIC HAZARDS

7.1 Faulting and Seismicity

Based on the proximity of several dominant active faults and seismogenic structures, as well as the historic seismic record, the area of the subject site is considered subject to relatively high seismicity. The seismic hazard most likely to impact the site is ground-shaking due to a large earthquake on one of the major active regional faults. Moderate to large earthquakes have affected the area of the subject site within historic time.

There are no known active fault traces in the project vicinity. The project area is not within an Alquist-Priolo Earthquake Fault (Special Studies) Zone and will not require a special site investigation by an Engineering Geologist. Soils on site are classified as Site Class D in accordance with Chapter 16 of the California Building Code. The proposed structures are determined to be in Seismic Design Category E.

To determine the distance of known active faults within 100 miles of the site, we used the United States Geological Survey (USGS) web-based application *2008 National Seismic Hazard Maps - Fault Parameters*. Site latitude is 33.9945° North; site longitude is -117.0605° West. The ten closest active faults are summarized below in Table 7.1.

TABLE 7.1
REGIONAL FAULT SUMMARY

Fault Name	Distance to Site (miles)	Maximum Earthquake Magnitude, M_w
San Jacinto; SBV+SJV+A+CC+B+SM	5.7	7.9
S. San Andreas; PK+CH+CC+BB+NM+SM+NSB+SSB+BG+CO	6.1	8.2
San Jacinto; A+CC+B+SM	7.7	7.6
San Jacinto; SBV	10.3	7.1
S. San Andreas; PK+CH+CC+BB+NM+SM+NSB	14.2	8.0
S. San Andreas; BG+CO	15.1	7.4
Pinto Mtn	19.9	7.3
Cleghorn	21.5	6.8
North Frontal (West)	25.3	7.2
Cucamonga	25.4	6.7

The faults tabulated above and numerous other faults in the region are sources of potential ground motion. However, earthquakes that might occur on other faults throughout California are also potential generators of significant ground motion and could subject the site to intense ground shaking.

7.2 Surface Fault Rupture

The site is not within a currently established State of California Earthquake Fault Zone for surface fault rupture hazards. No active faults with the potential for surface fault rupture are known to pass directly beneath the site. Therefore, the potential for surface rupture due to faulting occurring beneath the site during the design life of the proposed development is considered low.

7.3 Ground Shaking

Seismic coefficients and spectral response acceleration values were developed based on the 2019 California Building Code (CBC). The CBC methodology for determining design ground motion values is based on the Office of Statewide Health Planning and Development (OSHPD) Seismic Design Maps, which incorporate both probabilistic and deterministic seismic ground motion.

Based on the 2019 CBC, a Site Class D represents the on-site soil conditions with standard penetration resistance, N-values, averaging greater than 15 blow per foot but less than 50 blows per foot in the upper 100 feet below site grade. A table providing the recommended design acceleration parameters for the project site, based on a Site Class D designation, is included in Section 9.2.1 of this report.

Based on the Office of Statewide Health Planning and Development (OSHPD) Seismic Design Maps, the estimated design peak ground acceleration adjusted for site class effects (PGA_M) was determined to be 1.075g (based on both probabilistic and deterministic seismic ground motion).

7.4 Liquefaction

Soil liquefaction is a state of soil particles suspension caused by a complete loss of strength when the effective stress drops to zero. Liquefaction normally occurs under saturated conditions in soils such as sand in which the strength is purely frictional. Primary factors that trigger liquefaction are: moderate to strong ground shaking (seismic source), relatively clean, loose granular soils (primarily poorly graded sands and silty sands), and saturated soil conditions (shallow groundwater). Due to the increasing overburden pressure with depth, liquefaction of granular soils is generally limited to the upper 50 feet of a soil profile. However, liquefaction has occurred in soils other than clean sand.

The soils encountered within the depth of our exploration on the project site consisted predominately of loose to dense silty sand with various amounts of clay, clayey sand, and poorly graded sand with silt; and very stiff to hard sandy silt with various amounts of clay, clayey silt with various amounts of sand, silty clay with various amounts of sand, and sandy clay. Low to very low cohesion strength is associated with the sandy soil. A seismic hazard, which could cause damage to the proposed development during seismic shaking, is the post-liquefaction settlement of the liquefied sands. Groundwater was not encountered during this investigation.

The Riverside County Office of Information Technology GIS website: https://gis.countyofriverside.us/Html5Viewer/?viewer=MMC_Public, shows the subject site to be in a low liquefaction potential area (Figure 5, Liquefaction Potential Zone Map). The site was evaluated for the liquefaction potential. The liquefaction potential of the site is considered to be low.

7.5 Lateral Spreading

Lateral spreading is a phenomenon in which soils move laterally during seismic shaking and is often associated with liquefaction. The amount of movement depends on the soil strength, duration and intensity of seismic shaking, topography, and free face geometry. Due to low liquefaction potential at the site, we judge the likelihood of lateral spreading to be low.

7.6 Flood and Dam Inundation

The Riverside County Office of Information Technology GIS website shows the subject site is not located in a potential flood zone (see Figure 6, Flood Zone Map).

7.7 Subsidence/Fissure Potential Zones

The Riverside County Office of Information Technology GIS website shows the subject site is within a susceptible subsidence potential area (see Figure 7, Subsidence Zone Map). SALEM is not aware of subsidence issues in the immediate project site vicinity.

7.8 Collapsible/Expansive or Hydroconsolidatable Soils

Test data in this geotechnical report show that soil sample consolidated approximately 5 and 8¼ percent after a maximum 16.0 ksf load, respectively. Hydroconsolidation (collapse upon wetting) at a load of 2.0 ksf was approximately ¼ percent. Therefore, the on-site soils have minimal collapse potential.

Soil samples collected from surface to the proposed foundation depths are considered to have a low expansion potential and the sample tested returned and Expansion Index value of 29. The proposed site preparation methods recommended on our geotechnical report should address these geotechnical issues and no additional mitigation measures are required.

7.9 Landslides

There are no known landslides at the site, nor is the site in the path of any known or potential landslides. We do not consider the potential for a landslide to be a hazard to this project.

7.10 Wind and Water Erosion

Based on SALEM's soil boring logs for the subject site, surface soils consist predominantly of loose to dense silty sand with various amounts of clay, clayey sand, and poorly graded sand with silt; and very stiff to hard sandy silt with various amounts of clay, clayey silt with various amounts of sand, silty clay with various amounts of sand, and sandy clay. Soils of this composition and consistency have been shown to possess good resistance to wind and water erosion. The site slightly sloping to the west, and therefore water erosion is minimal. The site will be mostly covered by buildings, pavement or landscaping after development, minimizing long-term wind erosion potential.

7.11 Tsunamis and Seiches

The site is not located within a coastal area. Therefore, tsunamis (seismic sea waves) are not considered a significant hazard at the site. Seiches are large waves generated in enclosed bodies of water in response to

ground shaking. No major water-retaining structures are located immediately up gradient from the project site. Flooding from a seismically-induced seiche is considered unlikely.

8. SOIL AND GROUNDWATER CONDITIONS

8.1 Subsurface Conditions

The subsurface conditions encountered appear typical of those found in the geologic region of the site. In general, the soils generally consisted of loose to dense silty sand with various amounts of clay, clayey sand, and poorly graded sand with silt; and very stiff to hard sandy silt with various amounts of clay, clayey silt with various amounts of sand, silty clay with various amounts of sand, and sandy clay.

No significant fill soils were encountered in our test borings during this investigation. However, fill material are anticipated to be present on-site since the site was previously graded. The northern boundary of the site was a ravine prior to grading in 2009 and 2010. The bottom of the ravine could be 15 to 20 feet deeper than the current site grade. Fill material within the previous ravine area is anticipated to be at least 15 to 20 feet thick. Undocumented fill materials are not suitable to support any future structures and should be replaced with Engineered Fill. Verification of the extent of fill should be determined during site grading. The extent and consistency of the fills should be verified during site construction. Prior to fill placement, SALEM Engineering Group, Inc. should inspect the bottom of the excavation to verify the fill condition.

The soils were classified in the field during the drilling and sampling operations. The stratification lines were approximated by the field engineer on the basis of observations made at the time of drilling. The actual boundaries between different soil types may be gradual and soil conditions may vary. For a more detailed description of the materials encountered, the Boring Logs in Appendix "A" should be consulted.

The Boring Logs include the soil type, color, moisture content, dry density, and the applicable Unified Soil Classification System symbol. The locations of the test borings were determined by measuring from feature shown on the Site Plan, provided to us. Hence, accuracy can be implied only to the degree that this method warrants.

8.2 Groundwater

The test boring locations were checked for the presence of groundwater during and after the drilling operations. Free groundwater was not encountered during this investigation. It should be recognized that water table elevations may fluctuate with time, being dependent upon seasonal precipitation, irrigation, land use, localized pumping, and climatic conditions as well as other factors. Therefore, water level observations at the time of the field investigation may vary from those encountered during the construction phase of the project. The evaluation of such factors is beyond the scope of this report.

8.3 Soil Corrosion Screening

Excessive sulfate in either the soil or native water may result in an adverse reaction between the cement in concrete and the soil. The 2014 Edition of ACI 318 (ACI 318) has established criteria for evaluation of sulfate and chloride levels and how they relate to cement reactivity with soil and/or water.

A soil sample was obtained from the project site and was tested for the evaluation of the potential for concrete deterioration or steel corrosion due to attack by soil-borne soluble salts and soluble chloride. The water-soluble sulfate concentration in the saturation extract from the soil sample was detected to be 257 mg/kg. ACI 318 Tables 19.3.1.1 and 19.3.2.1 outline exposure categories, classes, and concrete requirements by exposure class. ACI 318 requirements for site concrete based upon soluble sulfate are summarized in Table 8.3 below.

TABLE 8.3
WATER SOLUBLE SULFATE EXPOSURE REQUIREMENTS

Water Soluble Sulfate (SO_4) in Soil, % by Weight	Exposure Severity	Exposure Class	Maximum w/cm Ratio	Min. Concrete Compressive Strength	Cementations Materials Type
0.0257	Not Severe	S0	N/A	2,500 psi	No Restriction

The water-soluble chloride concentration detected in saturation extract from the soil samples was 44 mg/kg. This level of chloride concentration is considered to be mildly corrosive. It is recommended that a qualified corrosion engineer be consulted regarding protection of buried steel or ductile iron piping and conduit or, at a minimum, applicable manufacturer's recommendations for corrosion protection of buried metal pipe be closely followed.

8.4 Percolation Testing

Two (2) percolation tests (P-1 and P-2) were performed within assumed infiltration areas and were conducted in accordance with the guidelines established by the County of Riverside. The approximate locations of the percolation tests are shown on the attached Site Plan, Figure 2. The boreholes were advanced to the depths shown on the percolation test worksheets. The holes were pre-saturated before percolation testing commenced. Percolation rates were measured by filling the test holes with clean water and measuring the water drops at a certain time interval. The percolation rate data are presented in tabular format at the end of this Report. The difference in the percolation rates are reflected by the varied type of soil materials at the bottom of the test holes. The test results are shown on the table below.

Test No.	Depth (Feet)	Measured Percolation Rate (min/inch)	Infiltration Rate* (inch/hour)	Soil Type**
P-1	8	9.3	**0.91**	Silty SAND (SM)
P-2	7	250.0	**0.01**	Clayey SAND (SC)

*** Tested infiltration Rate = (ΔH 60 r) / (Δt(r + 2H_{avg})), no factor of safety applied**
**** At bottom of drilled holes**

The soil infiltration rate is based on test conducted with clear water. The infiltration rate may vary with time as a result of soil clogging from water impurities. The infiltration rate will deteriorate over time due to the soil conditions and an appropriate factor of safety (FS) shall be applied. SALEM recommends a minimum factor of safety of 3 be used in design. The soils may also become less permeable to

impermeable if the soil is compacted. Thus, periodic maintenance consisting of clearing the bottom of the drainage system of clogged soils should be expected.

The infiltration rate may become slower if the surrounding soil is wet or saturated due to prolonged rainfalls. Additional infiltration tests should be conducted at bottom of the drainage system during construction to verify the infiltration rate. Groundwater, if closer to the bottom of the drainage system, will also reduce the infiltration rate.

The scope of our services did not include a groundwater study and was limited to the performance of infiltration testing and soil profile description, and the submitted data only. Our services did not include those associated with septic system design. Neither did services include an Environmental Site Assessment for the presence or absence of hazardous and/or toxic materials in the soil, groundwater, or atmosphere; or the presence of wetlands. Any statements, or absence of statements, in this report or on any boring logs regarding odors, unusual or suspicious items, or conditions observed, are strictly for descriptive purposes and are not intended to convey engineering judgment regarding potential hazardous and/or toxic assessment. The geotechnical engineering information presented herein is based upon professional interpretation utilizing standard engineering practices. The work conducted through the course of this investigation, including the preparation of this report, has been performed in accordance with the generally accepted standards of geotechnical engineering practice, which existed in the geographic area at the time the report was written. No other warranty, express or implied, is made. Please be advised that when performing infiltration testing services in relatively small areas that the testing may not fully model the actual full scale long term performance of a given site. This is particularly true where infiltration test data is to be used in the design of large infiltration areas such as those proposed for the site. Subsurface conditions, including infiltration rates, can change over time as fine-grained soils migrate. It is not warranted that such information and interpretation cannot be superseded by future geotechnical engineering developments. We emphasize that this report is valid for the project outlined above and should not be used for any other sites.

9. CONCLUSIONS AND RECOMMENDATIONS

9.1 General

9.1.1 Based upon the data collected during this investigation, and from a geotechnical engineering standpoint, it is our opinion that the site is suitable for the proposed construction of improvements at the site as planned, provided the recommendations contained in this report are incorporated into the project design and construction. Conclusions and recommendations provided in this report are based on our review of available literature, analysis of data obtained from our field exploration and laboratory testing program, and our understanding of the proposed development at this time.

9.1.2 The primary geotechnical constraints identified in our investigation is the presence of potential fill material and presence of compressible soils at the site. Recommendations to mitigate the effects of these soils are provided in this report.

9.1.3 No significant fill soils were encountered in our borings. The northern boundary of the site was a ravine prior to grading in 2009 and 2010. The bottom of the ravine could be 15 to 20 feet deeper than the current site grade. Fill material within the previous ravine area is anticipated to be at least 15 to 20 feet thick. Undocumented fill materials are not suitable to support any future

structures and should be replaced with Engineered Fill. Verification of the extent of fill should be determined during site grading. The extent and consistency of the fills should be verified during site construction. Prior to fill placement, SALEM Engineering Group, Inc. should inspect the bottom of the excavation to verify the fill condition.

9.1.4 Surface vegetation consisting of grasses and other similar vegetation should be removed by stripping to a sufficient depth to remove organic-rich topsoil. The upper 6 to 8 inches of the soils containing, vegetation, roots and other objectionable organic matter encountered at the time of grading should be stripped and removed from the surface. Deeper stripping may be required in localized areas. The stripped vegetation, will not be suitable for use as Engineered Fill or within 5 feet of building pads or within pavement areas. However, stripped topsoil may be stockpiled and reused in landscape or non-structural areas or exported from the site.

9.1.5 Tree root systems in the proposed improvement areas should be removed to a minimum depth of 4 feet and to such an extent which would permit removal of all roots. Tree roots removed in parking areas may be limited to the upper 1½ feet of the ground surface. Backfill of tree root excavations is not permitted until all exposed surfaces have been inspected and the Soils Engineer is present for the proper control of backfill placement and compaction. Burning in areas which are to receive fill materials shall not be permitted.

9.1.6 Site demolition activities shall include removal of all surface obstructions not intended to be incorporated into final site design. In addition, underground buried structures and/or utility lines encountered during demolition and construction should be properly removed and the resulting excavations backfilled with Engineered Fill. It is suspected that possible demolition activities of the existing structures may disturb the upper soils. After demolition activities, it is recommended that disturbed soils be removed and/or recompacted.

9.1.7 The near-surface onsite soils are moisture-sensitive and are moderately compressible under saturated conditions. Proposed structures may experience excessive post-obstruction settlement, when the foundation soil become near saturated. The compressible or weak soils should be removed and re-compacted according to the recommendations in the Grading section of this report (Section 9.5).

9.1.8 Additional recommendations for pavement areas, retaining wall proposed on northern boundary, and pavement areas on the northern boundary presented in section 9.5 of this report, should be followed.

