The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)
The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

Date of Government Version: 12/31/2019

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners
EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

North Map:	5630639 YUCAIPA, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

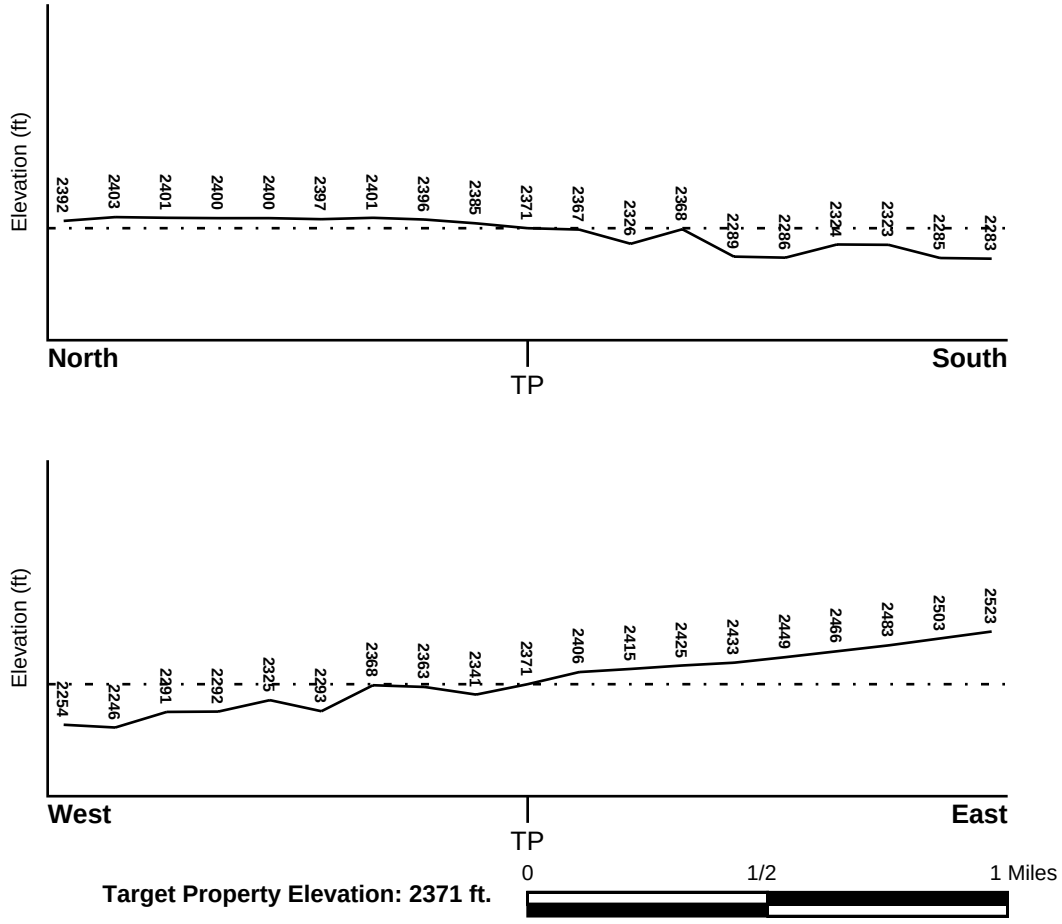
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06065C0785G	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06071C8740H	FEMA FIRM Flood data
06065C0118G	FEMA FIRM Flood data
0607400000A	FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
NOT AVAILABLE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
H36	1/2 - 1 Mile North	Not Reported
1G	1/2 - 1 Mile North	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: SAN TIMOTEO

Soil Surface Texture: loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: 4 Min: 1.4	Max: Min:
2	9 inches	22 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: 4 Min: 1.4	Max: Min:
3	22 inches	27 inches	weathered bedrock	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: 4 Min: 1.4	Max: Min:

Soil Map ID: 2

Soil Component Name: RAMONA

Soil Surface Texture: very fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	14 inches	very fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 4 Min: 1.4	Max: 8.4 Min: 6.6
2	14 inches	22 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 4 Min: 1.4	Max: 8.4 Min: 6.6
3	22 inches	68 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 4 Min: 1.4	Max: 8.4 Min: 6.6
4	68 inches	74 inches	gravelly sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 4 Min: 1.4	Max: 8.4 Min: 6.6

Soil Map ID: 3

Soil Component Name: SAN EMIGDIO

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 14	Max: 8.4 Min: 7.9
2	7 inches	40 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 14	Max: 8.4 Min: 7.9
3	40 inches	59 inches	stratified sandy loam to silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 14	Max: 8.4 Min: 7.9

Soil Map ID: 4

Soil Component Name: SAN EMIGDIO

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 14	Max: 8.4 Min: 7.9
2	7 inches	40 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 14	Max: 8.4 Min: 7.9
3	40 inches	59 inches	stratified sandy loam to silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 14	Max: 8.4 Min: 7.9

Soil Map ID: 5

Soil Component Name: Terrace escarpments

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 6

Soil Component Name: PLACENTIA

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	18 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 1.4 Min: 0.42	Max: 8.4 Min: 7.9
2	18 inches	38 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 1.4 Min: 0.42	Max: 8.4 Min: 7.9
3	38 inches	57 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 1.4 Min: 0.42	Max: 8.4 Min: 7.9
4	57 inches	59 inches	gravelly sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 1.4 Min: 0.42	Max: 8.4 Min: 7.9

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 7

Soil Component Name: HANFORD

Soil Surface Texture: coarse sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	coarse sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 5.6
2	7 inches	40 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 5.6

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

PHYSICAL SETTING SOURCE RECORDS SEARCHED

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

APPENDIX D: QUALIFICATIONS

PARTNER

Education

Associates Degree of Language Arts, Olympia-Morata-Gymnasium (Germany)

Highlights

13 years in the due diligence industry conducting Phase I Environmental Site Assessments

Experience Summary

Ms. McCondichie has over 13 years of experience in the environmental industry. She has significant experience in due diligence assessments for a variety of property types and the needs and requirements of varied number of reporting standards, including ASTM standards, EPA's All Appropriate Inquiry (AAI), and customized client formats. Specifically, Ms. McCondichie has experience in environmental and air quality related fields and has conducted over 100 Phase I Environmental Site Assessment (ESA) projects.

In addition, Ms. McCondichie has performed and managed environmental site assessments on various industrial, commercial, institutional and residential properties. Assessments included limited and comprehensive surveys for asbestos, lead-based paint and lead-in-drinking-water analysis. She has also managed subsurface investigations to determine the presence of contamination in soil; prepared written reports in formats prescribed by various fiduciary institutions and performed peer reviews on environmental site assessments completed by other environmental firms.

Finally, Ms. McCondichie's diversity across residential and commercial environments is a major contribution in the Southwest region of the United States.

Asbestos Hazard and Emergency Response Act (AHERA) Building Inspection for Asbestos
Mine Safety and Health Administration (MSHA) – Part 46 and Part 48 Certified
Hazardous Waste Operations and Emergency Response (HAZWOPER), 40-hour (with First Aid, CPR)

Highlights

Over 10 years of experience conducting Phase I and Phase II Environmental Site Assessments (ESAs)
Over 10 years conducting industrial hygiene assessments such as asbestos, lead, radon, and mold surveys

Experience Summary

Mr. Boyce serves as a Project Manager for Partner Engineering and Science, Inc. (Partner), overseeing and managing all aspects of multi-scope projects including Phase I ESAs in accordance with EPA's All Appropriate Inquiry (AAI), Property Condition Assessments (PCAs), Zoning Reports, Seismic Assessments, and Industrial Hygiene-related projects. Mr. Boyce also serves as a senior technical reviewer on environmental due diligence assessments, including Phase I and II ESAs, for a variety of Clients.