9.1.9 Based on the subsurface conditions at the site and the anticipated structural loading, we anticipate that the proposed building may be supported using conventional shallow foundations provided that the recommendations presented herein are incorporated in the design and construction of the project.

9.1.10 SALEM shall be present at the site during site demolition and preparation to observe site clearing/demolition, preparation of exposed surfaces after clearing, and placement, treatment and compaction of fill material.

9.1.11 SALEM's observations should be supplemented with periodic compaction tests to establish substantial conformance with these recommendations. Moisture content of footings and slab subgrade should be tested immediately prior to concrete placement. SALEM should observe foundation excavations prior to placement of reinforcing steel or concrete to assess whether the actual bearing conditions are compatible with the conditions anticipated during the preparation of this report.

9.2 Seismic Design Criteria

9.2.1 For seismic design of the structures, and in accordance with the seismic provisions of the 2019 CBC, our recommended parameters are shown below. These parameters were determined using California's Office of Statewide Health Planning and Development (OSHPD) Seismic Design Map Tool Website (https://seismicmaps.org/) in accordance with the 2019 CBC. The Site Class was determined based on the soils encountered during our field exploration

TABLE 9.2.1

*** Determined per ASCE Table 11.4-2 for use in calculating T_S only.**

9.2.2 Site Specific Ground Motion Analysis was not included in the scope of this investigation. Per ASCE 11.4.8, structures on Site Class D with S_1 greater than or equal to 0.2 may require Site Specific Ground Motion Analysis. However, a site specific motion analysis may not be required based on Exceptions listed in ASCE 11.4.8. The Structural Engineer should verify whether Exception No. 2 of ASCE 7-16, Section 11.4.8, is valid for the site. In the event that a site specific ground motion analysis is required, SALEM should be contacted for these services.

9.2.3 Conformance to the criteria in the above table for seismic design does not constitute any kind of guarantee or assurance that significant structural damage or ground failure will not occur if a large earthquake occurs. The primary goal of seismic design is to protect life, not to avoid all damage, since such design may be economically prohibitive.

9.3 Soil and Excavation Characteristics

9.3.1 Based on the soil conditions encountered in our soil borings, the upper soils can be excavated with moderate effort using conventional heavy-duty earthmoving equipment. Large heavy-duty earthwork equipment will likely be required for deeper excavations.

9.3.2 It is the responsibility of the contractor to ensure that all excavations and trenches are properly shored and maintained in accordance with applicable Occupational Safety and Health Administration (OSHA) rules and regulations to maintain safety and maintain the stability of adjacent existing improvements.

9.3.3 The near surface soils identified as part of our investigation are, generally, moist to wet due to the absorption characteristics of the soil. Earthwork operations may encounter moist unstable soils which may require removal to a stable bottom. Exposed native soils exposed as part of site grading operations shall not be allowed to dry out and should be kept continuously moist prior to placement of subsequent fill.

9.4 Materials for Fill

9.4.1 Excavated soils generated from cut operations at the site are suitable for use as general Engineered Fill in structural areas provided do not exhibit an expansion index above 30 (EI > 30), do not contain deleterious matter, debris, organic material, or rock material larger than 3 inches in maximum dimension.

9.4.2 Any soil with an expansion index above 30 and below 50 (30<EI<50) should not be placed within the upper 12 inches within building pad or exterior flatwork areas.

9.4.3 The preferred materials specified for Engineered Fill are suitable for most applications with the exception of exposure to erosion. Project site winterization and protection of exposed soils during the construction phase should be the sole responsibility of the Contractor, since they have complete control of the project site.

9.4.4 Import soil shall be well-graded, slightly cohesive silty fine sand or sandy silt, with relatively impervious characteristics when compacted. A clean sand or very sandy soil is not acceptable

for this purpose. This material should be approved by the Engineer prior to use and should typically possess the soil characteristics summarized below in Table 9.4.3.

TABLE 9.4.4
IMPORT FILL REQUIREMENTS

Minimum Percent Passing No. 200 Sieve	20
Maximum Percent Passing No. 200 Sieve	50
Minimum Percent Passing No. 4 Sieve	80
Maximum Particle Size	3"
Maximum Plasticity Index	12
Maximum CBC Expansion Index	20

9.4.5 Environmental characteristics and corrosion potential of import soil materials should also be considered.

9.4.6 Proposed import materials should be sampled, tested, and approved by SALEM prior to its transportation to the site.

9.5 Grading

9.5.1 A SALEM representative should be present during all site clearing and grading operations to test and observe earthwork construction. This testing and observation is an integral part of our service as acceptance of earthwork construction is dependent upon compaction of the material and the stability of the material. The Geotechnical Engineer may reject any material that does not meet compaction and stability requirements. Further recommendations of this report are predicated upon the assumption that earthwork construction will conform to recommendations set forth in this section as well as other portions of this report.

9.5.2 A preconstruction conference should be held at the site prior to the beginning of grading operations with the owner, contractor, civil engineer and geotechnical engineer in attendance.

9.5.3 Site preparation should begin with removal of existing surface/subsurface structures, underground utilities (as required), any existing uncertified fill, and debris. Excavations or depressions resulting from site clearing operations, or other existing excavations or depressions, should be restored with Engineered Fill in accordance with the recommendations of this report.

9.5.4 Surface vegetation consisting of grasses and other similar vegetation should be removed by stripping to a sufficient depth to remove organic-rich topsoil. The upper 4 to 8 inches of the soils containing vegetation, roots, and other objectionable organic matter encountered at the time of grading should be stripped and removed from the surface. Deeper stripping may be required in localized areas. In addition, existing concrete and asphalt materials shall be removed from areas of proposed improvements and stockpiled separately from excavated soil material. The stripped vegetation, asphalt, and concrete materials will not be suitable for use as Engineered Fill or within

5 feet of building pads or within pavement areas. However, stripped topsoil may be stockpiled and reused in landscape or non-structural areas or exported from the site.

9.5.5 Tree root systems in proposed improvement areas should be removed to a minimum depth of 3 feet and to such an extent which would permit removal of all roots greater than ½ inch in diameter. Tree roots removed in parking areas may be limited to the upper 1½ feet of the ground surface. Backfill of tree root excavations is not permitted until all exposed surfaces have been inspected and the Soils Engineer is present for the proper control of backfill placement and compaction. Burning in areas which are to receive fill materials shall not be permitted.

9.5.6 Any undocumented and uncertified fill materials encountered during grading should be removed and replaced with engineered fill. The actual depth of the overexcavation and recompaction should be determined by our field representative during construction.

9.5.7 Structural building pad areas should be considered as areas extending a minimum of 5 feet horizontally beyond the outside dimensions of buildings, including footings and non-cantilevered overhangs carrying structural loads.

9.5.8 Any soil with an expansion index above 30 and below 50 (30<EI<50) should not be placed within the upper 12 inches within building pad or exterior flatwork areas.

9.5.9 To minimize post-construction soil movement and provide uniform support for the proposed buildings, it is recommended that the overexcavation and recompaction within the proposed building areas be performed to a minimum depth of **three (3)** feet below existing grade or **two (2)** feet below proposed footing bottom or to a depth below all undocumented fill materials, whichever is deeper. Any undocumented fill materials encountered during grading should be removed and replaced with Engineered Fill. The overexcavation and recompaction should also extend laterally to a minimum of 5 feet beyond the outer edges of the proposed footings.

9.5.10 A 15- to 20- foot high retaining wall is proposed to separate the site area from lower grades adjacent to existing drainage culvert. To minimize post-construction soil movement and provide uniform support for the proposed footing of the retaining wall, it is recommended that overexcavation and recompaction be performed to a minimum depth of **four (4)** feet below existing grade, to a depth below all undocumented fill materials, or to a depth below all loose/compressible sedimentary soils, whichever is deeper. Any soils contain more than 3 percent of organic materials cannot be reused as engineered fill. The extent of the overexcavation and recompaction should be verified during site grading. The overexcavation and recompaction should also extend laterally to a minimum of 5 feet beyond the outer edges of the proposed footings.

9.5.11 Within pavement areas, overexcavation and recompaction should be performed to a minimum depth of **one (1) foot** below existing grade or proposed grade, whichever is deeper. The overexcavation and recompaction should also extend laterally to a minimum of 2 feet beyond the pavement edges. Any fill materials encountered during grading should be removed and replaced with engineered fill.

9.5.12 Thick fill materials are anticipated on the northern boundary of the site, where the ravine used to exist. One of the proposed canopies, underground storage tanks, and pavement are located in that area. Undocumented fill materials are not suitable to support any future structures and should be excavated and replaced with Engineered Fill. Prior to fill placement, SALEM should inspect the bottom of the excavation to verify the bottom condition. The owner may elect not to recompact the existing fill within paved areas. However, the owner should be aware that these areas may settle, which may require annual maintenance.

9.5.13 Prior to placement of fill soils, the upper 8 to 10 inches of native subgrade soils should be scarified, moisture-conditioned to slightly higher than the optimum moisture content and recompacted to a minimum of 90% of the maximum dry density based on ASTM D1557-07 Test Method.

9.5.14 All Engineered Fill (including scarified ground surfaces and backfill) should be placed in thin lifts to allow for adequate bonding and compaction (typically 6 to 8 inches in loose thickness).

9.5.15 Engineered Fill soils should be moisture conditioned to slightly above optimum moisture content, and compacted to at least 90% relative compaction.

9.5.16 Non-Expansive Engineered Fill should be moisture conditioned to near optimum moisture content, and compacted to at least 95% relative compaction.

9.5.17 An integral part of satisfactory fill placement is the stability of the placed lift of soil. If placed materials exhibit excessive instability as determined by a SALEM field representative, the lift will be considered unacceptable and shall be remedied prior to placement of additional fill material. Additional lifts should not be placed if the previous lift did not meet the required dry density or if soil conditions are not stable.

9.5.18 Final pavement subgrade should be finished to a smooth, unyielding surface. We further recommend proof-rolling the subgrade with a loaded water truck (or similar equipment with high contact pressure) to verify the stability of the subgrade prior to placing aggregate base.

9.5.19 The most effective site preparation alternatives will depend on site conditions prior to grading. We should evaluate site conditions and provide supplemental recommendations immediately prior to grading, if necessary.

9.5.20 We do not anticipate groundwater or seepage to adversely affect construction if conducted during the drier months of the year (typically summer and fall). However, groundwater and soil moisture conditions could be significantly different during the wet season (typically winter and spring) as surface soil becomes wet; perched groundwater conditions may develop. Grading during this time period will likely encounter wet materials resulting in possible excavation and fill placement difficulties.

Project site winterization consisting of placement of aggregate base and protecting exposed soils during construction should be performed. If the construction schedule requires grading operations during the wet season, we can provide additional recommendations as conditions warrant.

9.5.21 Wet soils may become non conducive to site grading as the upper soils yield under the weight of the construction equipment. Therefore, mitigation measures should be performed for stabilization. Typical remedial measures include: discing and aerating the soil during dry weather; mixing the soil with dryer materials; removing and replacing the soil with an approved fill material or placement of slurry, crushed rocks or aggregate base material; or mixing the soil with an approved lime or cement product. The most common remedial measure of stabilizing the bottom of the excavation due to wet soil condition is to reduce the moisture of the soil to near the optimum moisture content by having the subgrade soils scarified and aerated or mixed with drier soils prior to compacting. However, the drying process may require an extended period of time and delay the construction operation.

To expedite the stabilizing process, slurry or crushed rock may be utilized for stabilization provided this method is approved by the owner for the cost purpose. If the use of slurry, crushed rock is considered, it is recommended that the upper soft and wet soils be replaced by 6 to 24 inches of 2-sack slurry or ¾-inch to 1-inch crushed rocks. The thickness of the slurry or rock layer depends on the severity of the soil instability. The recommended 6 to 24 inches of crushed rock material will provide a stable platform. It is further recommended that lighter compaction equipment be utilized for compacting the crushed rock. A layer of geofabric is recommended to be placed on top of the compacted crushed rock to minimize migration of soil particles into the voids of the crushed rock, resulting in soil movement. Although it is not required, the use of geogrid (e.g. Tensar TX7) below the slurry or crushed rock will enhance stability and reduce the required thickness of crushed rock necessary for stabilization. Our firm should be consulted prior to implementing remedial measures to provide appropriate recommendations.

9.6 Shallow Foundations

9.6.1 The site is suitable for use of conventional shallow foundations consisting of continuous footings and isolated pad footings bearing in properly compacted Engineered Fill.

9.6.2 The bearing wall footings considered for the structure should be continuous with a minimum width of 15 inches and extend to a minimum depth of 18 inches below the lowest adjacent grade. Isolated column footings should have a minimum width of 24 inches and extend a minimum depth of 18 inches below the lowest adjacent grade.

9.6.3 The bottom of footing excavations should be maintained free of loose and disturbed soil. Footing concrete should be placed into a neat excavation.

9.6.4 Footings proportioned as recommended above may be designed for the maximum allowable soil bearing pressures shown in the table below.

Loading Condition	Allowable Bearing
Dead Load Only	2,000 psf
Dead-Plus-Live Load	2,500 psf
Total Load, Including Wind or Seismic Loads	3,325 psf

9.6.5 For design purposes, total settlement due to static loading on the order of 1 inch may be assumed for shallow footings. Differential settlement due to static loading, along a 20-foot exterior wall footing or between adjoining column footings, should be ½ inch, producing an angular distortion of 0.002. Most of the settlement is expected to occur during construction as the loads are applied. However, additional post-construction settlement may occur if the foundation soils are flooded or saturated. The footing excavations should not be allowed to dry out any time prior to pouring concrete.

9.6.6 Resistance to lateral footing displacement can be computed using an allowable coefficient of friction factor of 0.35 acting between the base of foundations and the supporting native subgrade.

9.6.7 Lateral resistance for footings can alternatively be developed using an equivalent fluid passive pressure of 300 pounds per cubic foot acting against the appropriate vertical native footing faces. The frictional and passive resistance of the soil may be combined without reduction in determining the total lateral resistance. An increase of one-third is permitted when using the alternate load combinations that includes wind or earthquake loads.

9.6.8 Underground utilities running parallel to footings should not be constructed in the zone of influence of footings. The zone of influence may be taken to be the area beneath the footing and within a 1:1 plane extending out and down from the bottom edge of the footing.

9.6.9 The foundation subgrade should be sprinkled as necessary to maintain a moist condition without significant shrinkage cracks as would be expected in any concrete placement. Prior to placing rebar reinforcement, foundation excavations should be evaluated by a representative of SALEM for appropriate support characteristics and moisture content. Moisture conditioning may be required for the materials exposed at footing bottom, particularly if foundation excavations are left open for an extended period.

9.7 Caisson Foundations for Canopy

9.7.1 It is recommended that the caisson foundation should have a minimum diameter of 24 inches and a minimum depth of 8 feet below the lowest adjacent grade.

9.7.2 The caissons may be designed using an allowable sidewall friction of 250 psf. This value is for dead-plus-live loads. An allowable end bearing capacity of 3,000 psf may be used provided that the bottom of the caisson is cleaned with the use of a clean-out bucket or equivalent and inspected by our representative prior to placement of reinforcement and concrete. An increase of one-third is permitted when using the alternate load combination that includes wind or earthquake loads.

9.7.3 Uplift loads can be resisted by caissons using an allowable sidewall friction of 200 psf of the surface area and the weight of the caisson.

9.7.4 The total static settlement of the caisson footing is not expected to exceed 1 inch. Differential static settlement should be less than ½ inch. Most of the settlement is expected to occur during construction as the loads are applied.

9.7.5 The drilled caissons may be designed for a lateral capacity of 300 pounds per square foot per foot of depth below the lowest adjacent grade to a maximum of 4,500 psf.

9.7.6 The top one-foot of adjacent subgrade should be deleted from the passive pressure computation.

9.7.7 Sandy soils were encountered at the site. Casing of the drilled caisson will be required if caving is encountered or the drilled hole has to be left open for an extended period of time.

9.8 Concrete Slabs-on-Grade

9.8.1 Slab thickness and reinforcement should be determined by the structural engineer based on the anticipated loading. We recommend that non-structural slabs-on-grade be at least 4 inches thick and underlain by six (6) inches of compacted granular aggregate subbase material compacted to at least 95% relative compaction.

9.8.2 Granular aggregate subbase material shall conform to ASTM D-2940, Latest Edition (Table 1, bases) with at least 95 percent passing a 1½-inch sieve and not more than 8% passing a No. 200 sieve or clean Crushed Aggregate Base (CAB) to prevent capillary moisture rise. Crushed Miscellaneous Base (CMB) containing recycled materials should not be used as granular aggregate subbase within the building areas.

9.8.3 We recommend reinforcing slabs, at a minimum, with No. 4 reinforcing bars placed 18 inches on center, each way.

9.8.4 Slabs subject to structural loading may be designed utilizing a modulus of subgrade reaction K of 140 pounds per square inch per inch. The K value was approximated based on inter-relationship of soil classification and bearing values (Portland Cement Association, Rocky Mountain Northwest).

9.8.5 The spacing of crack control joints should be designed by the project structural engineer. In order to regulate cracking of the slabs, we recommend that construction joints or control joints be provided at a maximum spacing of 15 feet in each direction for 5-inch thick slabs and 12 feet for 4-inch thick slabs.

9.8.6 Crack control joints should extend a minimum depth of one-fourth the slab thickness and should be constructed using saw-cuts or other methods as soon as practical after concrete placement. The exterior floors should be poured separately in order to act independently of the walls and foundation system.

9.8.7 It is recommended that the utility trenches within the structure be compacted, as specified in our report, to minimize the transmission of moisture through the utility trench backfill. Special attention to the immediate drainage and irrigation around the structures is recommended.

9.8.8 Moisture within the structure may be derived from water vapors, which were transformed from the moisture within the soils. This moisture vapor penetration can affect floor coverings and produce mold and mildew in the structure. To minimize moisture vapor intrusion, it is recommended that a vapor retarder be installed in accordance with manufacturer's

recommendations and/or ASTM guidelines, whichever is more stringent. In addition, ventilation of the structure is recommended to reduce the accumulation of interior moisture.

9.8.9 In areas where it is desired to reduce floor dampness where moisture-sensitive coverings are anticipated, construction should have a suitable waterproof vapor retarder (a minimum of 15 mils thick polyethylene vapor retarder sheeting, Raven Industries "VaporBlock 15, Stego Industries 15 mil "StegoWrap" or W.R. Meadows Sealtight 15 mil "Perminator") incorporated into the floor slab design. The water vapor retarder should be decay resistant material complying with ASTM E96 not exceeding 0.04 perms, ASTM E154 and ASTM E1745 Class A. The vapor barrier should be placed between the concrete slab and the compacted granular aggregate subbase material. The water vapor retarder (vapor barrier) should be installed in accordance with ASTM Specification E 1643-94.

9.8.10 The concrete may be placed directly on vapor retarder. The vapor retarder should be inspected prior to concrete placement. Cut or punctured retarder should be repaired using vapor retarder material lapped 6 inches beyond damaged areas and taped.

9.8.11 The recommendations of this report are intended to reduce the potential for cracking of slabs due to soil movement. However, even with the incorporation of the recommendations presented herein, foundations, stucco walls, and slabs-on-grade may exhibit some cracking due to soil movement. This is common for project areas that contain expansive soils since designing to eliminate potential soil movement is cost prohibitive. The occurrence of concrete shrinkage cracks is independent of the supporting soil characteristics. Their occurrence may be reduced and/or controlled by limiting the slump of the concrete, proper concrete placement and curing, and by the placement of crack control joints at periodic intervals, in particular, where re-entrant slab corners occur.

9.8.12 Proper finishing and curing should be performed in accordance with the latest guidelines provided by the American Concrete Institute, Portland Cement Association, and ASTM.

9.9 Lateral Earth Pressures and Frictional Resistance

9.9.1 Active, at-rest and passive unit lateral earth pressures against footings and walls are summarized in the table below:

Lateral Pressure Conditions	Allowable Equivalent Fluid Pressure, pcf
Active Pressure, Drained	40
At-Rest Pressure, Drained	60
Passive Pressure	300
Related Parameters	
Allowable Coefficient of Friction	0.35
In-Place Soil Density (lbs/ft^3)	120

9.9.2 Active pressure applies to walls, which are free to rotate. At-rest pressure applies to walls, which are restrained against rotation. The preceding lateral earth pressures assume sufficient drainage behind retaining walls to prevent the build-up of hydrostatic pressure.

9.9.3 The top one-foot of adjacent subgrade should be deleted from the passive pressure computation.

9.9.4 A safety factor consistent with the design conditions should be included in their usage.

9.9.5 For stability against lateral sliding, which is resisted solely by the passive pressure, we recommend a minimum safety factor of 1.5.

9.9.6 For stability against lateral sliding, which is resisted by the combined passive and frictional resistance, a minimum safety factor of 2.0 is recommended.

9.9.7 For lateral stability against seismic loading conditions, we recommend a minimum safety factor of 1.1.

9.9.8 For dynamic seismic lateral loading the following equation shall be used:

Dynamic Seismic Lateral Loading Equation
Dynamic Seismic Lateral Load = $\frac{3}{8}\gamma K_h H^2$
Where: γ = In-Place Soil Density
K_h = Horizontal Acceleration = $\frac{2}{3}PGA_M$
H = Wall Height

9.10 Retaining Walls

9.10.1 Retaining and/or below grade walls should be drained with either perforated pipe encased in free-draining gravel or a prefabricated drainage system. The gravel zone should have a minimum width of 12 inches wide and should extend upward to within 12 inches of the top of the wall. The upper 12 inches of backfill should consist of native soils, concrete, asphaltic-concrete or other suitable backfill to minimize surface drainage into the wall drain system. The gravel should conform to Class II permeable materials graded in accordance with the current CalTrans Standard Specifications.

9.10.2 Prefabricated drainage systems, such as Miradrain®, Enkadrain®, or an equivalent substitute, are acceptable alternatives in lieu of gravel provided they are installed in accordance with the manufacturer's recommendations. If a prefabricated drainage system is proposed, our firm should review the system for final acceptance prior to installation.

9.10.3 Drainage pipes should be placed with perforations down and should discharge in a non-erosive manner away from foundations and other improvements. The top of the perforated pipe should be placed at or below the bottom of the adjacent floor slab or pavements. The pipe should be placed in the center line of the drainage blanket and should have a minimum diameter of 4 inches. Slots should be no wider than 1/8-inch in diameter, while perforations should be no more than ¼-inch in diameter.

9.10.4 If retaining walls are less than 5 feet in height, the perforated pipe may be omitted in lieu of weep holes on 4 feet maximum spacing. The weep holes should consist of 2-inch minimum diameter holes (concrete walls) or unmortared head joints (masonry walls) and placed no higher than 18 inches above the lowest adjacent grade. Two 8-inch square overlapping patches of geotextile fabric (conforming to the CalTrans Standard Specifications for "edge drains") should be affixed to the rear wall opening of each weep hole to retard soil piping.

9.10.5 During grading and backfilling operations adjacent to any walls, heavy equipment should not be allowed to operate within a lateral distance of 5 feet from the wall, or within a lateral distance equal to the wall height, whichever is greater, to avoid developing excessive lateral pressures. Within this zone, only hand operated equipment ("whackers," vibratory plates, or pneumatic compactors) should be used to compact the backfill soils.

9.11 Temporary Excavations

9.11.1 We anticipate that the majority of the near surface site soils will be classified as Cal-OSHA "Type B" soil when encountered in excavations during site development and construction. If active seepage or layers of very soft non-cohesive soil are encountered, the Cal-OSHA classification should be downgraded to "Type C". Excavation sloping, benching, the use of trench shields, and the placement of trench spoils should conform to the latest applicable Cal-OSHA standards. The contractor should have a Cal-OSHA-approved "competent person" onsite during excavation to evaluate trench conditions and make appropriate recommendations where necessary.

9.11.2 It is the contractor's responsibility to provide sufficient and safe excavation support as well as protecting nearby utilities, structures, and other improvements which may be damaged by earth movements. All onsite excavations must be conducted in such a manner that potential surcharges from existing structures, construction equipment, and vehicle loads are resisted. The surcharge area may be defined by a 1:1 projection down and away from the bottom of an existing foundation or vehicle load.

9.11.3 Temporary excavations and slope faces should be protected from rainfall and erosion. Surface runoff should be directed away from excavations and slopes.

9.11.4 Open, unbraced excavations in undisturbed soils should be made according to the slopes presented in the following table:

RECOMMENDED EXCAVATION SLOPES

Depth of Excavation (ft)	Slope (Horizontal : Vertical)
0-5	¾:1
5-10	1½:1

9.11.5 If, due to space limitation, excavations near property lines or existing structures are performed in a vertical position, slot cuts, braced shorings or shields may be used for supporting vertical excavations. Therefore, in order to comply with the local and state safety regulations, a properly designed and installed shoring system would be required to accomplish planned excavations and

installation. A Specialty Shoring Contractor should be responsible for the design and installation of such a shoring system during construction.

9.11.6 Braced shorings should be designed for a maximum pressure distribution of 30H, (where H is the depth of the excavation in feet). The foregoing does not include excess hydrostatic pressure or surcharge loading. Fifty percent of any surcharge load, such as construction equipment weight, should be added to the lateral load given herein. Equipment traffic should concurrently be limited to an area at least 3 feet from the shoring face or edge of the slope.

9.11.7 The excavation and shoring recommendations provided herein are based on soil characteristics derived from the borings within the area. Variations in soil conditions will likely be encountered during the excavations. SALEM Engineering Group, Inc. should be afforded the opportunity to provide field review to evaluate the actual conditions and account for field condition variations not otherwise anticipated in the preparation of this recommendation. Slope height, slope inclination, or excavation depth should in no case exceed those specified in local, state, or federal safety regulation, (e.g. OSHA) standards for excavations, 29 CFR part 1926, or Assessor's regulations.

9.12 Underground Utilities

9.12.1 Underground utility trenches should be backfilled with properly compacted material. The material excavated from the trenches should be adequate for use as backfill provided it does not contain deleterious matter, vegetation or rock larger than 3 inches in maximum dimension. Trench backfill should be placed in loose lifts not exceeding 8 inches and compacted to at least 90% relative compaction at or above optimum moisture content.

9.12.2 Bedding and pipe zone backfill typically extends from the bottom of the trench excavations to approximately 6 to 12 inches above the crown of the pipe. Pipe bedding and backfill material should conform to the requirements of the governing utility agency.

9.12.3 It is suggested that underground utilities crossing beneath new or existing structures be plugged at entry and exit locations to the building or structure to prevent water migration. Trench plugs can consist of on-site clay soils, if available, or sand cement slurry. The trench plugs should extend 2 feet beyond each side of individual perimeter foundations.

9.12.4 The contractor is responsible for removing all water-sensitive soils from the trench regardless of the backfill location and compaction requirements. The contractor should use appropriate equipment and methods to avoid damage to the utilities and/or structures during fill placement and compaction.

9.13 Surface Drainage

9.13.1 Proper surface drainage is critical to the future performance of the project. Uncontrolled infiltration of irrigation excess and storm runoff into the soils can adversely affect the performance of the planned improvements. Saturation of a soil can cause it to lose internal shear strength and increase its compressibility, resulting in a change to important engineering properties. Proper drainage should be maintained at all times.

9.13.2 The ground immediately adjacent to the foundation shall be sloped away from the building at a slope of not less than 5 percent for a minimum distance of 10 feet.

9.13.3 Impervious surfaces within 10 feet of the building foundation shall be sloped a minimum of 2 percent away from the building and drainage gradients maintained to carry all surface water to collection facilities and off site. These grades should be maintained for the life of the project. Ponding of water should not be allowed adjacent to the structure. Over-irrigation within landscaped areas adjacent to the structure should not be performed.

9.13.4 Roof drains should be installed with appropriate downspout extensions out-falling on splash blocks so as to direct water a minimum of 5 feet away from the structures or be connected to the storm drain system for the development.

9.14 Pavement Design

9.14.1 Based on site soil conditions, an R-value of 25 was used for the preliminary flexible asphaltic concrete pavement design. The R-value may be verified during grading of the pavement areas.

9.14.2 The asphaltic concrete (flexible pavement) is based on a 20 year pavement life for traffic indexes of 5.0 and 6.5. If higher traffic loading is anticipated, SALEM should be contacted to provide revised pavement thickness recommendations

TABLE 9.14.2
ASPHALT CONCRETE PAVEMENT

Traffic Index	Asphaltic Concrete	Clean Class II Aggregate Base*	Compacted Subgrade**
5.0 (Parking & Vehicle Drive Areas)	3.0"	6.0"	12.0"

10. PLAN REVIEW, CONSTRUCTION OBSERVATION AND TESTING

10.1 Plan and Specification Review

10.1.1 SALEM should review the project plans and specifications prior to final design submittal to assess whether our recommendations have been properly implemented and evaluate if additional analysis and/or recommendations are required.

10.2 Construction Observation and Testing Services

10.2.1 The recommendations provided in this report are based on the assumption that we will continue as Geotechnical Engineer of Record throughout the construction phase. It is important to maintain continuity of geotechnical interpretation and confirm that field conditions encountered are similar to those anticipated during design. If we are not retained for these services, we cannot assume any responsibility for others interpretation of our recommendations, and therefore the future performance of the project.

10.2.2 SALEM should be present at the site during site preparation to observe site clearing, preparation of exposed surfaces after clearing, and placement, treatment and compaction of fill material.

10.2.3 SALEM's observations should be supplemented with periodic compaction tests to establish substantial conformance with these recommendations. Moisture content of footings and slab subgrade should be tested immediately prior to concrete placement. SALEM should observe foundation excavations prior to placement of reinforcing steel or concrete to assess whether the actual bearing conditions are compatible with the conditions anticipated during the preparation of this report.

11. LIMITATIONS AND CHANGED CONDITIONS

The analyses and recommendations submitted in this report are based upon the data obtained from the test borings drilled at the approximate locations shown on the Site Plan, Figure 2. The report does not reflect variations which may occur between borings. The nature and extent of such variations may not become evident until construction is initiated.

If variations then appear, a re-evaluation of the recommendations of this report will be necessary after performing on-site observations during the excavation period and noting the characteristics of such variations. The findings and recommendations presented in this report are valid as of the present and for the proposed construction. If site conditions change due to natural processes or human intervention on the property or adjacent to the site, or changes occur in the nature or design of the project, or if there is a substantial time lapse between the submission of this report and the start of the work at the site, the conclusions and recommendations contained in our report will not be considered valid unless the changes are reviewed by SALEM and the conclusions of our report are modified or verified in writing.

The validity of the recommendations contained in this report is also dependent upon an adequate testing and observations program during the construction phase. Our firm assumes no responsibility for construction compliance with the design concepts or recommendations unless we have been retained to perform the on-

site testing and review during construction. SALEM has prepared this report for the exclusive use of the owner and project design consultants.

SALEM does not practice in the field of corrosion engineering. It is recommended that a qualified corrosion engineer be consulted regarding protection of buried steel or ductile iron piping and conduit or, at a minimum, that manufacturer's recommendations for corrosion protection be closely followed. Further, a corrosion engineer may be needed to incorporate the necessary precautions to avoid premature corrosion of concrete slabs and foundations in direct contact with native soil. The importation of soil and aggregate to the site should be screened to determine the potential for corrosion to concrete and buried metal piping.

The report has been prepared in accordance with generally accepted geotechnical engineering practices in the area. No other warranties, either express or implied, are made as to the professional advice provided under the terms of our agreement and included in this report. If you have any questions, or if we may be of further assistance, please do not hesitate to contact our office at (909) 980-6455.