Mr. Boyce has significant experience in due diligence assessments for a variety of property types and the needs and requirements of varied number of reporting standards, including ASTM standards, EPA's All Appropriate Inquiry (AAI), and customized client formats. Specifically, Mr. Boyce has performed Phase I Environmental Site Assessments (ESAs), Geotechnical Evaluations, Environmental Transaction Screens, Phase II and III Subsurface Investigations, Regulatory Compliance Assessments, Asbestos Surveys, Lead-based Paint Surveys, Radon Studies, and Mold Assessments.

Environmental Assessments

Duties included performing site visits; gathering zoning, ownership, building permits, fire records, and groundwater well information; geology research; UST and leaking underground storage tank (LUST) file review; aerial photograph interpretation; Resource Conservation Recovery Act (RCRA), Water Quality Assurance Revolving Fund (WQARF), Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) database and city directory review; personal interviews; and preparation of technical reports.

Subsurface Investigations

Mr. Boyce has extensive experience in conducting Phase II Subsurface Investigations on industrial manufacturing facilities, gas stations, auto repair facilities, multi-family residential properties, shopping centers, and undeveloped land. Mr. Boyce has conducted soil and soil gas sampling, oversight of underground storage tank (UST) removals, drywell investigations, and soil and groundwater remediation activities (Former Industrial Plating Facilities/Former Military Airport).

Industrial Hygiene Surveys

Mr. Boyce has served as a Project Scientist/Project Manager on numerous Industrial Hygiene related projects. Projects included asbestos, microbial remediation, lead-based paint, and industrial hygiene (plating and paint mixing facilities) related projects, including sampling, report preparation, and senior review for numerous banking entities, municipalities, law firms, and a variety of commercial businesses throughout the United

States. In addition, Mr. Boyce has provided asbestos and microbial abatement oversight activities at private, commercial, and school facilities.

Geotechnical/Forensic
Mr. Boyce's field experience also includes logging and sampling geotechnical borings for civil engineering projects, and conducting floor measurement surveys for forensic-related studies. Duties included placing boring locations via GPS coordinates, logging borings, collection of soil samples, classifying soils in accordance with Unified Soil Classification System (USCS), and supervision and coordination of drilling and utility locating companies.

Project Experience

Various High Profile and Historic Hotel/Resort Properties, Various locations throughout the United States and Caribbean. Mr. Boyce has managed numerous multi-scope equity projects on high profile and historic hotel/resort properties, with scopes of work including Phase I ESAs, PCAs, Zoning Reports, Seismic Assessments, and Industrial Hygiene-related sampling.

Various High-Rise Commercial Properties, Various locations throughout the United States. Mr. Boyce has managed numerous multi-scope equity projects on high-rise properties, with scopes of work including Phase I ESAs, PCAs, Zoning Reports, Seismic Assessments, and Industrial Hygiene-related sampling.

Various Large-Scale Mining Operations, Various locations throughout the Western United States. Mr. Boyce has managed and conducted numerous multi-scope projects on large-scale coal, copper, and surface mining operations located throughout the western United States, with scopes of work including Phase I and Phase II ESAs, aboveground storage tank (AST) compliance, and asbestos (transite pipe) removal.

Department of Defense Cleanup, Mesa, Arizona. Mr. Boyce was subcontracted to provide general technical operation assistance and routine compliance sampling at a Thermally-Enhanced Soil Vapor Extraction pilot test for a former Air Force jet fueling compound and active Superfund Site.

Former Semi-Conductor Facility, Phoenix, Arizona. Mr. Boyce conducted numerous subsurface investigations at a former semiconductor facility and provided technical oversight during remedial activities and post-remedial clearance sampling.

UST Removal Oversight, Throughout Arizona. Mr. Boyce conducted numerous subsurface investigations and UST removals under the oversight of the Arizona Department of Environmental Quality at various locations throughout Arizona. Mr. Boyce provided technical oversight during remedial activities and post-remedial clearance sampling.

Highlights

Over 16 years in the environmental and engineering consulting industry
Founding member of Partner Engineering and Science, Inc.
Executive Board Member of Partner Engineering and Science, Inc.

Experience Summary

Ms. Redlin has more than 16 years of experience in the environmental and engineering consulting industry. Her background in environmental science, in addition to her knowledge of current commercial real estate due diligence standards, allows her to offer the most efficient and cost-effective means of regulatory compliance. Ms. Redlin has extensive experience managing all aspects of due diligence, specializing in environmental due diligence, for nationwide and local clients such as:

- Residential Developers
- Commercial Developers
- Mortgage Brokers
- Real Estate Brokers
- Individual Property Owners and Buyers
- Financial Institutions including:
- Portfolio Lenders
- SBA Lenders
- HUD Lenders
- Fannie Mae Lenders
- Freddie Mac Lenders
- Private Equity Funds
- Insurance Lenders

Ms. Redlin has gained valuable knowledge and know-how from having been personally involved in the details of thousands of real estate transactions for various client types, and therefore understands the specific needs and scopes of work required for all parties involved in a transaction.

Ms. Redlin has served as an environmental scientist, project manager, or executive senior author on over 15,000 real estate transactions. Ms. Redlin's due diligence resume includes experience at all levels, advising lenders and real estate investors through the following product types:

- Phase I Environmental Site Assessments

- Phase II Subsurface Investigations
- Phase III Site Characterizations
- Remedial Cost Estimates
- Remediation Design and Implementation
- Environmental Transaction Screens
- Property Condition Assessments
- Probable Maximum Loss Assessments
- Property Condition Evaluations

Real estate investors, redevelopment agencies, financial institutions, insurance lenders, and real estate equity funds have come to rely on her advice and judgment to help them with their real estate business decisions. Ms. Redlin is a dedicated professional who takes pride and pleasure in meeting her client's needs and spearheading and assembling the team with the expertise to handle any issue that may come up during the transaction.

Project Experience

Ms. Redlin has extensive experience in testing soil, soil gas, and groundwater in the context of a real estate transaction, as well as under the supervision of state and federal regulators. Among her specialties is guiding landowners and prospective purchasers through the process of selling or acquiring an environmentally challenged site.

Ms. Redlin has participated in the characterization of groundwater and soil contamination; quarterly groundwater monitoring; implementation of various systems such as soil vapor extraction systems, dual phase extraction systems, ozone sparging, air sparging, pump and treat; and soil excavation projects such as tank removals at several clean-up sites in Los Angeles and Orange County.

Ms. Redlin also has extensive experience in environmental compliance monitoring and biological consulting. She has extensive experience working as an independent contractor for and in conjunction with state and local agencies such as Santa Barbara County Parks, California Department of Fish and Game, California Public Utilities Commission, Los Angeles Water and Sanitation and others. This included monitoring construction activities near sensitive biological receptors; containing, quantifying and reporting any hazardous material spills that occurred; working with construction crews to ensure compliance with environmental permit regulations as well as reporting to interested parties on the progress and compliance of the project.

Distinctions

Real Estate Forum- Woman of Influence 2012

Ms. Redlin was named by the Los Angeles Business Journal for Women Making a Difference in 2010.

Ms. Redlin has been designated a 2009 California Mortgage Bankers Association (CMBA) Future Leader.

Ms. Redlin was named Real Estate Southern California Woman of Influence in 2008 for her role in the area's commercial real estate transactions.

Ms. Redlin was one of only two consultants asked to sit on the Risk Managers Association (RMA) Credit Committee roundtable which discussed the effects of the new Federal All Appropriate Inquiries (AAI) standard on Phase I Environmental Site Assessments.

Ms. Redlin received an Industry Profile of Distinction in Brownfield Renewal.