Respectfully Submitted,

Geologic Unit Explanation

Symbol Explination

Contact—Separates geologic-map units. Solid where meets map-accuracy standard; dashed where may not meet map-accuracy standard; dotted where concealed

Contact—Separates terraced alluvial units where younger unit is incised into older unit; hachures at base of slope, point toward topographically lower surface. Solid where meets map-accuracy standard; dashed where may not meet map-accuracy standard

Landslide crown scarp—Demarcates pull-away zone at head of landslide mass; may not meet map-accuracy standard. May form geologic contact between landslide mass and bedrock, or may separate discrete landslide masses. Hachures point downslope. Solid where meets map-accuracy standard; dashed where may not meet map-accuracy standard

Fault—Solid where meets map-accuracy standard; dashed where may not meet map-accuracy standard. Dotted where concealed by mapped covering unit; queried where existence uncertain. Hachures indicate scarp, with hachures on down-dropped block. Paired arrows indicate relative movement; single arrow indicates direction and amount of fault-plane dip. Bar and ball on down-thrown block

Thrust fault—Solid where meets map-accuracy standard; dashed where may not meet map-accuracy standard. Dotted where concealed by mapped covering unit; queried where existence uncertain. Sawteeth on upper plate; hachures at base of slope on downthrown block of fault scarp

Fault—Interpreted from seismic imaging; no locational accuracy implied (from Park and others,1995)

Fold axial plane—Solid where meets map-accuracy standard; dashed where may not meet map-accuracy standard. Dotted where concealed by mapped covering unit

Geologic Unit Explanation - Details

VERY YOUNG SURFICIAL MATERIALS—Sediment recently transported and deposited in channels and washes, on surfaces of alluvial fans and alluvial plains, in ephemeral lakes, and on hillslopes. Soil-profile development non-existent to weak. Includes:

Very young wash deposits (uppermost Holocene)—Sandy and gravelly sediment associated with stream channels and arroyos that are the sites of very recent sediment transport and deposition. Includes:

Qvywm — **Very young wash deposits, modern**—Very slightly to slightly consolidated sandy and gravelly sediment in active channels

Qvyw2 — **Very young wash deposits, unit 2**—Very slightly to slightly consolidated sandy and gravelly sediment that locally forms slightly elevated terraces along the margins of San Timoteo Creek

Qvyw1 — **Very young wash deposits, unit 1**—Very slightly to slightly consolidated sandy and gravelly sediment that locally forms slightly elevated terraces along the margins of San Timoteo Creek; surface supports mature trees and thin A horizons

Qvyfu — **Very young alluvial-fan deposits, undifferentiated (uppermost Holocene)**—Very slightly to slightly consolidated, undissected deposits of sandy and gravelly sediment that form actively sedimented parts of alluvial fans; occurs only locally

Qvylm — **Very young lacustrine deposits, modern (uppermost Holocene)**—Unconsolidated to slightly consolidated muddy and fine sandy sediment deposited in ephemeral lakes formed in lowlands by overbank flooding of San Jacinto River

YOUNG SURFICIAL DEPOSITS—Sedimentary units that are very slightly to moderately consolidated and slightly to moderately dissected. Alluvial-fan deposits (Qyf series) typically are sandy, but include subordinate gravelly sediment; axial-valley deposits (Qya series) are dominated by sandy sediment, with minor gravelly sediment and uncommon muddy sediment. Upper surfaces capped by slight to moderately developed pedogenic-soil profiles (A/AC to A/AC/Bcambic profiles having oxidized upper C horizon). Soil groups mapped by Knecht (1971) mainly are the Hanford and San Emigdio series, but include the Metz, Tujunga, and Grangeville series:

Young axial-valley deposits (Holocene and uppermost Pleistocene)—Slightly to moderately consolidated sandy, muddy, and gravelly sediment deposited by through-going streams of axial valleys; subunits distinguished on the basis of soil-profile development, relative position in the local terrace-riser succession, and degree of erosional dissection. Includes:

Qya5 — **Young axial-valley deposits, unit 5 (uppermost Holocene)**

Qya4 — **Young axial-valley deposits, unit 4 (upper Holocene)**

Qya3 — **Young axial-valley deposits, unit 3 (middle Holocene)**

Young alluvial-fan deposits (Holocene & uppermost Pleistocene)—Slightly to moderately consolidated sandy, gravelly, and muddy sediment deposited by streams flowing on alluvial-fan landforms. Units distinguished on the basis of soil-profile development and relative position in local terrace-riser succession. Includes:

Qyf5 — **Young alluvial-fan deposits, unit 5 (uppermost Holocene)**

Qyf4 — **Young alluvial-fan deposits, unit 4 (upper Holocene)**

Qyf3 — **Young alluvial-fan deposits, unit 3 (middle Holocene)**

Qyf1 — **Young alluvial-fan deposits, unit 1 (lower Holocene & uppermost Pleistocene)**

Qyfu — **Young alluvial-fan deposits, undifferentiated (lower Holocene & uppermost Pleistocene)**

Qyls — **Young landslide deposits (Holocene & uppermost Pleistocene)**—Slightly dissected slope-movement deposits. Locally may include old landslide material

Qyl5 — **Young lacustrine deposits, unit 5 (uppermost Holocene)**—Unconsolidated to slightly consolidated muddy and fine sandy sediment deposited in an ephemeral lake formed by flooding of San Jacinto River

OLD SURFICIAL DEPOSITS—Sedimentary units (Qof series, Qoa series) that are moderately consolidated, sandy and gravelly, and slightly to moderately dissected. Upper surfaces capped by moderately to well-developed pedogenic soils (A/AB/B/Cox profiles and Bt horizons as much as 1 to 2 m thick and maximum hues typically in the range of 10YR 5/4 and 6/4 [yellowish brown and light yellowish brown] through 7.5YR 6/4 to 4/4 [light brown to dark brown] but reaching 5YR 5/6 [yellowish red]). Soil groups mapped by Knecht (1971) include Greenfield series and weaker soils of Monserate and Ramona series. Includes:

Qosu — **Old surficial deposits, undifferentiated (upper to middle Pleistocene)**—Sandy and gravelly sediment of unspecified genesis

Old axial-valley deposits (upper to middle Pleistocene)—Moderately consolidated sandy and silty sediment and subordinate gravelly sediment deposited by through-going streams of axial valleys

Qoau — **Old axial-valley deposits, undifferentiated (upper to middle Pleistocene)**

Old alluvial-fan deposits (upper to middle Pleistocene)—Sandy, gravelly, and silty sediment deposited by streams that formed alluvial-fan landforms; subunits distinguished on the basis of soil-profile development, relative position in the local terrace-riser succession, and degree of erosional dissection. Includes:

Qof3 — **Old alluvial-fan deposits, unit 3 (upper Pleistocene)**

Qof2 — **Old alluvial-fan deposits, unit 2 (upper to middle Pleistocene)**

Qof1 — **Old alluvial-fan deposits, unit 1 (upper to middle Pleistocene)**

Qofu — **Old alluvial-fan deposits, undifferentiated (upper to middle Pleistocene)**

Qols — **Old landslide deposits (upper to middle Pleistocene)**—Moderately dissected slope-movement deposits. Probably inactive under current climatic and tectonic conditions

VERY OLD SURFICIAL DEPOSITS—Sedimentary units (Qvo series) that are moderately consolidated and moderately to well dissected. Consists mainly of alluvial-fan deposits (Qvof units) that typically are sandy and gravelly, but locally includes muddy sediment. Upper surfaces capped by moderate to well-developed pedogenic soils (A/AB/B/Cox profiles having Bt horizons as much as 2 to 3 m thick and maximum hues in the range of 7.5YR 6/4 to 4/4 [light brown to dark brown] to 2.5YR 5/6 [red]). Soil groups mapped by Knecht (1971) include stronger soils of the Ramona and Placentia series. Includes:

Qvors — **Very old residuum and (or) pedogenic soil (middle to lower Pleistocene)**—Consists of residuum and (or) pedogenic-soil profile developed on Sedimentary deposits of Live Oak Canyon (unit Qlo); has mature A/AB/B soil profile having Bt horizon as much as 3 m thick, and commonly laced with stringers, nodules, and irregular seams of $CaCO_3$ (caliche)

Very old alluvial-fan deposits (middle to lower Pleistocene)—Sandy and gravelly deposits having subunits distinguished from each other on the basis of soil-profile development and relative position in local terrace-riser succession. Includes:

Qvof3 — **Very old alluvial-fan deposits, unit 3 (middle Pleistocene)**

Qvofu — **Very old alluvial-fan deposits, undifferentiated (middle Pleistocene)**

CENOZOIC SEDIMENTARY MATERIALS

Qlo — **Sedimentary deposits of Live Oak Canyon (Pleistocene)**—Unconsolidated and consolidated nonmarine sedimentary material; sediment typically moderately consolidated, rock well consolidated to lithified. Mainly consists of gravelly and conglomeratic material interbedded with subequal sandy sediment and rock; muddy sediment and mudrock minor

San Timoteo formation of Frick (1921) (Pleistocene & Pliocene)—Nonmarine sediment and sedimentary rock referred to by Frick (1921, p. 283, 317) as his "San Timoteo formation" or "Upper San Timoteo Deposition". Sandy and conglomeratic rocks contain clasts derived from crystalline rocks of Transverse Ranges-type; clasts of Peninsular Ranges-type do not occur. Throughout its regional extent, formation ranges in age from Pliocene to early Pleistocene (Albright, 1999). Until a type section is designated and described, map unit is classified informally. Subdivided into:

Tstm — **Middle member (upper and middle Pliocene)**—Forms middle part of San Timoteo formation. Consists of four principal lithologies that recur throughout sequence: (1) thick sheet-like layers of conglomeratic rock; (2) light-gray to white sandstone and slightly conglomeratic sandstone; (3) reddish mudstone and sandstone; and (4) locally significant but minor grayish-green mudrock. Lithologies (1) and (3) distinguish middle member from other members of formation. Lower contact transitional across intervals as thick as 50 m, and unit appears to interfinger southeastward and eastward with underlying lower member; upper contact not exposed in quadrangle, but in adjacent Sunnymead quadrangle the middle member is transitional with overlying upper member. Pliocene age (Blancan) based on magnetostratigraphic correlation and stratigraphic relations with underlying and overlying units that contain vertebrate fossils (Albright, 1999).

Lower member (lower Pliocene)—Forms lower part of San Timoteo formation of Frick (1921). Subdivided into:

Tstls — **Sandstone unit (lower Pliocene)**—Consists dominantly of sandy rock interbedded with sparse conglomeratic rock; mudrock minor, except in stratigraphic sequence west of Moreno Valley strand of San Jacinto Fault at west edge of quadrangle. Rock is well consolidated to lithified, with some intervals cemented by calcareous and (or) siliceous cement. Contact with overlying middle member (unit Tstm) is transitional across stratigraphic interval as much as 50 m thick

Tstlr — **Ripple-laminated unit (lower Pliocene)**—Consists of two distinctive interbedded lithologies: (1) ledge-forming ripple-laminated sandstone and (2) recessive greenish-gray mudstone

Tstlf — **Fine-grained unit (lower Pliocene)**—Mainly light-gray to grayish-brown mudstone and calcareous mudstone that are fissil- and chippy-weathering, and that form recessive slopes. Rock texturally massive to faintly laminated, locally has mudcracks and rain-drop impressions, and locally contains thin nodules, needles, and seams if gypsum. Early Pliocene age (Blancan) based on magnetostratigraphic correlation and stratigraphic relations with underlying and overlying units that contain vertebrate fossils (Albright, 1999)

Mt. Eden formation of Frick (1921), revised herein (upper Miocene)—Nonmarine sedimentary rock referred to by Frick (1921, p. 283, 317) as his "Eden formation" or "Lower San Timoteo Deposition". Upper part of formation is late Miocene in age (late Hemphillian) on the basis of vertebrate fossils collected from the Mt. Eden area (Frick, 1921; May and Repenning, 1982; Albright, 1999). Until a type section is designated, unit is classified informally. Subdivided into:

Tmeh — **Heterogeneous member (upper Miocene)**—In Mt. Eden area, forms upper part of "Eden formation" of Frick (1921). Includes several lithotypes, two of which Frick (1921) emphasized in his original characterization: (1) slope-forming, greenish-gray mudstone, and (2) white nodular and lenticular limestone. Also includes (3) lithic arkosic sandstone and conglomeratic sandstone, and (4) greenish-gray siltstone and fine bioitic sandstone. These lithotypes occur in variable proportions throughout the member, although the finer grained rocks occur mainly in its upper part. Sandy and conglomeratic rocks contain clasts derived exclusively from crystalline rocks of Peninsular Ranges-type. Most of the vertebrate fossils collected by Frick (1921) are from this member where it crops out on the north slope of Mt. Eden.

Tmea — **Arkosic and lithic member (upper Miocene)**—Forms most of Mt. Eden formation in both Mt. Eden area and Laborde Canyon. At any specified location unit is fairly homogeneous in lithology; however, the unit in Mt. Eden area tends to be more brownish than in Laborde Canyon area, where rock tends to be more grayish. In all instances, rock is well consolidated to lithified, is recessive and slope-forming rather than ledgeforming, is thin- to very thick bedded to crudely stratified, and contains angular to subrounded particles derived exclusively from crystalline rocks of Peninsular Ranges-type (aplite, gneiss, metaquartzite, marble, schist, and granitoids). Sandy rock predominates over conglomeratic rock. Depositional fabrics mainly texturally massive, less commonly crudely flat laminated; cross laminations (shallow trough laminations, small-scale tabular laminations) present but not common; sedimentary structures better developed in finer grained rock than coarser-grained rock

Tmeb — **Boulder conglomerate member (upper Miocene)**—Lenticular bodies of monolithologic conglomerate interstratified with unit Tmea. Particle size ranges from pebbles to boulders as much as 6 m in dimension, with larger particles surrounded by grusy sand- and granule-size matrix; particles consist of biotite-hornblende tonalite identical to tonalite of Lamb Canyon (unit Ktlc)

Tmes — **Sandstone marker unit (Miocene)**—Thin lenticular interval of lithified, ledge-forming, light-gray, laminated to cross laminated and cross bedded, moderately sorted to well sorted sandstone and slightly gravelly sandstone with minor granule conglomerate

MESOZOIC AND PRE-MESOZOIC CRYSTALLINE ROCKS NORTH OF BANNING FAULT (crystalline rocks of San Gabriel Mountains-type)

fcr — **Foliated crystalline rock (Mesozoic and older)**—Fine- to coarse-grained, foliated to gneissose granodiorite, tonalite, and quartz diorite that have a variety of non-penetrative and penetrative fabrics, including fractured, sheared, and crushed rock, brittle cataclastic fabrics (grain crushing and fracturing), and ductile mylonitic fabrics (milling, fluxion structure). Rock mainly biotitic and chloritic; hornblende subordinate to rare. Forms upper plate of region-wide Vincent Thrust of eastern San Gabriel Mountains

Mzd — **Diorite (Mesozoic)**—Medium- to coarse-grained, texturally massive to slightly foliated hornblende-biotite diorite and quartz diorite. Age and intrusive relations with unit Mzmg uncertain

MESOZOIC AND PRE-MESOZOIC CRYSTALLINE ROCKS SOUTH OF BANNING FAULT (crystalline rocks of Peninsular Ranges-type)

Kmeg — **Granitic rocks of Mt. Eden (Cretaceous)**—Very pale-brown, texturally massive to foliated, inequigranular to coarse-grained muscovite-garnet monzogranite; locally forms dike-like masses. Fresh rock is white, and has bright-pink garnets that impart distinctive appearance. Grain size ranges from fine to coarse, with grain size varying on a small scale. Forms unmapped dikes and sills in adjacent metasedimentary rock (unit ms)

Ktlc — **Tonalite of Lamb Canyon (Cretaceous)**—Equigranular to slightly foliated, medium- to coarse-grained biotite tonalite. Zircon from rock at the head of Lamb Canyon in the adjacent Beaumont quadrangle has Pb/U age of 94 Ma; sphene yields Pb/U age of 92.8 Ma (W. Premo, written commun. to D.M. Morton)

Khg — **Heterogeneous granitic rocks (Cretaceous)**—Heterogeneous mixture of granitic rocks containing abundant gneiss and schist. Granitic rocks range in composition from hornblende-rich tonalite to leucocratic tonalite and from potassium-feldspar free rocks to granodiorite

ms — **Metasedimentary rocks, undivided (?Mesozoic and older)**—Layered and foliated biotite-quartz gneiss associated with thin unmapped zones of white marble and metaquartzite; locally intermingled with unmapped dikes and sills of Granite of Mt. Eden (Kmeg)

m — **Marble (?Mesozoic and older)**—White to light gray, coarse-grained marble with minor pods of calc-silicate rock

APPENDIX

A

APPENDIX A
FIELD EXPLORATION

Fieldwork for our investigation (drilling) was conducted on February 9 and 10, 2021 and included a site visit, subsurface exploration, and soil sampling. The locations of the exploratory borings are shown on the Site Plan, Figure 2. Boring logs for our exploration are presented in figures following the text in this appendix. Borings were located in the field using existing reference points. Therefore, actual boring locations may deviate slightly.

In general, our borings were performed using a truck-mounted CME 45C drill rig equipped with 6½-inch diameter hollow stem augers. Sampling in the borings was accomplished using a hydraulic 140-pound hammer with a 30-inch drop. Samples were obtained with a 3-inch outside-diameter (OD), split spoon (California Modified) sampler, and a 2-inch OD, Standard Penetration Test (SPT) sampler. The number of blows required to drive the sampler the last 12 inches (or fraction thereof) of the 18-inch sampling interval were recorded on the boring logs. The blow counts shown on the boring logs should not be interpreted as standard SPT "N" values; corrections have not been applied. Upon completion, the borings were backfilled with soil cuttings.