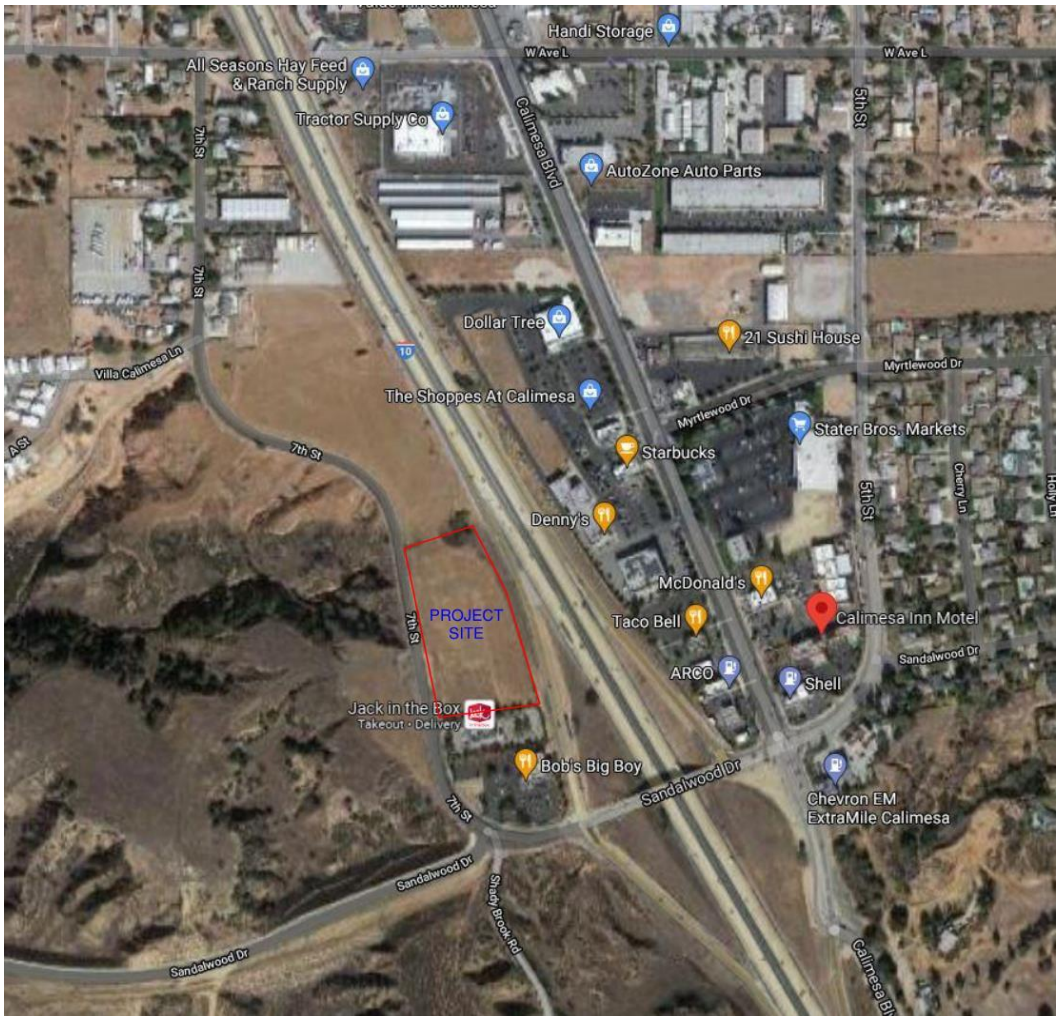
I. PROJECT DESCRIPTION.....3

II. EXISTING DRAINAGE.....4

III. PROPOSED DRAINAGE.....4-5

IV. HYDROLOGY DISCUSSION.....6

APPENDIX A.....7



Hydrology Analyses using Civil Design.....8-9

APPENDIX B.....10

Hydrology Maps.....10

I. PROJECT DESCRIPTION

The project site is located in the City of Calimesa on 7th Street. It is bounded by a fast food restaurant (Jack in the Box) in the south, 10 freeway in the east, an undeveloped land in the north, and 7th Street in the west. The proposed project is a commercial consisting of a gas station with a retail store with a parking lot. The entire site will be developed an it is approximately 3.79 acres.

II. EXISTING DRAINAGE

Current site condition is undeveloped covered with annual grass. Drainage is observed to be naturally flowing from the east to west portion of the site with an elevation difference of approximately 8 feet.

For hydrology calculation, Civil Design software was used to determine the flowrate (Q) and volume (V) of the existing condition. The entire site was analyzed as one tributary area, 1A. Below is summary of the results for the 2-yr, 10-yr, and 100-yr storm events. Printout of the results are attached in Appendix A.

See attached "Hydrology Map - Existing Condition" in Appendix B for more information.

Existing Condition:

Hydrology Data:
Area = 3.75 ac
Undeveloped (Poor Condition)
Tc = 18.97 min.
Soil Type = B

Existing Flowrate (Q) and Volume (V)		
Storm Event	Q (cfs)	V (cf)
2-yr	0.36	4,702
10-yr	1.06	14,506
100-yr	2.53	50,388

III. PROPOSED DRAINAGE

Drainage for the proposed condition consists of utilizing bioretentions. Runoff generated from the proposed development is directed towards the west and conveyed and treated through three bioretentions along the west property line. An underground 60-inch diameter CMP is added to mitigate the remaining runoff. Overflows from the underground detention basin is discharged into 7th Street through a parkway drain.

For hydrology calculation, Civil Design software was used to determine the flowrate (Q) and volume (V) of the proposed condition. The entire site was analyzed as one tributary area, 1A. Bioretentions are sized through interpolation based on area. Below is summary of the results for the 2-yr, 10-yr, and 100-yr storm events. Printout of the results are attached in Appendix A.

See attached "Hydrology Map - Proposed Condition" in Appendix B for more information.

Proposed Condition:

Hydrology Data:
Area = 3.75 ac
Commercial
Tc = 9.90 min.
Soil Type = B

Proposed Flowrate (Q) and Volume (V)		
Time Duration	Q (cfs)	V (cf)
2-yr	1.06	28,798
10-yr	1.73	45,620
100-yr	2.93	74,129

IV. HYDROLOGY DISCUSSION

The purpose of this hydrology study is to comply to determine, if any, the flowrate and volume required to be mitigated based on the increase from existing to proposed condition. To comply with the requirements, both existing and proposed condition were analyzed to ensure that flowrate for the proposed condition does not exceed the existing condition. To do so, any volume increase among the 2-yr, 10-yr, and 100-yr storm event will be mitigated through the bioretentions. Below is a summary of the results.

Flowrate (Q) and Volume (V) Comparison						
	Q (cfs)			V (cf)		
Storm Event	Existing	Proposed	Delta	Existing	Proposed	Delta
2-yr	0.36	1.06	0.70	4,702	28,798	24,096
10-yr	1.06	1.73	0.67	14,506	45,620	31,114
100-yr	2.53	2.93	0.54	50,388	74,129	23,741

Results above show the 10-yr storm with the biggest volume increase of 31,114 cf. To mitigate said volume, bioretentions and a 60-inch diameter underground detention basin is proposed. The underground system is a 60-inch diameter CMP that spans at 22 ft with a volume capacity of 21,598 cf. There are three proposed bioretentions with a total volume capacity of 9,866 cf. The combined volume capacity for the proposed development is 31,464 cf exceeding the 31,114 cf.

Bioretentions are proposed as storm water treatment required by Water Quality Management Plan (WQMP). See separate WQMP report for more information.

[1] Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

Please refer to NOAA Atlas 14 document for more information.