Subsurface conditions encountered in the exploratory borings were visually examined, classified and logged in general accordance with the American Society for Testing and Materials (ASTM) Practice for Description and Identification of Soils (Visual-Manual Procedure D2488). This system uses the Unified Soil Classification System (USCS) for soil designations. The logs depict soil and geologic conditions encountered and depths at which samples were obtained. The logs also include our interpretation of the conditions between sampling intervals. Therefore, the logs contain both observed and interpreted data. We determined the lines designating the interface between soil materials on the logs using visual observations, drill rig penetration rates, excavation characteristics and other factors. The transition between materials may be abrupt or gradual. Where applicable, the field logs were revised based on subsequent laboratory testing.

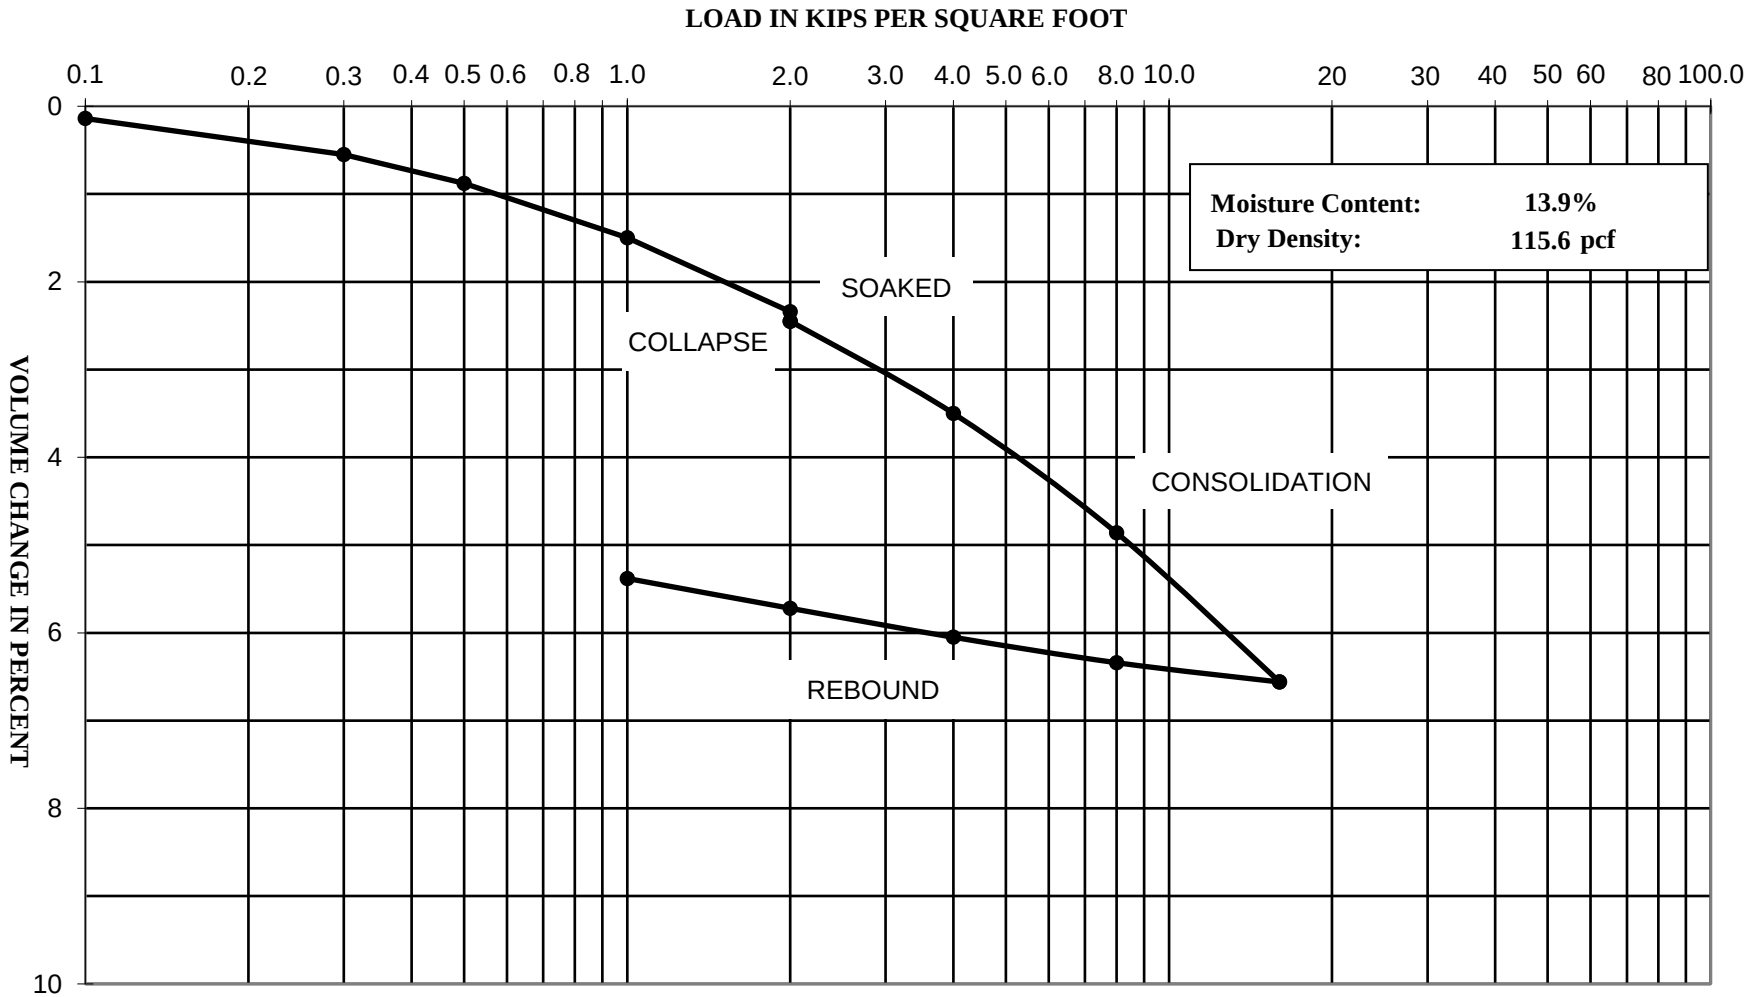
APPENDIX

B

APPENDIX B
LABORATORY TESTING

Laboratory tests were performed in accordance with generally accepted test methods of the American Society for Testing and Materials (ASTM), Caltrans, or other suggested procedures. Selected samples were tested for in-situ dry density and moisture content, corrosivity, consolidation, shear strength, expansion index, maximum density and optimum moisture content, and grain size distribution. The results of the laboratory tests are summarized in the following figures.

CONSOLIDATION - PRESSURE TEST DATA
ASTM D2435



Project Name: Proposed Fueling Station - Calimesa, CA

Project Number: 3-221-0096

Boring: B-1 @ 5'

SALEM engineering group, inc.

APPENDIX

C

APPENDIX C
GENERAL EARTHWORK AND PAVEMENT SPECIFICATIONS

When the text of the report conflicts with the general specifications in this appendix, the recommendations in the report have precedence.

1.0 SCOPE OF WORK: These specifications and applicable plans pertain to and include all earthwork associated with the site rough grading, including, but not limited to, the furnishing of all labor, tools and equipment necessary for site clearing and grubbing, stripping, preparation of foundation materials for receiving fill, excavation, processing, placement and compaction of fill and backfill materials to the lines and grades shown on the project grading plans and disposal of excess materials.

2.0 PERFORMANCE: The Contractor shall be responsible for the satisfactory completion of all earthwork in accordance with the project plans and specifications. This work shall be inspected and tested by a representative of SALEM Engineering Group, Incorporated, hereinafter referred to as the Soils Engineer and/or Testing Agency. Attainment of design grades, when achieved, shall be certified by the project Civil Engineer. Both the Soils Engineer and the Civil Engineer are the Owner's representatives. If the Contractor should fail to meet the technical or design requirements embodied in this document and on the applicable plans, he shall make the necessary adjustments until all work is deemed satisfactory as determined by both the Soils Engineer and the Civil Engineer. No deviation from these specifications shall be made except upon written approval of the Soils Engineer, Civil Engineer, or project Architect.

No earthwork shall be performed without the physical presence or approval of the Soils Engineer. The Contractor shall notify the Soils Engineer at least 2 working days prior to the commencement of any aspect of the site earthwork.

The Contractor shall assume sole and complete responsibility for job site conditions during the course of construction of this project, including safety of all persons and property; that this requirement shall apply continuously and not be limited to normal working hours; and that the Contractor shall defend, indemnify and hold the Owner and the Engineers harmless from any and all liability, real or alleged, in connection with the performance of work on this project, except for liability arising from the sole negligence of the Owner or the Engineers.

3.0 TECHNICAL REQUIREMENTS: All compacted materials shall be densified to no less that 95 percent of relative compaction (90 percent for fine grained, cohesive soils) based on ASTM D1557 Test Method (latest edition), UBC or CAL-216, or as specified in the technical portion of the Soil Engineer's report. The location and frequency of field density tests shall be determined by the Soils Engineer. The results of these tests and compliance with these specifications shall be the basis upon which satisfactory completion of work will be judged by the Soils Engineer.

4.0 SOILS AND FOUNDATION CONDITIONS: The Contractor is presumed to have visited the site and to have familiarized himself with existing site conditions and the contents of the data presented in the Geotechnical Engineering Report. The Contractor shall make his own interpretation of the data contained in the Geotechnical Engineering Report and the Contractor shall not be relieved of liability for any loss sustained as a result of any variance between conditions indicated by or deduced from said report and the actual conditions encountered during the progress of the work.

5.0 DUST CONTROL: The work includes dust control as required for the alleviation or prevention of any dust nuisance on or about the site or the borrow area, or off-site if caused by the Contractor's operation either during the performance of the earthwork or resulting from the conditions in which the Contractor leaves the site. The Contractor shall assume all liability, including court costs of codefendants, for all claims related to dust or wind-blown materials attributable to his work. Site preparation shall consist of site clearing and grubbing and preparation of foundation materials for receiving fill.

6.0 CLEARING AND GRUBBING: The Contractor shall accept the site in this present condition and shall demolish and/or remove from the area of designated project earthwork all structures, both surface and subsurface, trees, brush, roots, debris, organic matter and all other matter determined by the Soils Engineer to be deleterious. Such materials shall become the property of the Contractor and shall be removed from the site.

Tree root systems in proposed improvement areas should be removed to a minimum depth of 3 feet and to such an extent which would permit removal of all roots greater than 1 inch in diameter. Tree roots removed in parking areas may be limited to the upper 1½ feet of the ground surface. Backfill of tree root excavations is not permitted until all exposed surfaces have been inspected and the Soils Engineer is present for the proper control of backfill placement and compaction. Burning in areas which are to receive fill materials shall not be permitted.

7.0 SUBGRADE PREPARATION: Surfaces to receive Engineered Fill and/or building or slab loads shall be prepared as outlined above, scarified to a minimum of 12 inches, moisture-conditioned as necessary, and recompacted to 95 percent relative compaction (90 percent for cohesive soils).

Loose soil areas and/or areas of disturbed soil shall be moisture-conditioned as necessary and recompacted to 95 percent relative compaction (90 percent for cohesive soils). All ruts, hummocks, or other uneven surface features shall be removed by surface grading prior to placement of any fill materials. All areas which are to receive fill materials shall be approved by the Soils Engineer prior to the placement of any fill material.

8.0 EXCAVATION: All excavation shall be accomplished to the tolerance normally defined by the Civil Engineer as shown on the project grading plans. All over-excavation below the grades specified shall be backfilled at the Contractor's expense and shall be compacted in accordance with the applicable technical requirements.

9.0 FILL AND BACKFILL MATERIAL: No material shall be moved or compacted without the presence or approval of the Soils Engineer. Material from the required site excavation may be utilized for construction site fills, provided prior approval is given by the Soils Engineer. All materials utilized for constructing site fills shall be free from vegetation or other deleterious matter as determined by the Soils Engineer.

10.0 PLACEMENT, SPREADING AND COMPACTION: The placement and spreading of approved fill materials and the processing and compaction of approved fill and native materials shall be the responsibility of the Contractor. Compaction of fill materials by flooding, ponding, or jetting shall not be permitted unless specifically approved by local code, as well as the Soils Engineer. Both cut and fill shall be surface-compacted to the satisfaction of the Soils Engineer prior to final acceptance.

11.0 SEASONAL LIMITS: No fill material shall be placed, spread, or rolled while it is frozen or thawing, or during unfavorable wet weather conditions. When the work is interrupted by heavy rains, fill operations shall not be resumed until the Soils Engineer indicates that the moisture content and density of previously placed fill is as specified.

12.0 DEFINITIONS - The term "pavement" shall include asphaltic concrete surfacing, untreated aggregate base, and aggregate subbase. The term "subgrade" is that portion of the area on which surfacing, base, or subbase is to be placed.

The term "Standard Specifications": hereinafter referred to, is the most recent edition of the Standard Specifications of the State of California, Department of Transportation. The term "relative compaction" refers to the field density expressed as a percentage of the maximum laboratory density as determined by ASTM D1557 Test Method (latest edition) or California Test Method 216 (CAL-216), as applicable.

13.0 PREPARATION OF THE SUBGRADE - The Contractor shall prepare the surface of the various subgrades receiving subsequent pavement courses to the lines, grades, and dimensions given on the plans. The upper 12 inches of the soil subgrade beneath the pavement section shall be compacted to a minimum relative compaction of 95 percent based upon ASTM D1557. The finished subgrades shall be tested and approved by the Soils Engineer prior to the placement of additional pavement courses.

14.0 AGGREGATE BASE - The aggregate base material shall be spread and compacted on the prepared subgrade in conformity with the lines, grades, and dimensions shown on the plans. The aggregate base material shall conform to the requirements of Section 26 of the Standard Specifications for Class II material, ¾-inch or 1½-inches maximum size. The aggregate base material shall be compacted to a minimum relative compaction of 95 percent based upon CAL-216. The aggregate base material shall be spread in layers not exceeding 6 inches and each layer of aggregate material course shall be tested and approved by the Soils Engineer prior to the placement of successive layers.

15.0 AGGREGATE SUBBASE - The aggregate subbase shall be spread and compacted on the prepared subgrade in conformity with the lines, grades, and dimensions shown on the plans. The aggregate subbase material shall conform to the requirements of Section 25 of the Standard Specifications for Class II Subbase material. The aggregate subbase material shall be compacted to a minimum relative compaction of 95 percent based upon CAL-216, and it shall be spread and compacted in accordance with the Standard Specifications. Each layer of aggregate subbase shall be tested and approved by the Soils Engineer prior to the placement of successive layers.

16.0 ASPHALTIC CONCRETE SURFACING - Asphaltic concrete surfacing shall consist of a mixture of mineral aggregate and paving grade asphalt, mixed at a central mixing plant and spread and compacted on a prepared base in conformity with the lines, grades, and dimensions shown on the plans. The viscosity grade of the asphalt shall be PG 64-10, unless otherwise stipulated or local conditions warrant more stringent grade. The mineral aggregate shall be Type A or B, ½ inch maximum size, medium grading, and shall conform to the requirements set forth in Section 39 of the Standard Specifications. The drying, proportioning, and mixing of the materials shall conform to Section 39. The prime coat, spreading and compacting equipment, and spreading and compacting the mixture shall conform to the applicable chapters of Section 39, with the exception that no surface course shall be placed when the atmospheric temperature is below 50 degrees F. The surfacing shall be rolled with a combination steel-wheel and pneumatic rollers, as described in the Standard Specifications. The surface course shall be placed with an approved self-propelled mechanical spreading and finishing machine.

Attn: Sarah Siren

re: Paleontological resources for the Calimesa Sandalwood Travel Center Project

Dear Sarah:

I have conducted a thorough search of our paleontology collection records for the locality and specimen data for proposed development at the Calimesa Sandalwood Travel Center project area as outlined on the portion of the El Casco USGS topographic quadrangle map that you sent to me via e-mail on July 9, 2021. We do not have any fossil localities that lie directly within the proposed project area, but we do have fossil localities nearby from the same sedimentary deposits that occur in the proposed project area, either at the surface or at depth.