Process from Point/Station        1.000 to Point/Station        2.000
**** INITIAL AREA EVALUATION ****
_____________________________________________________________________________
Initial area flow distance =   664.000(Ft.)
Top (of initial area) elevation =  2394.250(Ft.)
Bottom (of initial area) elevation =  2389.270(Ft.)
Difference in elevation =     4.980(Ft.)
Slope =    0.00750  s(percent)=       0.75
TC = k(0.530)*[(length^3)/(elevation change)]^0.2
Initial area time of concentration =   18.973 min.
Rainfall intensity =      1.135(In/Hr) for a     2.0 year storm
UNDEVELOPED (poor cover) subarea
Runoff Coefficient = 0.676
Decimal fraction soil group A = 0.000
Decimal fraction soil group B = 1.000
Decimal fraction soil group C = 0.000
Decimal fraction soil group D = 0.000
RI index for soil(AMC 2)  =  78.00
Pervious area fraction =  1.000; Impervious fraction =  0.000
Initial subarea runoff =      2.877(CFS)
Total initial stream area =        3.750(Ac.)
Pervious area fraction = 1.000
End of computations, total study area =            3.75 (Ac.)
The following figures may
be used for a unit hydrograph study of the same area.

Area averaged pervious area fraction(Ap) = 1.000
Area averaged RI index number =  78.0

Riverside County Synthetic Unit Hydrology Method
RCFC & WCD Manual date - April 1978

Program License Serial Number 6497

English (in-lb) Input Units Used
English Rainfall Data (Inches) Input Values Used

English Units used in output format

UNIT HYDROGRAPH FOR EXISTING CONDITION - 2 YR STORM

Drainage Area = 3.75(Ac.) = 0.006 Sq. Mi.
Drainage Area for Depth-Area Areal Adjustment = 3.75(Ac.) = 0.006 Sq. Mi.
USER Entry of lag time in hours
Lag time = 0.320 Hr.
Lag time = 19.20 Min.
25% of lag time = 4.80 Min.
40% of lag time = 7.68 Min.
Unit time = 5.00 Min.
Duration of storm = 24 Hour(s)
User Entered Base Flow = 0.00(CFS)

2 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
3.75	2.58	9.68

100 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
3.75	6.22	23.32

STORM EVENT (YEAR) = 2.00
Area Averaged 2-Year Rainfall = 2.580(In)
Area Averaged 100-Year Rainfall = 6.220(In)

Point rain (area averaged) = 2.580(In)
Areal adjustment factor = 100.00 %
Adjusted average point rain = 2.580(In)

Sub-Area Data:

Area(Ac.)	Runoff Index	Impervious %
3.750	78.00	0.000

Total Area Entered = 3.75(Ac.)

RI AMC2	RI AMC-2	Infil. Rate (In/Hr)	Impervious (Dec.%)	Adj. Infil. Rate (In/Hr)	Area% (Dec.)	F (In/Hr)
78.0	78.0	0.268	0.000	0.268	1.000	0.268
					Sum (F) =	0.268

Area averaged mean soil loss (F) (In/Hr) = 0.268
Minimum soil loss rate ((In/Hr)) = 0.134
(for 24 hour storm duration)
Soil low loss rate (decimal) = 0.900

Riverside County Synthetic Unit Hydrology Method
RCFC & WCD Manual date - April 1978

Program License Serial Number 6497

English (in-lb) Input Units Used
English Rainfall Data (Inches) Input Values Used

English Units used in output format

UNIT HYDROGRAPH FOR EXISTING CONDITION -10 YR STORM

Drainage Area = 3.75(Ac.) = 0.006 Sq. Mi.
Drainage Area for Depth-Area Areal Adjustment = 3.75(Ac.) = 0.006 Sq. Mi.
USER Entry of lag time in hours
Lag time = 0.320 Hr.
Lag time = 19.20 Min.
25% of lag time = 4.80 Min.
40% of lag time = 7.68 Min.
Unit time = 5.00 Min.
Duration of storm = 24 Hour(s)
User Entered Base Flow = 0.00(CFS)

2 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
3.75	2.58	9.68

100 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
3.75	6.22	23.32

STORM EVENT (YEAR) = 10.00
Area Averaged 2-Year Rainfall = 2.580(In)
Area Averaged 100-Year Rainfall = 6.220(In)

Point rain (area averaged) = 4.078(In)
Areal adjustment factor = 100.00 %
Adjusted average point rain = 4.077(In)

Sub-Area Data:

Area(Ac.)	Runoff Index	Impervious %
3.750	78.00	0.000

Total Area Entered = 3.75(Ac.)

RI AMC2	RI AMC-2	Infil. Rate (In/Hr)	Impervious (Dec.%)	Adj. Infil. Rate (In/Hr)	Area% (Dec.)	F (In/Hr)
78.0	78.0	0.268	0.000	0.268	1.000	0.268
					Sum (F) =	0.268

Area averaged mean soil loss (F) (In/Hr) = 0.268
Minimum soil loss rate ((In/Hr)) = 0.134
(for 24 hour storm duration)
Soil low loss rate (decimal) = 0.900

Riverside County Synthetic Unit Hydrology Method
RCFC & WCD Manual date - April 1978

Program License Serial Number 6497

English (in-lb) Input Units Used
English Rainfall Data (Inches) Input Values Used

English Units used in output format

UNIT HYDROGRAPH FOR EXISTING CONDITION - 100-YR STORM - 24-HOURS

Drainage Area = 3.75(Ac.) = 0.006 Sq. Mi.
Drainage Area for Depth-Area Areal Adjustment = 3.75(Ac.) = 0.006 Sq. Mi.
USER Entry of lag time in hours
Lag time = 0.320 Hr.
Lag time = 19.20 Min.
25% of lag time = 4.80 Min.
40% of lag time = 7.68 Min.
Unit time = 5.00 Min.
Duration of storm = 24 Hour(s)
User Entered Base Flow = 0.00(CFS)

2 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
3.75	2.58	9.68

100 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
3.75	6.22	23.32

STORM EVENT (YEAR) = 100.00
Area Averaged 2-Year Rainfall = 2.580(In)
Area Averaged 100-Year Rainfall = 6.220(In)

Point rain (area averaged) = 6.220(In)
Areal adjustment factor = 100.00 %
Adjusted average point rain = 6.220(In)

Sub-Area Data:

Area(Ac.)	Runoff Index	Impervious %
3.750	78.00	0.000

Total Area Entered = 3.75(Ac.)

RI AMC2	RI AMC-3	Infil. Rate (In/Hr)	Impervious (Dec.%)	Adj. Infil. Rate (In/Hr)	Area% (Dec.)	F (In/Hr)
78.0	89.8	0.132	0.000	0.132	1.000	0.132
					Sum (F) =	0.132

Area averaged mean soil loss (F) (In/Hr) = 0.132
Minimum soil loss rate ((In/Hr)) = 0.066
(for 24 hour storm duration)
Soil low loss rate (decimal) = 0.900

RATIONAL METHOD FOR PROPOSED CONDITION - 2-YR STORM

********* Hydrology Study Control Information **********

English (in-lb) Units used in input data file

Program License Serial Number 6497

Rational Method Hydrology Program based on
Riverside County Flood Control & Water Conservation District
1978 hydrology manual

Storm event (year) = 2.00 Antecedent Moisture Condition = 2

Standard intensity-duration curves data (Plate D-4.1)
For the [Calimesa] area used.
10 year storm 10 minute intensity = 2.440(In/Hr)
10 year storm 60 minute intensity = 0.910(In/Hr)
100 year storm 10 minute intensity = 3.620(In/Hr)
100 year storm 60 minute intensity = 1.350(In/Hr)