The following table shows the closest known localities in the collection of the Natural History Museum of Los Angeles County.

Locality Number	Location	Formation	Taxa	Depth
LACM VP 7618-7622	San Timoteo Badlands; E of Moreno & NW of Eden Hot Springs	San Timoteo Formation	Horse family (Equidae); Camel family (Camelidae)	Unknown
LACM VP 1715, 1107*	San Jacinto River; about 9 mi E of Hemet	Unknown formation (Pleistocene)	Horse (*Equus bautistensis*); other unspecified vertebrates	Unknown
LACM VP 4540	junction of Jackrabbit Trail & Gilman Springs Road	Unnamed Formation (Pleistocene, gravel pit)	Horse Family (Equidae)	Unknown
LACM VP 1269	Near intersection of Varner Road and Edom Hill Road; west end of Indio Hills	Unknown formation (Pleistocene)	Horse (*Equus*)	Unknown
LACM VP 1653, LACM IP 437	Saboba Indian Reservation; five miles east of San Jacint0	Unknown Formation (Pleistocene)	Monkfish (*Squatina*), Stickleback (*Gasterosteus*); Invertebrates – insect (*Sobobapteron kirkbaye*), brachiopod (*Terebratalia*	Unknown

			hemphili)	
VIP CIT 579	Palm Canyon, NE of Edom, Riverside Co.	Unknown formation (Pleistocene)	Bison (*Bison*)	Unknown

VP, Vertebrate Paleontology; IP, Invertebrate Paleontology; bgs, below ground surface
**as published in Frick; 1921; U.C. Publ. Geol. Sci. vol. 12; no. 5.*

This records search covers only the records of the Natural History Museum of Los Angeles County ("NHMLA"). It is not intended as a paleontological assessment of the project area for the purposes of CEQA or NEPA. Potentially fossil-bearing units are present in the project area, either at the surface or in the subsurface. As such, NHMLA recommends that a full paleontological assessment of the project area be conducted by a paleontologist meeting Bureau of Land Management or Society of Vertebrate Paleontology standards.

Sincerely,

Alyssa Bell, Ph.D.
Natural History Museum of Los Angeles County

APNs: 411-210-024 and 411-210-006
Calimesa, California 92320
Partner Project No. 21-306420.2

Dear Mandi Flores:

Partner Engineering and Science, Inc. (Partner) is pleased to provide the results of the *Phase I Environmental Site Assessment* (Phase I ESA) report of the abovementioned address (the "subject property"). This assessment was performed in conformance with the scope and limitations as detailed in the ASTM Practice E1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

This assessment included a site reconnaissance as well as research and interviews with representatives of the public, property ownership, site manager, and regulatory agencies. An assessment was made, conclusions stated, and recommendations outlined.

We appreciate the opportunity to provide environmental services to you. If you have any questions concerning this report, or if we can assist you in any other matter, please contact me at (310) 615-4500.

Sincerely,

Jenny Redlin
Relationship Manager

EXECUTIVE SUMMARY

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in accordance with the scope of work and limitations of ASTM Standard Practice E1527-13, the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) and set forth by Golden State Bank for the property located at APNs: 411-210-024 and 411-210-006 in Calimesa, Riverside County, California (the "subject property"). The Phase I Environmental Site Assessment is designed to provide Golden State Bank with an assessment concerning environmental conditions (limited to those issues identified in the report) as they exist at the subject property.

Property Description

The subject property is located east of 7th Street and west of Interstate 10, approximately 400 feet north of Sandalwood Drive within a mixed commercial and residential area of Riverside County. Please refer to the table below for further description of the subject property:

Subject Property Data	
Address(es):	APN: 411-210-024 and 411-210-006, Calimesa, California
Property Use:	Undeveloped land
Land Acreage (Ac):	9.56 Ac
Number of Buildings:	N/A
Assessor's Parcel Number (APN):	411-210-024 and 411-210-006
Site Assessment Performed By:	Tatjana McCondichie of Partner
Site Assessment Conducted On:	January 29, 2021

The subject property currently consists of 9.56-acres of undeveloped land. No onsite operations are currently conducted at the subject property.

According to available historical sources, the subject property has been undeveloped and/or agricultural land since at least 1938.

The immediately surrounding properties consist of rural residences to the north; a Jack in the Box Restaurant to the south; commercial development to the east across Interstate 10; and vacant land and a mobile home park to the west across 7th Street.

According to the Regional Water Quality Control Board (RWQCB), the depth to groundwater in the vicinity of the subject property is inferred to be at over 250 feet below ground surface (bgs) and groundwater flow is inferred to be toward the south.

Findings

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- Partner did not identify any RECs during the course of this assessment.

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- Partner did not identify any CRECs during the course of this assessment.

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- Partner did not identify any HRECs during the course of this assessment.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- The subject property was historically used for agricultural purposes. There is a potential that agricultural related chemicals such as pesticides, herbicides, and fertilizers, may have been used and stored onsite. During future site development activities, near surface soils (where residual agricultural chemical concentrations would have most likely been present, if at all) will generally be mixed with fill material or disturbed during grading. Also, it is common that engineered fill material is placed over underlying soils as part of the development activities. Furthermore, it is likely that residual agricultural chemicals (if any) would have likely degraded since the site was last utilized for agricultural purposes. These additional variables serve to further reduce the potential for exposure to residual agricultural chemicals (if any). Based on these reasons, Partner concludes that the possible former use of agricultural chemicals is not expected to represent a significant environmental concern at this time; however, if the subject property is planned for residential redevelopment, soil sampling related to agricultural use would be warranted.

Conclusions, Opinions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of APNs: 411-210-024 and 411-210-006 in Calimesa, Riverside County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed no evidence of RECs in connection with the subject property; however, an environmental issue was identified. Based on the conclusions of this assessment, Partner recommends no further investigation of the subject property at this time.

1.0 INTRODUCTION

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) for the property located at APNs: 411-210-024 and 411-210-006 in Calimesa, Riverside County, California (the "subject property"). Any exceptions to, or deletions from, this scope of work are described in the report.

1.1 Purpose

The purpose of this ESA is to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E1527-13) affecting the subject property that: 1) constitute or result in a material violation or a potential material violation of any applicable environmental law; 2) impose any material constraints on the operation of the subject property or require a material change in the use thereof; 3) require clean-up, remedial action or other response with respect to Hazardous Substances or Petroleum Products on or affecting the subject property under any applicable environmental law; 4) may affect the value of the subject property; and 5) may require specific actions to be performed with regard to such conditions and circumstances. The information contained in the ESA Report will be used by Client to: 1) evaluate its legal and financial liabilities for transactions related to foreclosure, purchase, sale, loan origination, loan workout or seller financing; 2) evaluate the subject property's overall development potential, the associated market value and the impact of applicable laws that restrict financial and other types of assistance for the future development of the subject property; and/or 3) determine whether specific actions are required to be performed prior to the foreclosure, purchase, sale, loan origination, loan workout or seller financing of the subject property.

This ESA was performed to permit the *User* to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "*landowner liability protections*," or "*LLPs*"). ASTM Standard E1527-13 constitutes "*all appropriate inquiry* into the previous ownership and uses of the *property* consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

1.2 Scope of Work

The scope of work for this ESA is in accordance with the requirements of ASTM Standard E1527-13. This assessment included: 1) a property and adjacent site reconnaissance; 2) interviews with key personnel; 3) a review of historical sources; 4) a review of regulatory agency records; and 5) a review of a regulatory database report provided by a third-party vendor. Partner contacted local agencies, such as environmental health departments, fire departments and building departments in order to determine any current and/or former hazardous substances usage, storage and/or releases of hazardous substances on the subject property. Additionally, Partner researched information on the presence of activity and use limitations (AULs) at these agencies. As defined by ASTM E1527-13, AULs are the legal or physical restrictions or limitations on the use of, or access to, a site or facility: 1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil or groundwater on the subject

property; or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls (IC/ECs), are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil or groundwater on the property.

If requested by Client, this report may also include the identification, discussion of, and/or limited sampling of asbestos-containing materials (ACMs), lead-based paint (LBP), mold, and/or radon.

1.3 Limitations

Partner warrants that the findings and conclusions contained herein were accomplished in accordance with the methodologies set forth in the Scope of Work. These methodologies are described as representing good commercial and customary practice for conducting an ESA of a property for the purpose of identifying recognized environmental conditions. There is a possibility that even with the proper application of these methodologies there may exist on the subject property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. Partner believes that the information obtained from the record review and the interviews concerning the subject property is reliable. However, Partner cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluations. The conclusions presented in the report are based solely on the services described therein, and not on scientific tasks or procedures beyond the scope of agreed-upon services or the time and budgeting restraints imposed by the Client. No other warranties are implied or expressed.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This report is subject to the limitations of historical documentation, availability, and accuracy of pertinent records, and the personal recollections of those persons contacted.

This practice does not address requirements of any state or local laws or of any federal laws other than the all appropriate inquiry provisions of the LLPs. Further, this report does not intend to address all of the safety concerns, if any, associated with the subject property.

Environmental concerns, which are beyond the scope of a Phase I ESA as defined by ASTM include the following: ACMs, LBP, radon, and lead in drinking water. These issues may affect environmental risk at the subject property and may warrant discussion and/or assessment; however, are considered non-scope issues. If specifically requested by the Client, these non-scope issues are discussed in Section 6.3.

1.4 User Reliance

Golden State Bank engaged Partner to perform this assessment in accordance with an agreement governing the nature, scope and purpose of the work as well as other matters critical to the engagement. All reports, both verbal and written, are for the sole use and benefit of Golden State Bank. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with Partner granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action

against Partner, its officers, employees, vendors, successors or assigns. Any such unauthorized user shall be responsible to protect, indemnify and hold Partner, Client and their respective officers, employees, vendors, successors and assigns harmless from any and all claims, damages, losses, liabilities, expenses (including reasonable attorneys' fees) and costs attributable to such Use. Unauthorized use of this report shall constitute acceptance of and commitment to these responsibilities, which shall be irrevocable and shall apply regardless of the cause of action or legal theory pled or asserted. Additional legal penalties may apply.

1.5 Limiting Conditions

The findings and conclusions contain all of the limitations inherent in these methodologies that are referred to in ASTM E1527-13.

Specific limitations and exceptions to this ESA are more specifically set forth below:

- Interviews with past or current owners, operators and occupants were not reasonably ascertainable and thus constitute a data gap. Based on information obtained from other historical sources (as discussed in Section 3.0), this data gap is not expected to alter the findings of this assessment.
- Partner requested information relative to deed restrictions and environmental liens, a title search, and completion of the AAI User Questionnaire from the Report User. This information was not provided at the time of the assessment. Based on information obtained from other historical sources (as discussed in Section 3.0), this data gap is not expected to alter the findings of this assessment.
- Partner submitted Freedom of Information Act (FOIA) requests to the Riverside County Environmental Health Department and the City of Calimesa for information pertaining to hazardous substances, underground storage tanks, releases, inspection records, etc. for the subject property and/or adjacent properties. As of this writing, these agencies have not responded to Partner's request. Based on information obtained from other historical sources, this limitation is not expected to alter the overall findings of this assessment.

2.0 SITE DESCRIPTION

2.1 Site Location and Legal Description

The subject property at APNs: 411-210-024 and 411-210-006 in Calimesa, California is located east of 7th Street and west of Interstate 10, approximately 400 feet north of Sandalwood Drive. According to the Riverside County Assessor, the subject property is legally described as APN numbers 411-210-024 and 411-210-006.

Please refer to Figure 1: Site Location Map, Figure 2: Site Plan, Figure 3: Topographic Map, and Appendix A: Site Photographs for the location and site characteristics of the subject property.

2.2 Current Property Use

The subject property currently consists of 9.56-acres of undeveloped land. No onsite operations are currently conducted at the subject property.

The subject property is designated for commercial use by the City of Calimesa.

The subject property was not identified in the regulatory database report of Section 4.2.

2.3 Current Use of Adjacent Properties

The subject property is located within a mixed commercial and residential area of Riverside County. During the vicinity reconnaissance, Partner observed the following land use on properties in the immediate vicinity of the subject property:

Immediately Surrounding Properties

North: Rural residences
South: Jack in the Box Restaurant (1199 7th Street)
East: Interstate 10 and commercial development
West: 7th Street followed by vacant land and a mobile home park

No adjacent properties were identified in the regulatory database report of Section 4.2.

2.4 Physical Setting Sources

2.4.1 Topography

The United States Geological Survey (USGS) *El Casco, California* Quadrangle 7.5-minute series topographic map was reviewed for this ESA. According to the contour lines on the topographic map, the subject property is located at approximately 2,371 feet above mean sea level (MSL). The contour lines in the area of the subject property indicate the area is sloping gently toward the south. The subject property is depicted on the 1996 map as vacant land.

A copy of the most recent topographic map is included as Figure 3 of this report.

2.4.2 Hydrology

According to topographic map interpretation, the direction of groundwater flow in the vicinity of the subject property is inferred to be toward the south. The nearest surface water in the vicinity of the subject property is an unnamed creek located west adjacent to the northern portion of the subject property. No

settling ponds, lagoons, surface impoundments, wetlands or natural catch basins were observed at the subject property during this assessment.

According to available information, a public water system operated by the Yucaipa Valley Water District serves the subject property vicinity. The sources of public water for Calimesa are rivers, lakes, and aqueducts, as well as underground aquifers.

According to a previous subsurface investigation conducted on a nearby property, the depth of groundwater in the vicinity of the subject property is inferred to be over 250 feet below ground surface (bgs).

2.4.3 Geology/Soils

The subject property is located in the upper Santa Ana Valley, which is roughly bounded by the San Gabriel Mountains to the north, the San Bernardino Mountains to the northeast, the Puente Hills and Chino Hills to the southwest and the San Jose Hills to the west. Also to the west, the upper Santa Ana Valley is contiguous with the eastern end of the San Gabriel Valley. Sediments in the area consist of silt, sand, and clay from near surface to at least 35 feet below grade.

Based on information obtained from the USDA Natural Resources Conservation Service Web Soil Survey online database, the subject property is mapped as Ramona very fine sandy loam and San Timoteo loam. The Ramona series is a member of the fine-loamy, mixed, thermic family of Typic Haploxeralfs. Typically, Ramona soils have brown, slightly and medium acid, sandy loam and fine sandy loam A horizons, reddish brown and yellowish red, slightly acid, sandy clay loam B2t horizons, and strong brown, neutral, fine sandy loam C horizons. The San Timoteo series consists of moderately deep, well to somewhat excessively drained soils formed in material weathered from shale, sandstone and calcified weathered granite. San Timoteo soils are on uplands and have slopes of 2 to 75 percent. The mean annual precipitation is about 16 inches and the mean annual temperature is about 63 degrees F.

2.4.4 Flood Zone Information

Partner performed a review of the Flood Insurance Rate Map, published by the Federal Emergency Management Agency. According to Community Panel Number 06065C0785G, dated August 8, 2008, the subject property appears to be located in Zone X, an area located outside of the 100-year and 500-year flood plains.

3.0 HISTORICAL INFORMATION

Partner obtained historical use information about the subject property from a variety of sources. A chronological listing of the historical data found is summarized in the table below:

Historical Use Information		
Period/Date	**Source**	**Description/Use**
1938-Present	Aerial Photographs, Interviews, Onsite Observations, Topographic Maps	Undeveloped and/or agricultural land

The subject property was historically used for agricultural purposes. There is a potential that agricultural related chemicals such as pesticides, herbicides, and fertilizers, may have been used and stored onsite. During future site development activities, near surface soils (where residual agricultural chemical concentrations would have most likely been present, if at all) will generally be mixed with fill material or disturbed during grading. Also, it is common that engineered fill material is placed over underlying soils as part of the development activities. Furthermore, it is likely that residual agricultural chemicals (if any) would have likely degraded since the site was last utilized for agricultural purposes. These additional variables serve to further reduce the potential for exposure to residual agricultural chemicals (if any). Based on these reasons, Partner concludes that the possible former use of agricultural chemicals is not expected to represent a significant environmental concern at this time; however, if the subject property is planned for residential redevelopment, soil sampling related to agricultural use would be warranted. No other potential environmental concerns were identified in association with the current or former use of the subject property.

3.1 Aerial Photograph Review

Partner obtained available aerial photographs of the subject property and surrounding area from Environmental Data Resources (EDR) on January 25, 2021. The following was observed on the subject property and adjacent properties during the aerial photograph review:

Date: 1938		***Scale: 1"=500'***
Subject Property:	Agricultural land	
North:	Agricultural land	
South:	Agricultural land	
East:	Agricultural land	
West:	Vacant land	

Date: 1949		***Scale: 1"=500'***
Subject Property:	No significant changes visible

East:	No significant changes visible
West:	No significant changes visible

Copies of select aerial photographs are included in Appendix B of this report.

3.2 Fire Insurance Maps

Partner reviewed the collection of Sanborn Fire insurance maps from Environmental Data Resources (EDR) January 25, 2021. Sanborn map coverage was not available for the subject property.

Copies of reviewed Sanborn Maps are included in Appendix B of this report.

3.3 City Directories

Partner reviewed historical city directories obtained from Environmental Data Resources (EDR) on January 29, 2021 for past names and businesses that were listed for the subject property and adjacent properties. The findings are presented in the following table:

City Directory Search for** APN: 411-210-024 and 411-210-006 **(Subject Property)

Year(s)	Occupant Listed
1971	No Listing
1974	No Listing
1980	No Listing
1992	No Listing
1995	No Listing
2000	No Listing
2005	No Listing
2010	No Listing
2014	No Listing
2017	No Listing

Based on the city directory review, no environmentally sensitive listings were identified for the subject property addresses.

City Directory Search for Adjacent Properties

Year(s)	Occupant Listed
1971	Residential Listings
1974	Residential Listings
1980	Residential Listings, Calimesa Wholesale Nursery (1100 7th Street)
1985	Residential Listings, Calimesa Wholesale Nursery (1100 7th Street)
1992	Residential Listing, Hollandia Farms (1100 7th Street)
1995	Residential Listings, Hollandia Farms (1100 7th Street)
2000	Residential Listing, Hollandia Farms (1100 7th Street)
2005	Residential Listings, Hollandia Farms (1100 7th Street), Jack in the Box (1199 7th Street)
2010	Residential Listings, Jack in the Box (1199 7th Street)
2014	Residential Listings, Jack in the Box (1199 7th Street)
2017	Residential Listings, Jack in the Box (1199 7th Street)

Based on the city directory review, no environmentally sensitive listings were identified for the adjacent property addresses.

Copies of reviewed city directories are included in Appendix B of this report.

3.4 Historical Topographic Maps

Partner reviewed historical topographic maps obtained from Environmental Data Resources (EDR) on January 25, 2021. The following was observed on the subject property and adjacent properties during the topographic map review:

Date: 1942

Subject Property: Depicted as vacant land
North: Depicted as occupied by a small structure
South: Depicted as vacant land
East: Depicted as vacant land
West: Depicted as vacant land

Date: 1943

Subject Property: No significant changes depicted
North: No significant changes depicted
South: No significant changes depicted
East: No significant changes depicted
West: No significant changes depicted

Date: 1953, 1954

Subject Property: No significant changes depicted
North: Depicted as occupied by a small structure
South: No significant changes depicted
East: No significant changes depicted
West: No significant changes depicted

Date: 1967

Subject Property: No significant changes depicted
North: No significant changes depicted
South: No significant changes depicted
East: Depicted as occupied by Interstate 10 followed by vacant land
West: Depicted as vacant land and a trailer park across a roadway

Date: 1979, 1980

Subject Property: No significant changes depicted
North: No significant changes depicted
South: No significant changes depicted
East: No significant changes depicted
West: No significant changes depicted

Date: 1996

Subject Property:	No significant changes depicted
North:	No significant changes depicted
South:	No significant changes depicted
East:	No significant changes depicted
West:	No significant changes depicted

Copies of reviewed topographic maps are included in Appendix B of this report.

4.0 REGULATORY RECORDS REVIEW

4.1 Regulatory Agencies

4.1.1 State Department

Regulatory Agency Data	
Name of Agency:	California Department of Toxic Substances Control (DTSC)
Point of Contact:	N/A
Agency Address:	5796 Corporate Avenue, Cypress, California
Agency Phone Number:	(714) 484-5300
Date of Contact:	January 27, 2021
Method of Communication:	Online
Summary of Communication:	No records regarding a release or the presence of AULs on the subject property were on file with the DTSC.

4.1.2 Health Department

Regulatory Agency Data	
Name of Agency:	Riverside County Department of Environmental Health (RCDEH)
Point of Contact:	NA
Agency Address:	4065 County Circle Drive-Room 104, Riverside, California
Agency Phone Number:	(951) 358-5055
Date of Contact:	January 27, 2021
Method of Communication:	Faxed Request
Summary of Communication:	As of the date of this report, Partner has not received a response from the RCEHD for inclusion in this report.

4.1.3 Air Pollution Control Agency

Regulatory Agency Data	
Name of Agency:	Air Quality Management District (AQMD)
Point of Contact:	N/A
Agency Address:	21865 Copley Dr, Diamond Bar, California
Agency Phone Number:	(909) 396-2000
Date of Contact:	January 27, 2021
Method of Communication:	Online
Summary of Communication:	No records for the subject property were identified in AQMD online records.

4.1.4 Regional Water Quality Agency

Regulatory Agency Data	
Name of Agency:	Regional Water Quality Control Board (RWQCB)
Point of Contact:	Laura Gallardo
Agency Address:	320 W. 4th St, Los Angeles, California
Agency Phone Number:	(213) 576-6600
Date of Contact:	January 27, 2021
Method of Communication:	Online
Summary of Communication:	No records for the subject property were identified in RWQCB online records.

4.1.5 Building Department

Regulatory Agency Data	
Name of Agency:	City of Calimesa Building and Safety Department
Point of Contact:	Records Clerk
Agency Address:	908 Park Avenue, Calimesa, CA 92320
Agency Phone Number:	(909) 795-9801
Date of Contact:	January 27, 2021
Method of Communication:	Telephone
Summary of Communication:	As of the date of this report, Partner has not received a response from the CBD for inclusion in this report.

A copy of pertinent documents is included in Appendix B of this report.

4.1.6 Planning Department

Regulatory Agency Data	
Name of Agency:	City of Calimesa Building and Safety Department
Point of Contact:	Records Clerk
Agency Address:	908 Park Avenue, Calimesa, CA 92320
Agency Phone Number:	(909) 795-9801
Date of Contact:	January 27, 2021
Method of Communication:	Online
Summary of Communication:	According to records reviewed, the subject property is zoned for commercial use.

4.1.7 Oil & Gas Exploration

Regulatory Agency Data	
Name of Agency:	California Division of Oil, Gas and Geothermal Resources (DOGGR)
Point of Contact:	N/A
Agency Address:	801 K Street, Sacramento, California
Agency Phone Number:	(916) 322-1080
Date of Contact:	January 27, 2021
Method of Communication:	Online
Summary of Communication:	According to DOGGR, no oil or gas wells are located on or adjacent to the subject property.

4.1.8 Assessor's Office

Regulatory Agency Data	
Name of Agency:	Riverside County Assessor (RCA)
Point of Contact:	N/A
Agency Address:	2720 Gateway Drive, Riverside, California
Agency Phone Number:	(951) 955-6200
Date of Contact:	January 27, 2021
Method of Communication:	Online
Summary of Communication:	According to assessor records, the subject property consists of two parcels of land (APN 411-210-024 and 411-210-006) that comprise 9.56 acres of land. No records regarding property ownership, building size, and utility information for the subject property was

Regulatory Agency Data

available from the Riverside County Assessor's Office.

4.2 Mapped Database Records Search

Information from standard federal, state, county, and city environmental record sources was provided by Environmental Data Resources, Inc. (EDR). Data from governmental agency lists are updated and integrated into one database, which is updated as these data are released. The information contained in this report was compiled from publicly available sources and the locations of the sites are plotted utilizing a geographic information system, which geocodes the site addresses. The accuracy of the geocoded locations is approximately +/-300 feet.

Using the ASTM definition of migration, Partner considers the migration of hazardous substances or petroleum products in any form onto the subject property during the evaluation of each site listed on the radius report, which includes solid, liquid, and vapor.

4.2.1 Regulatory Database Summary

Radius Report Data

Database	Search Radius (mile)	Subject Property	Adjacent Properties	Sites of Concern
Federal NPL or Delisted NPL Site	1.00	N	N	N
Federal CERCLIS Site	0.50	N	N	N
Federal CERCLIS-NFRAP Site	0.50	N	N	N
Federal RCRA CORRACTS Facility	1.00	N	N	N
Federal RCRA TSDF Facility	0.50	N	N	N
Federal RCRA Generators Site (LQG, SQG, CESQG)	0.25	N	N	N
Federal IC/EC Registries	0.50	N	N	N
Federal ERNS Site	Subject Property	N	N	N
State/Tribal Equivalent NPL	1.00	N	N	N
State/Tribal Equivalent CERCLIS	1.00	N	N	N
State/Tribal Landfill/Solid Waste Disposal Site	0.50	N	N	N
State/Tribal Leaking Storage Tank Site	0.50	N	N	Y
State/Tribal Registered Storage Tank Sites (UST/AST)	0.25	N	N	N
State/Tribal Voluntary Cleanup Sites (VCP)	0.50	N	N	N
State/Tribal Spills	0.50	N	N	N
Federal Brownfield Sites	0.50	N	N	N
State Brownfield Sites	0.50	N	N	N
EDR MGP	Varies	N	N	N
EDR US Hist Auto Station	Varies	N	N	N
EDR US Hist Cleaners	Varies	N	N	N

4.2.2 Subject Property Listings

The subject property is not identified in the regulatory database report.

4.2.3 Adjacent Property Listings

The adjacent properties are not identified in the regulatory database report.

Based on the findings, vapor migration is not expected to represent a significant environmental concern at this time.

4.2.4 Sites of Concern Listings

No sites of concern are identified in the regulatory database report. Based on various mitigating factors including relative distance from the subject property, inferred direction of groundwater flow, media affected, and/or regulatory status, the remaining listed sites within the specified search radius of the subject property which appeared on local, State, or Federally published lists of sites that have had releases of hazardous substances, are not expected to represent a significant environmental concern. Based on the findings, vapor migration from the surrounding properties is not expected to represent a significant environmental concern at this time.

4.2.5 Orphan Listings

No orphan listings of concern are identified in the regulatory database report.

A copy of the regulatory database report is included in Appendix C of this report.

5.0 USER PROVIDED INFORMATION AND INTERVIEWS

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the *Brownfields Amendments*), the *User* must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. The *User* should provide the following information to the *environmental professional*. Failure to provide this information could result in a determination that *all appropriate inquiries* is not complete. The *User* is asked to provide information or knowledge of the following:

- Review Title and Judicial Records for Environmental Liens and AULs
- Specialized Knowledge or Experience of the User
- Actual Knowledge of the User
- Reason for Significantly Lower Purchase Price
- Commonly Known or *Reasonably Ascertainable* information
- Degree of Obviousness
- Reason for Preparation of this Phase I ESA

Fulfillment of these user responsibilities is key to qualification for the identified defenses to CERCLA liability. Partner requested our Client to provide information to satisfy User Responsibilities as identified in Section 6 of the ASTM guidance.

Pursuant to ASTM E1527-13, Partner requested the following site information from Golden State Bank (User of this report).

User Responsibilities				
Item	**Provided By User**	**Not Provided By User**	**Discussed Below**	**Does Not Apply**
AAI User Questionnaire			**X**	
Title Records, Environmental Liens, and AULs			**X**	
Specialized Knowledge			**X**	
Actual Knowledge			**X**	
Valuation Reduction for Environmental Issues			**X**	
Identification of Key Site Manager	**Section 5.1.3**			
Reason for Performing Phase I ESA	**Section 1.1**			
Prior Environmental Reports		**X**		
Other		**X**		

5.1 Interviews

5.1.1 Interview with Owner

The owner of the subject property was not available to be interviewed at the time of the assessment.

5.1.2 Interview with Report User

Please refer to Section 5.2 below for information requested from the Report User. The information requested was not received prior to the issuance of this report. Because the Report User (Client) is a lender, it is understood that the Report User would not have knowledge of the property that would significantly impact our ability to satisfy the objectives of this assessment. The lack of this information is not considered to represent a significant data gap.

5.1.3 Interview with Key Site Manager

Ms. Ofelia Ahumada with JNT Management, key site manager, indicated that she had no information pertaining to any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property; any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property; or any notices from a governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

5.1.4 Interviews with Past Owners, Operators and Occupants

Interviews with past owners, operators and occupants were not conducted since information regarding the potential for contamination at the subject property was obtained from other sources.

5.1.5 Interview with Others

As the subject property is not an abandoned property as defined in ASTM 1527-13, interview with others were not performed.

5.2 User Provided Information

5.2.1 Title Records, Environmental Liens, and AULs

Partner was not provided with title records or environmental lien and AUL information for review as part of this assessment.

5.2.2 Specialized Knowledge

The User did not have specialized knowledge of environmental conditions associated with the subject property at the time of the assessment.

5.2.3 Actual Knowledge of the User

The User was not aware of environmental liens and/or AULs encumbering the subject property or in connection with the subject property at the time of the assessment.

5.2.4 Valuation Reduction for Environmental Issues

The User was not aware of any reductions in property value due to environmental issues.

5.2.5 Commonly Known or Reasonably Ascertainable Information

The User did not provide information that is commonly known or *reasonably ascertainable* within the local community about the subject property at the time of the assessment.

5.2.6 Previous Reports and Other Provided Documentation

No previous reports or other pertinent documentation was provided to Partner for review during the course of this assessment.

6.0 SITE RECONNAISSANCE

The weather at the time of the site visit was overcast. Refer to Section 1.5 for limitations encountered during the field reconnaissance and Sections 2.1 and 2.2 for subject property operations. The table below provides the site assessment details:

Site Assessment Data	
Site Assessment Performed By:	Tatjana McCondichie
Site Assessment Conducted On:	January 29, 2021

Partner was unaccompanied during the site visit.

No potential environmental concerns were identified during the onsite reconnaissance.

6.1 General Site Characteristics

6.1.1 Solid Waste Disposal

As the subject property is vacant land, solid waste is not currently generated onsite. No evidence of illegal dumping of solid waste was observed during the Partner site reconnaissance.

6.1.2 Sewage Discharge and Disposal

As the subject property is vacant land, no sanitary discharges are currently generated onsite.

6.1.3 Surface Water Drainage

Storm water is removed from the subject property primarily by percolation into the uncapped ground surface.

The subject property does not appear to be a designated wetland area, based on information obtained from the United States Department of Agriculture; however, a comprehensive wetlands survey would be required in order to formally determine actual wetlands on the subject property. No surface impoundments, wetlands, natural catch basins, settling ponds, or lagoons are located on the subject property. No drywells were identified on the subject property.

6.1.4 Source of Heating and Cooling

As the subject property is vacant land, heating and cooling systems were not observed onsite. However, natural gas and electricity in the surrounding area is provided by Southern California Gas Company and the Southern California Edison, respectively.

6.1.5 Wells and Cisterns

No aboveground evidence of wells or cisterns was observed during the site reconnaissance.

6.1.6 Wastewater

As the subject property is vacant land, domestic wastewater is not currently generated at the subject property.

6.1.7 Septic Systems

No septic systems were observed or reported on the subject property.

6.1.8 Additional Site Observations

No additional general site characteristics were observed during the site reconnaissance.

6.2 Potential Environmental Hazards

6.2.1 Hazardous Substances and Petroleum Products Used or Stored at the Site

No hazardous substances or petroleum products were observed on the subject property during the site reconnaissance.

6.2.2 Aboveground & Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)

No evidence of current or former ASTs or USTs was observed during the site reconnaissance.

6.2.3 Evidence of Releases

No spills, stains or other indications that a surficial release has occurred at the subject property were observed.

6.2.4 Polychlorinated Biphenyls (PCBs)

No potential PCB-containing equipment (transformers, oil-filled switches, hoists, lifts, dock levelers, hydraulic elevators, etc) was observed on the subject property during Partner's reconnaissance.

6.2.5 Strong, Pungent or Noxious Odors

No strong, pungent or noxious odors were evident during the site reconnaissance.

6.2.6 Pools of Liquid

No pools of liquid were observed on the subject property during the site reconnaissance.

6.2.7 Drains, Sumps and Clarifiers

What appeared to be a storm drain was observed on the northwest corner of the subject property. No staining indicative of dumping was observed around the drain.