Storm event year = 2.0
Calculated rainfall intensity data:
1 hour intensity = 0.602(In/Hr)
Slope of intensity duration curve = 0.5500

```
++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++
Process from Point/Station        1.000 to Point/Station        2.000
**** INITIAL AREA EVALUATION ****
_____________________________________________________________________________
Initial area flow distance =   567.000(Ft.)
Top (of initial area) elevation =  2393.500(Ft.)
Bottom (of initial area) elevation =  2388.850(Ft.)
Difference in elevation =     4.650(Ft.)
Slope =    0.00820  s(percent)=       0.82
TC = k(0.300)*[(length^3)/(elevation change)]^0.2
Initial area time of concentration =    9.903 min.
Rainfall intensity =      1.623(In/Hr) for a     2.0 year storm
COMMERCIAL subarea type
Runoff Coefficient = 0.865
Decimal fraction soil group A = 0.000
Decimal fraction soil group B = 1.000
Decimal fraction soil group C = 0.000
Decimal fraction soil group D = 0.000
RI index for soil(AMC 2)  =  56.00
Pervious area fraction =  0.100; Impervious fraction =  0.900
Initial subarea runoff =      5.262(CFS)
Total initial stream area =        3.750(Ac.)
Pervious area fraction = 0.100
End of computations, total study area =            3.75 (Ac.)
The following figures may
be used for a unit hydrograph study of the same area.

Area averaged pervious area fraction(Ap) = 0.100
Area averaged RI index number =  56.0
```

Riverside County Synthetic Unit Hydrology Method
RCFC & WCD Manual date - April 1978

Program License Serial Number 6497

English (in-lb) Input Units Used
English Rainfall Data (Inches) Input Values Used

English Units used in output format

UNIT HYDROGRAPH FOR PROPOSED CONDITION - 2 YR STORM

Drainage Area = 3.75(Ac.) = 0.006 Sq. Mi.
Drainage Area for Depth-Area Areal Adjustment = 3.75(Ac.) = 0.006 Sq. Mi.
USER Entry of lag time in hours
Lag time = 0.167 Hr.
Lag time = 10.00 Min.
25% of lag time = 2.50 Min.
40% of lag time = 4.00 Min.
Unit time = 5.00 Min.
Duration of storm = 24 Hour(s)
User Entered Base Flow = 0.00(CFS)

2 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
3.75	2.58	9.68

100 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
3.75	6.22	23.32

STORM EVENT (YEAR) = 2.00
Area Averaged 2-Year Rainfall = 2.580(In)
Area Averaged 100-Year Rainfall = 6.220(In)

Point rain (area averaged) = 2.580(In)
Areal adjustment factor = 100.00 %
Adjusted average point rain = 2.580(In)

Sub-Area Data:

Area(Ac.)	Runoff Index	Impervious %
3.750	56.00	0.900

Total Area Entered = 3.75(Ac.)

RI AMC2	RI AMC-2	Infil. Rate (In/Hr)	Impervious (Dec.%)	Adj. Infil. Rate (In/Hr)	Area% (Dec.)	F (In/Hr)
56.0	56.0	0.511	0.900	0.097	1.000	0.097
					Sum (F) =	0.097

Area averaged mean soil loss (F) (In/Hr) = 0.097
Minimum soil loss rate ((In/Hr)) = 0.049
(for 24 hour storm duration)
Soil low loss rate (decimal) = 0.180

Riverside County Synthetic Unit Hydrology Method
RCFC & WCD Manual date - April 1978

Program License Serial Number 6497

English (in-lb) Input Units Used
English Rainfall Data (Inches) Input Values Used

English Units used in output format

UNIT HYDROGRAPH FOR PROPOSED CONDITION - 10 YR STORM - 24 HRS

Drainage Area = 3.75(Ac.) = 0.006 Sq. Mi.
Drainage Area for Depth-Area Areal Adjustment = 3.75(Ac.) = 0.006 Sq. Mi.
USER Entry of lag time in hours
Lag time = 0.167 Hr.
Lag time = 10.00 Min.
25% of lag time = 2.50 Min.
40% of lag time = 4.00 Min.
Unit time = 5.00 Min.
Duration of storm = 24 Hour(s)
User Entered Base Flow = 0.00(CFS)

2 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
3.75	2.58	9.68

100 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
3.75	6.22	23.32

STORM EVENT (YEAR) = 10.00
Area Averaged 2-Year Rainfall = 2.580(In)
Area Averaged 100-Year Rainfall = 6.220(In)

Point rain (area averaged) = 4.078(In)
Areal adjustment factor = 100.00 %
Adjusted average point rain = 4.077(In)

Sub-Area Data:

Area(Ac.)	Runoff Index	Impervious %
3.750	56.00	0.900

Total Area Entered = 3.75(Ac.)

RI AMC2	RI AMC-2	Infil. Rate (In/Hr)	Impervious (Dec.%)	Adj. Infil. Rate (In/Hr)	Area% (Dec.)	F (In/Hr)
56.0	56.0	0.511	0.900	0.097	1.000	0.097
					Sum (F) =	0.097

Area averaged mean soil loss (F) (In/Hr) = 0.097
Minimum soil loss rate ((In/Hr)) = 0.049
(for 24 hour storm duration)
Soil low loss rate (decimal) = 0.180

U n i t H y d r o g r a p h
VALLEY S-Curve

Unit Hydrograph Data

Unit time period (hrs)		Time % of lag	Distribution Graph %	Unit Hydrograph (CFS)

Riverside County Synthetic Unit Hydrology Method
RCFC & WCD Manual date - April 1978

Program License Serial Number 6497

English (in-lb) Input Units Used
English Rainfall Data (Inches) Input Values Used

English Units used in output format

UNIT HYDROGRAPH FOR PROPOSED CONDITION - 100 YR STORM - 24 HRS

Drainage Area = 3.75(Ac.) = 0.006 Sq. Mi.
Drainage Area for Depth-Area Areal Adjustment = 3.75(Ac.) = 0.006 Sq. Mi.
USER Entry of lag time in hours
Lag time = 0.167 Hr.
Lag time = 10.00 Min.
25% of lag time = 2.50 Min.
40% of lag time = 4.00 Min.
Unit time = 5.00 Min.
Duration of storm = 24 Hour(s)
User Entered Base Flow = 0.00(CFS)

2 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
3.75	2.58	9.68

100 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
3.75	6.22	23.32

STORM EVENT (YEAR) = 100.00
Area Averaged 2-Year Rainfall = 2.580(In)
Area Averaged 100-Year Rainfall = 6.220(In)

Point rain (area averaged) = 6.220(In)
Areal adjustment factor = 100.00 %
Adjusted average point rain = 6.220(In)

Sub-Area Data:

Area(Ac.)	Runoff Index	Impervious %
3.750	56.00	0.900

Total Area Entered = 3.75(Ac.)

RI AMC2	RI AMC-3	Infil. Rate (In/Hr)	Impervious (Dec.%)	Adj. Infil. Rate (In/Hr)	Area% (Dec.)	F (In/Hr)
56.0	74.8	0.305	0.900	0.058	1.000	0.058
					Sum (F) =	0.058

Area averaged mean soil loss (F) (In/Hr) = 0.058
Minimum soil loss rate ((In/Hr)) = 0.029
(for 24 hour storm duration)
Soil low loss rate (decimal) = 0.180

Appendix G-2

Addendum Letter 1 to the Hydrology Report
Prepared by RAMCAM Engineering Group, Inc.,
August 2022

RAMCAM Engineering Group, Inc.
Land Development Planning and Engineering Design
670 E. Parkridge Ave., Suite #101
Corona, CA 92879-6606
Tel (951) 734-6330

The Hydrology Report documented the mitigation of the increased run of for the peak flow of Q2-24hr and Q100-24hr flow (CFS). "Per Table 1" below, the Q2-24hr peak flow of the pre and post conditions differential is greater than the Q100-24hr peak flow differential, so it controls for the sake of the calculations.

The peak flow per the printout of the Flood Hydrograph shows that the peak flow occurs at 13 hrs. and 50 min. The proposed Bioretention basins include a 6-inch ponding over a 36-inch amended soil layer. The calculations of the drawdown of the basins show a time of 16 hrs. and 28 min, exceeding the peak flow time.

To determine the basin sizing to accommodate the flow exceeding the Pre-Development peak flow of 0.256cfs, a routing program was run to size the retention volume needed as a split flow basin. It was determined that a flow of more than 0.31 (Ac/Ft) (13,503.6 cf) needs to be diverted into the proposed Bioretention Basins. The calculated basins capacity is 17,937.3 cf, which exceeds the demand for volume retention.

The WQMP documented the mitigation of the increased run of for the peak flow of Q2-24hr and to satisfy the Hydrologic Conditions of Concern (HCOC) mentioned above. Also documented maintaining the predevelopment peak flow as is required by the WQMP.

PRE-DEVELOPMENT

RAINFALL DATA YEAR	2YR- 24 HOUR STORM VOLUME (CF)	2YR- 24 HOUR PEAK FLOW RATE (CFS)	100YR- 24 HOUR STORM VOLUME (CF)	100YR- 24 HOUR PEAK FLOW RATE (CFS)
	3,083.8	**0.256**	34,471.7	2.387

POST DEVELOPMENT

RAINFALL DATA YEAR	2YR- 24HOUR STORM VOLUME (CF)	2-HOUR PEAK FLOW RATE (CFS)	100YR- 24HOUR STORM VOLUME (CF)	100YR- 24HOUR PEAK FLOW RATE (CFS)
	17,435.7	**0.720**	61,876.7	2.708
Delta flow	14,351.9	**0.464**		**0.321**

Respectfully submitted.

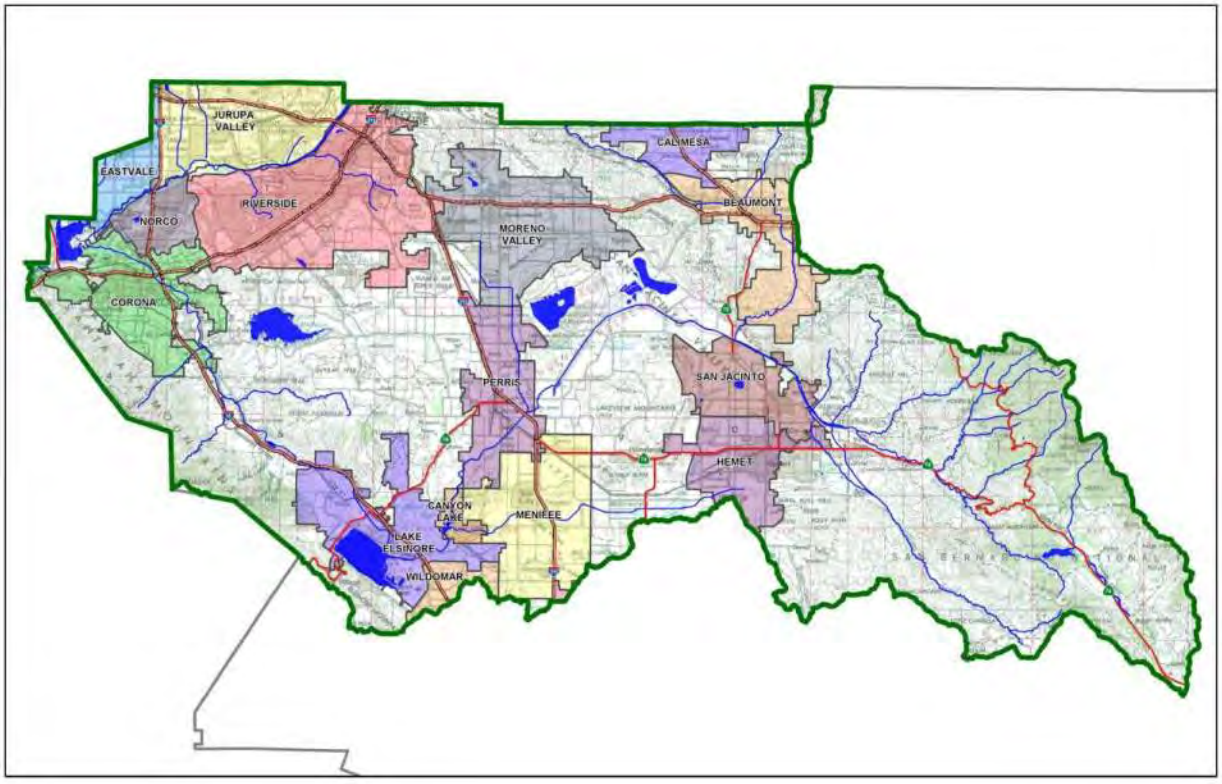
Water Quality Management Plan



Project Specific Water Quality Management Plan

*A Template for Projects located within the **Santa Ana Watershed** Region of Riverside County*

Project Title: 7th Street Gas Station

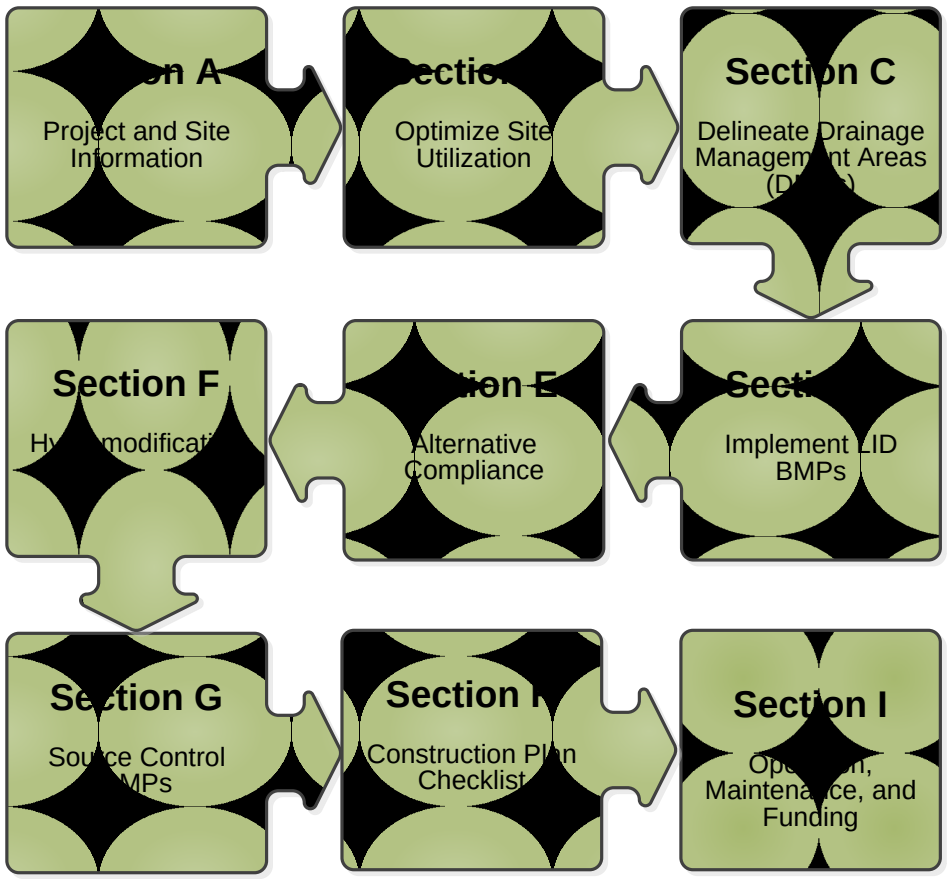
Development No: TBD

Design Review/Case No: TBD

☒ **Preliminary**
☐ **Final**

Original Date Prepared: February 20, 2021

Revision Date(s):



Prepared for Compliance with
Regional Board Order No. **R8-2010-0033**
Template revised June 30, 2016

Contact Information:

Prepared for: Sandalwood Travel Center, LP
P.O. Box 1958
Corona, CA 92878
Prepared by: Gil Zulueta Mendoza
Assoc., Inc.
6185 Magnolia Avenue, #129
Riverside, CA 92506

A Brief Introduction

This Project-Specific WQMP Template for the **Santa Ana Region** has been prepared to help guide you in documenting compliance for your project. Because this document has been designed to specifically document compliance, you will need to utilize the WQMP Guidance Document as your "how-to" manual to help guide you through this process. Both the Template and Guidance Document go hand-in-hand, and will help facilitate a well prepared Project-Specific WQMP. Below is a flowchart for the layout of this Template that will provide the steps required to document compliance.