No sumps or clarifiers were observed on the subject property during the site reconnaissance.

6.2.8 Pits, Ponds and Lagoons

No pits, ponds or lagoons were observed on the subject property.

6.2.9 Stressed Vegetation

No stressed vegetation was observed on the subject property.

6.2.10 Additional Potential Environmental Hazards

No additional environmental hazards, including landfill activities or radiological hazards, were observed.

6.3 Non-ASTM Services

6.3.1 Asbestos-Containing Materials (ACMs)

Due to the absence of structures on the subject property, ACMs were not considered within the scope of this assessment.

6.3.2 Lead-Based Paint (LBP)

Due to the absence of structures on the subject property, LBP was not considered within the scope of this assessment.

6.3.3 Radon

Radon is a colorless, odorless, naturally occurring, radioactive, inert, gaseous element formed by radioactive decay of radium (Ra) atoms. The US EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three Radon Zones, according to the table below:

EPA Radon Zones		
EPA Zones	**Average Predicted Radon Levels**	**Potential**
Zone 1	Exceed 4.0 pCi/L	Highest
Zone 2	Between 2.0 and 4.0 pCi/L	Moderate
Zone 3	Less than 2.0 pCi/L	Low

It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the US EPA recommends site-specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not conducted as part of this assessment. Review of the US EPA Map of Radon Zones places the subject property in Zone 2. Based upon the radon zone classification, radon is not considered to be a significant environmental concern.

6.3.4 Lead in Drinking Water

According to available information, a public water system operated by the Yucaipa Valley Water District serves the subject property vicinity. The sources of public water for Calimesa are rivers, lakes, and aqueducts, as well as underground aquifers. Water sampling was not conducted to verify water quality.

6.3.5 Mold

Due to the absence of structures on the subject property, a mold assessment was not conducted.

6.4 Adjacent Property Reconnaissance

The adjacent property reconnaissance consisted of observing the adjacent properties from the subject property premises. No items of environmental concern were identified on the adjacent properties during the site assessment, including hazardous substances, petroleum products, ASTs, USTs, evidence of releases, PCBs, strong or noxious odors, pools of liquids, sumps or clarifiers, pits or lagoons, stressed vegetation, or any other potential environmental hazards.

7.0 FINDINGS AND CONCLUSIONS

Findings

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- Partner did not identify any RECs during the course of this assessment.

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- Partner did not identify any CRECs during the course of this assessment.

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- Partner did not identify any HRECs during the course of this assessment.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- The subject property was historically used for agricultural purposes. There is a potential that agricultural related chemicals such as pesticides, herbicides, and fertilizers, may have been used and stored onsite. During future site development activities, near surface soils (where residual agricultural chemical concentrations would have most likely been present, if at all) will generally be mixed with fill material or disturbed during grading. Also, it is common that engineered fill material is placed over underlying soils as part of the development activities. Furthermore, it is likely that residual agricultural chemicals (if any) would have likely degraded since the site was last utilized for agricultural purposes. These additional variables serve to further reduce the potential for exposure to residual agricultural chemicals (if any). Based on these reasons, Partner concludes that the possible former use of agricultural chemicals is not expected to represent a significant environmental concern at this time; however, if the subject property is planned for residential redevelopment, soil sampling related to agricultural use would be warranted.

Conclusions, Opinions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of APN: 411-210-024 and 411-210-006 in Calimesa, Riverside

County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed no evidence of RECs in connection with the subject property; however, an environmental issue was identified. Based on the conclusions of this assessment, Partner recommends no further investigation of the subject property at this time.

8.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

Partner has performed a Phase I Environmental Site Assessment of the property located at APNs: 411-210-024 and 411-210-006 in Calimesa, Riverside County, California in conformance with the scope and limitations of the protocol and the limitations stated earlier in this report. Exceptions to or deletions from this protocol are discussed earlier in this report.

By signing below, Partner declares that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR §312. Partner has the specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the subject *property*. Partner has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Partner Engineering and Science, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

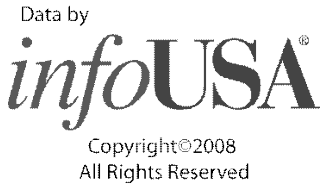
EXECUTIVE SUMMARY



DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Feet 1:6,000

0 250 500 1,000 1,500 2,000

Basemap: USGS National Map: Orthoimagery: Data refreshed October, 2020

Legend

SEE FIS REPORT FOR DETAILED LEGEND AND INDEX MAP FOR FIRM PANEL LAYOUT

SPECIAL FLOOD HAZARD AREAS
- Without Base Flood Elevation (BFE) *Zone A, V, A99*
- With BFE or Depth *Zone AE, AO, AH, VE, AR*
- Regulatory Floodway

OTHER AREAS OF FLOOD HAZARD
- 0.2% Annual Chance Flood Hazard, Areas of 1% annual chance flood with average depth less than one foot or with drainage areas of less than one square mile *Zone X*
- Future Conditions 1% Annual Chance Flood Hazard *Zone X*
- Area with Reduced Flood Risk due to Levee. See Notes. *Zone X*
- Area with Flood Risk due to Levee *Zone D*

OTHER AREAS
- NO SCREEN Area of Minimal Flood Hazard *Zone X*
- Effective LOMRs
- Area of Undetermined Flood Hazard *Zone D*

GENERAL STRUCTURES
- Channel, Culvert, or Storm Sewer
- Levee, Dike, or Floodwall

OTHER FEATURES
- 20.2 Cross Sections with 1% Annual Chance
- 17.5 Water Surface Elevation
- Coastal Transect
- Base Flood Elevation Line (BFE)
- Limit of Study
- Jurisdiction Boundary
- Coastal Transect Baseline
- Profile Baseline
- Hydrographic Feature

MAP PANELS
- Digital Data Available
- No Digital Data Available
- Unmapped

N

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 2/2/2021 at 9:33 AM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

THIS MAP WAS PREPARED FOR ASSESSMENT PURPOSES ONLY. NO LIABILITY IS ASSUMED FOR THE ACCURACY OF THE DATA SHOWN. ASSESSOR'S PARCEL MAY NOT COMPLY WITH LOCAL LOT-SPLIT OR BUILDING SITE ORDINANCES.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/14/2020 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
VILLA CALIMESA MOBIL	1134 VILLA CALIMESA	W 1/8 - 1/4 (0.176 mi.)	E29	209

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 12/14/2020 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to,

identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/26/2020 has revealed that there is 1 ENVIROSTOR site within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 8 LUST sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 3 UST sites within approximately 0.25 miles of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 3 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/14/2020 has revealed that there are 12 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Hazardous Waste Summary:
Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: D007
Waste Description: CHROMIUM

Waste Code: D009
Waste Description: MERCURY

Waste Code: D010
Waste Description: SELENIUM

Waste Code: D024

WALGREENS #10366 (Continued) **1016954575**

Waste Description: M-CRESOL

Waste Code: P001
Waste Description: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3% (OR) WARFARIN, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%

Waste Code: P075
Waste Description: NICOTINE, & SALTS (OR) PYRIDINE, 3-(1-METHYL-2-PYRROLIDINYL)-,(S)-, & SALTS

Waste Code: U034
Waste Description: ACETALDEHYDE, TRICHLORO- (OR) CHLORAL

Waste Code: U165
Waste Description: NAPHTHALENE

Geo Track:	http://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T10000001842
Global Id:	T10000001842
Latitude:	33.993451
Longitude:	-117.057683
Status:	Completed - Case Closed
Status Date:	06/30/2017
Case Worker:	SCB
RB Case Number:	Not reported
Local Agency:	RIVERSIDE COUNTY LOP
File Location:	Local Agency
Local Case Number:	201032797
Potential Media Affect:	Soil
Potential Contaminants of Concern:	Gasoline
Site History:	Soil samples were taken December 22, 2009 during tank and piping removal activities. Up to 29 ppm TPHg, 990 ppb 1,2,4-TMB, 280 ppb 1,3,5-TMB, 770 ppb benzene, 410 ppb ethylbenzene, 2640 ppb total xylenes, 2200 ppb toluene, and 86000 ppb ethanol was detected under the piping. A total of 10.65 tons of impacted soil was removed from the site on March 11, 2010 in the vicinity of PD2-2. Soil samples taken at the bottom of the excavation at 7 had 1930 ppm TPHg, 29.2 ppm benzene, 503 ppm toluene, 721 ppm xylenes, 2.89 ppm MTBE, 19.1

ARCO CALIMESA #1958 (Continued) **S100178801**

ppm naphthalene, 260 ppm 1,2,4-TMB, 84.6 ppm 1,3,5-TMB, 22.4 ppm n-butylbenzene, 13.6 ppm isopropylbenzene, 5.2 ppm sec-butylbenzene and 6.3 ppm 4-isopropyltoluene. The pit was excavated deeper and soil samples were taken from the bottom at 10.5. Sample results showed 0.134 ppm TPHg, 0.075 ppm benzene, 0.659 ppm toluene, 9.06 ppm xylenes, 0.336 ppm MTBE, 3.69 ppm naphthalene, 11.1 ppm 1,2,4-TMB, 3.2 ppm 1,3,5-TMB, 1.89 ppm n-butylbenzene, 0.232 ppm isopropylbenzene, 0.23 ppm sec-butylbenzene and 0.32 ppm 4-isopropyltoluene Five soil borings (FB1 through FB5) were drilled to 54 to 61.5 feet bg surrounding the excavation pit at PD2-2 on June 2 to 4, 2015. Soil samples were taken at 2.5 feet and 5 feet and every 5 foot after to depth. FB1 was drilled next to SS-S-2 had 0.013 ppm xylenes at 2.5 feet bg; 1.5 ppm TPHg, 0.0066 ppm ethylbenzene, and 0.017 ppm xylenes at 5 feet bg; and 16 ppm TPHg, 28 ppm TPHd, 0.0052 ppm toluene, 0.026 ppm ethylbenzene, and 0.25 ppm xylenes at 10 feet bg. FB2 was drilled 10 feet northeast of the excavation and did not have any detectable hydrocarbons. FB3 was drilled 10 feet southeast of the excavation and had 2.3 ppm TPHg, 0.0079 ppm ethylbenzene, and 0.014 ppm at 5 feet bg. FB4 was drilled 10 feet southwest of the excavation and had 7.5 ppm TPHg, 18 ppm TPHg, 0.056 ppm ethylbenzene and 0.3 ppm xylenes at 5 feet bg. FB5 was drilled 10 feet northwest of the excavation and had 6.8 ppm THg, 15 ppm TPHd, 0.066 ppm toluene, 0.15 ppm ethylbenzene, and 0.65 ppm xylenes at 5 feet bg; and 12 ppm, 31 ppm TPHd, 0.055 ppm toluene, 0.21 ppm ethylbenzene, and 0.78 ppm xylenes at 10 feet bg. Vapor extraction wells (FB4/VE1 and FB5/VE2) were installed in FB4 and FB5. VE4 was screened from 10 to 20 feet and VE5 was screened from 5 to 20 and 30 to 45 feet. Impacted soil remains in sidewall (SS-S-2) and in the bottom of the excavation at 10.5 ft (SS-1-10.5), however, boring FB1 was drilled at the excavation sidewall where SS-S-2 was collected and soil samples from 2.5 ft and 5 ft were at or below the detection limits, indicating detections at SS-S-2 were very limited. Further, FB1 was within 5-ft of SS-1-10.5, also indicating detections in the bottom of the former excavation were very limited.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

Violation Source:	CERS

SHELL #1213 (Continued) **S104791922**

Site ID: 15729
Site Name: Calimesa Shell Station
Violation Date: 11-08-2019
Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,- 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes: Returned to compliance on 12/09/2019.
Violation Division: Riverside County Department of Env Health
Violation Program: UST
Violation Source: CERS

Site ID: 15729
Site Name: Calimesa Shell Station
Violation Date: 03-25-2019
Citation: 23 CCR 16 2712(b) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)
Violation Description: Failure to maintain records of repairs and upgrades on site, or off site if approved by the UPA, for the life of the UST.
Violation Notes: Returned to compliance on 05/23/2019. OBSERVATION: Observed that facility has completed a "Cold start" of the monitoring panel and was unable to locate work order documents. Facility upgraded the dispensers on site and had to conduct a "Cold start" of the monitoring panel. CORRECTIVE ACTION: Owner/operator shall provide all maintenance, monitoring, repair and/or upgrade records. Maintain copies on site and available for review. SUbmit missing documentation to the CUPA.

SHELL #1213 (Continued) **S104791922**

16, Section(s) 2712(i)
Violation Description: Failure to have a UST Response Plan available on site.
Violation Notes: Returned to compliance on 09/13/2017.
Violation Division: Riverside County Department of Env Health
Violation Program: UST
Violation Source: CERS

Site ID: 15729
Site Name: Calimesa Shell Station
Violation Date: 03-25-2019
Citation: HSC 6.7 25284, 25286 - California Health and Safety Code, Chapter 6.7, Section(s) 25284, 25286
Violation Description: Failure to submit a complete and accurate application for a permit to operate a UST, or for renewal of the permit.
Violation Notes: Returned to compliance on 05/23/2019. OBSERVATION: Observed UST tank information pages submitted in CERS to be inaccurate and/or missing information. The tank information page indicates a "No" for striker plates in all three tanks and a "yes" for ball floats as overfill prevention. Tanks were installed in 2003 therefore required to have striker plates and system does not required ball floats as overfill prevention as all piping is double walled on site. CORRECTIVE ACTION: Owner/operator shall make the corrections noted above to the UST tank information pages and re-submit updated forms in CERS.

Violation Description:	Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,- 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes:	Returned to compliance on 03/25/2019. OBSERVATION: An overfill

SHELL #1213 (Continued) **S104791922**

equipment inspection was not completed by the October 13, 2018 deadline. CORRECTIVE ACTION: Owner/operator shall immediately schedule and complete an overfill equipment inspection providing the required 48 hour notification prior to conducting the inspection. Inspection results and all supporting documentation (inspection procedures used, tank charts, printouts, etc.) must be submitted to this Department within 30 days upon completion of the inspection. Overfill inspection conducted today. Violation corrected on site.

Site Name: Calimesa Shell Station
Violation Date: 03-27-2014
Citation: HSC 6.95 Multiple - California Health and Safety Code, Chapter 6.95, Section(s) Multiple
Violation Description: Business Plan Program - Administration/Documentation - General
Violation Notes: Returned to compliance on 04/06/2016.
Violation Division: Riverside County Department of Env Health
Violation Program: HMRRP
Violation Source: CERS

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 03-25-2019
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Note: Facility had to conduct a cold start last year due to upgrade of dispensers on site. Owner/operator shall ensure this department is notified of any future cold starts that occur and have a non-witnessed monitoring certification performed to ensure sensor functionality. Failure to notify this department of a cold start may result in enforcement action. Note: On the DO reports, if there not any alarms in the last month, the designated operator should mark "N/A" for alarms being properly responded to on page 2 of the inspection report.

Site ID:	97154
Site Name:	Baker's Drive Thru #153
Violation Date:	12-26-2018
Citation:	HSC 6.95 25508(a)(3) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(3)
Violation Description:	Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes:	Returned to compliance on 01/23/2019. OBSERVATION: The chemical inventory description page submitted for Carbon Dioxide contained incorrect information. The inventory page needs to utilize the new Federal Hazard Categories. CORRECTIVE ACTION: Owner/operator shall update the chemical inventory page for Carbon Dioxide and submit to the statewide information management system at http://cers.calepa.ca.gov. Missing information may be found by looking at Section 2 [Hazard Identification] of the associated chemical safety data sheet.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/28/2020

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/28/2020

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 04/03/2019

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 10/28/2020

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/14/2020
Date Data Arrived at EDR: 12/17/2020
Date Made Active in Reports: 12/22/2020
Number of Days to Update: 5

Data Release Frequency: Quarterly

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 12/14/2020
Date Data Arrived at EDR: 12/17/2020
Date Made Active in Reports: 12/22/2020

Data Release Frequency: Quarterly

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/14/2020

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 10/28/2020
Date Data Arrived at EDR: 11/05/2020
Date Made Active in Reports: 11/18/2020
Number of Days to Update: 13

Source: Environmental Protection Agency
Telephone: 703-603-0695
Last EDR Contact: 11/05/2020
Next Scheduled EDR Contact: 03/08/2021
Data Release Frequency: Varies

US INST CONTROLS: Institutional Controls Sites List

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 10/28/2020

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.