OWNER'S CERTIFICATION

This Project-Specific Water Quality Management Plan (WQMP) has been prepared for Sandalwood Travel Center, LP by Gil Mendoza for the 7th Street Gas Station project.

This WQMP is intended to comply with the requirements of Calimesa for <Insert Ordinance No.> which includes the requirement for the preparation and implementation of a Project-Specific WQMP.

The undersigned, while owning the property/project described in the preceding paragraph, shall be responsible for the implementation and funding of this WQMP and will ensure that this WQMP is amended as appropriate to reflect up-to-date conditions on the site. In addition, the property owner accepts responsibility for interim operation and maintenance of Stormwater BMPs until such time as this responsibility is formally transferred to a subsequent owner. This WQMP will be reviewed with the facility operator, facility supervisors, employees, tenants, maintenance and service contractors, or any other party (or parties) having responsibility for implementing portions of this WQMP. At least one copy of this WQMP will be maintained at the project site or project office in perpetuity. The undersigned is authorized to certify and to approve implementation of this WQMP. The undersigned is aware that implementation of this WQMP is enforceable under Calimesa Water Quality Ordinance (Municipal Code Section).

"I, the undersigned, certify under penalty of law that the provisions of this WQMP have been reviewed and accepted and that the WQMP will be transferred to future successors in interest."

Owner's Signature	Date
Owner's Printed Name	Owner's Title/Position

PREPARER'S CERTIFICATION

"The selection, sizing and design of stormwater treatment and other stormwater quality and quantity control measures in this plan meet the requirements of Regional Water Quality Control Board Order No. **R8-2010-0033** and any subsequent amendments thereto."

Preparer's Signature	Date

Section A: Project and Site Information

PROJECT INFORMATION			
Type of Project:	Commercial		
Planning Area:			
Community Name:	Calimesa		
Development Name:	Gas Station		
PROJECT LOCATION			
Latitude & Longitude (DMS): 33.8925, -117.3648			
Project Watershed and Sub-Watershed: San Timoteo Creek, Santa Ana River			
Gross Acres: 3.75			
APN(s):			
Map Book and Page No.:			
PROJECT CHARACTERISTICS			
Proposed or Potential Land Use(s)		Commercial	
Proposed or Potential SIC Code(s)		Insert text here	
Area of Impervious Project Footprint (SF)		136,799	
Total Area of proposed Impervious Surfaces within the Project Footprint (SF)/or Replacement		136,799	
Does the project consist of offsite road improvements?		☐ Y	☒ N
Does the project propose to construct unpaved roads?		☐ Y	☒ N
Is the project part of a larger common plan of development (phased project)?		☐ Y	☒ N
EXISTING SITE CHARACTERISTICS			
Total area of existing Impervious Surfaces within the Project limits Footprint (SF)		0	
Is the project located within any MSHCP Criteria Cell?		☐ Y	☒ N
If so, identify the Cell number:			
Are there any natural hydrologic features on the project site?		☐ Y	☒ N
Is a Geotechnical Report attached?		☒ Y	☐ N
If no Geotech. Report, list the NRCS soils type(s) present on the site (A, B, C and/or D)			
What is the Water Quality Design Storm Depth for the project?		0.80	

A.1 Maps and Site Plans

When completing your Project-Specific WQMP, include a map of the local vicinity and existing site. In addition, include all grading, drainage, landscape/plant palette and other pertinent construction plans in Appendix 2. At a **minimum**, your WQMP Site Plan should include the following:

- Drainage Management Areas
- Proposed Structural BMPs
- Drainage Path
- Drainage Infrastructure, Inlets, Overflows
- Source Control BMPs
- Buildings, Roof Lines, Downspouts
- Impervious Surfaces
- Standard Labeling
- BMP Locations (Lat/Long)

Use your discretion on whether or not you may need to create multiple sheets or can appropriately accommodate these features on one or two sheets. Keep in mind that the Co-Permittee plan reviewer must be able to easily analyze your project utilizing this template and its associated site plans and maps.

A.2 Identify Receiving Waters

Using Table A.1 below, list in order of upstream to downstream, the receiving waters that the project site is tributary to. Continue to fill each row with the Receiving Water's 303(d) listed impairments (if any), designated beneficial uses, and proximity, if any, to a RARE beneficial use. Include a map of the receiving waters in Appendix 1.

Table A.1 Identification of Receiving Waters

Receiving Waters	EPA Approved 303(d) List Impairments	Designated Beneficial Uses	Proximity to RARE Beneficial Use
San Timoteo Creek			
Santa Ana River 4, 3, 2	Pathogens	AGR, GWR, REC1, REC2, WARM, WILD, RARE, SPWN	

A.3 Additional Permits/Approvals required for the Project:

Table A.2 Other Applicable Permits

Agency	Permit Required	
State Department of Fish and Game, 1602 Streambed Alteration Agreement	☐ Y	☒ N
State Water Resources Control Board, Clean Water Act (CWA) Section 401 Water Quality Cert.	☐ Y	☒ N
US Army Corps of Engineers, CWA Section 404 Permit	☐ Y	☒ N
US Fish and Wildlife, Endangered Species Act Section 7 Biological Opinion	☐ Y	☒ N
Statewide Construction General Permit Coverage	☐ Y	☒ N
Statewide Industrial General Permit Coverage	☐ Y	☒ N
Western Riverside MSHCP Consistency Approval (e.g., JPR, DBESP)	☐ Y	☒ N
Other *(please list in the space below as required)*	☐ Y	☐ N

If yes is answered to any of the questions above, the Co-Permittee may require proof of approval/coverage from those agencies as applicable including documentation of any associated requirements that may affect this Project-Specific WQMP.

Section B: Optimize Site Utilization (LID Principles)

Review of the information collected in Section 'A' will aid in identifying the principal constraints on site design and selection of LID BMPs as well as opportunities to reduce imperviousness and incorporate LID Principles into the site and landscape design. For example, **constraints** might include impermeable soils, high groundwater, groundwater pollution or contaminated soils, steep slopes, geotechnical instability, high-intensity land use, heavy pedestrian or vehicular traffic, utility locations or safety concerns. **Opportunities** might include existing natural areas, low areas, oddly configured or otherwise unbuildable parcels, easements and landscape amenities including open space and buffers (which can double as locations for bioretention BMPs), and differences in elevation (which can provide hydraulic head). Prepare a brief narrative for each of the site optimization strategies described below. This narrative will help you as you proceed with your LID design and explain your design decisions to others.

The 2010 Santa Ana MS4 Permit further requires that LID Retention BMPs (Infiltration Only or Harvest and Use) be used unless it can be shown that those BMPs are infeasible. Therefore, it is important that your narrative identify and justify if there are any constraints that would prevent the use of those categories of LID BMPs. Similarly, you should also note opportunities that exist which will be utilized during project design. Upon completion of identifying Constraints and Opportunities, include these on your WQMP Site plan in Appendix 1.

Consideration of "highest and best use" of the discharge should also be considered. For example, Lake Elsinore is evaporating faster than runoff from natural precipitation can recharge it. Requiring infiltration of 85% of runoff events for projects tributary to Lake Elsinore would only exacerbate current water quality problems associated with Pollutant concentration due to lake water evaporation. In cases where rainfall events have low potential to recharge Lake Elsinore (i.e. no hydraulic connection between groundwater to Lake Elsinore, or other factors), requiring infiltration of Urban Runoff from projects is counterproductive to the overall watershed goals. Project proponents, in these cases, would be allowed to discharge Urban Runoff, provided they used equally effective filtration-based BMPs.

Site Optimization

The following questions are based upon Section 3.2 of the WQMP Guidance Document. Review of the WQMP Guidance Document will help you determine how best to optimize your site and subsequently identify opportunities and/or constraints, and document compliance.

Did you identify and preserve existing drainage patterns? If so, how? If not, why?

Existing drainage patterns could not be preserved. The proposed project requires the entire site to be disturbed.

Did you identify and protect existing vegetation? If so, how? If not, why?

There are no existing vegetation to be preserved.

Did you identify and preserve natural infiltration capacity? If so, how? If not, why?

Natural infiltration capacity couldn't be preserved. The proposed project requires the entire site to be disturbed.

Did you identify and minimize impervious area? If so, how? If not, why?

Impervious area in the proposed development is based on the City's minimum requirement.

Did you identify and disperse runoff to adjacent pervious areas? If so, how? If not, why?

Yes, runoff generated from the project will be discharge into bioretentions.

Section C: Delineate Drainage Management Areas (DMAs)

Utilizing the procedure in Section 3.3 of the WQMP Guidance Document which discusses the methods of delineating and mapping your project site into individual DMAs, complete Table C.1 below to appropriately categorize the types of classification (e.g., Type A, Type B, etc.) per DMA for your project site. Upon completion of this table, this information will then be used to populate and tabulate the corresponding tables for their respective DMA classifications.

Table C.1 DMA Classifications

DMA Name or ID	Surface Type(s)[1][2]	Area (Sq. Ft.)	DMA Type
DMA1 A/1	Landscaped	10,939	Self-Treating Areas
DMA1 D/1	Concrete / AC Pavement	39,571	Draining to BMPS (Bioretention)
DMA1 D/2	Roofs	4,726	Draining to BMPS (Bioretention)
DMA2 A/1	Landscaped	15,488	Self-Treating Areas
DMA2 D/1	Concrete / AC Pavement	81,783	Draining to BMPS (Bioretention)
DMA2 D/2	Roofs	10,719	Draining to BMPS (Bioretention)

[1] *Reference Table 2-1 in the WQMP Guidance Document to populate this column*
[2] *If multi-surface provide back-up*

Table C.2 Type 'A', Self-Treating Areas

DMA Name or ID	**Area (Sq. Ft.)**	**Stabilization Type**	**Irrigation Type (if any)**
DMA1 A/1	10,939	Landscaped	Drip Irrigation
DMA2 A/1	15,488	Landscaped	Drip Irrigation

Table C.3 Type 'B', Self-Retaining Areas

Self-Retaining Area				**Type 'C' DMAs that are draining to the Self-Retaining Area**		
DMA Name/ ID	Post-project surface type	Area (square feet) [A]	Storm Depth (inches) [B]	DMA Name / ID	[C] from Table C.4 =	Required Retention Depth (inches) [D]

$$[D] = [B] + \frac{[B] \cdot [C]}{[A]}$$

Table C.4 Type 'C', Areas that Drain to Self-Retaining Areas

DMA					**Receiving Self-Retaining DMA**		
DMA Name/ ID	Area (square feet)	Post-project surface type	Impervious fraction	Product		Area (square feet)	Ratio
	[A]		[B]	[C] = [A] x [B]	DMA name /ID	[D]	[C]/[D]

Table C.5 Type 'D', Areas Draining to BMPs

DMA Name or ID	BMP Name or ID
DMA1 D/1	Biorention 1
DMA1 D/2	Biorention 1
DMA2 D/1	Biorention 3
DMA2 D/2	Biorention 2

Note: More than one drainage management area can drain to a single LID BMP, however, one drainage management area may not drain to more than one BMP.

Section D: Implement LID BMPs

D.1 Infiltration Applicability

Is there an approved downstream 'Highest and Best Use' for stormwater runoff (see discussion in Chapter 2.4.4 of the WQMP Guidance Document for further details)? ☐ Y ☒ N

If yes has been checked, Infiltration BMPs shall not be used for the site; proceed to section D.3

If no, continue working through this section to implement your LID BMPs. It is recommended that you contact your Co-Permittee to verify whether or not your project discharges to an approved downstream 'Highest and Best Use' feature.

Geotechnical Report

A Geotechnical Report or Phase I Environmental Site Assessment may be required by the Copermittee to confirm present and past site characteristics that may affect the use of Infiltration BMPs. In addition, the Co-Permittee, at their discretion, may not require a geotechnical report for small projects as described in Chapter 2 of the WQMP Guidance Document. If a geotechnical report has been prepared, include it in Appendix 3. In addition, if a Phase I Environmental Site Assessment has been prepared, include it in Appendix 4.

Is this project classified as a small project consistent with the requirements of Chapter 2 of the WQMP Guidance Document? ☐ Y ☒ N

Infiltration Feasibility

Table D.1 below is meant to provide a simple means of assessing which DMAs on your site support Infiltration BMPs and is discussed in the WQMP Guidance Document in Chapter 2.4.5. Check the appropriate box for each question and then list affected DMAs as applicable. If additional space is needed, add a row below the corresponding answer.

Table D.1 Infiltration Feasibility

Does the project site…	YES	NO
…have any DMAs with a seasonal high groundwater mark shallower than 10 feet?		X
If Yes, list affected DMAs:		
…have any DMAs located within 100 feet of a water supply well?		X
If Yes, list affected DMAs:		
…have any areas identified by the geotechnical report as posing a public safety risk where infiltration of stormwater could have a negative impact?		X
If Yes, list affected DMAs:		
…have measured in-situ infiltration rates of less than 1.6 inches / hour?	X	
If Yes, list affected DMAs:		
…have significant cut and/or fill conditions that would preclude in-situ testing of infiltration rates at the final infiltration surface?		X
If Yes, list affected DMAs:		
…geotechnical report identify other site-specific factors that would preclude effective and safe infiltration?		X
Describe here:		

If you answered "Yes" to any of the questions above for any DMA, Infiltration BMPs should not be used for those DMAs and you should proceed to the assessment for Harvest and Use below.

D.2 Harvest and Use Assessment

Please check what applies*:*

☐ Reclaimed water will be used for the non-potable water demands for the project.

☐Downstream water rights may be impacted by Harvest and Use as approved by the Regional Board (verify with the Copermittee).

☐The Design Capture Volume will be addressed using Infiltration Only BMPs. In such a case, Harvest and Use BMPs are still encouraged, but it would not be required if the Design Capture Volume will be infiltrated or evapotranspired.

If any of the above boxes have been checked, Harvest and Use BMPs need not be assessed for the site. If none of the above criteria applies, follow the steps below to assess the feasibility of irrigation use, toilet use and other non-potable uses (e.g., industrial use).

Irrigation Use Feasibility

Complete the following steps to determine the feasibility of harvesting stormwater runoff for Irrigation Use BMPs on your site:

Step 1: Identify the total area of irrigated landscape on the site, and the type of landscaping used.

Total Area of Irrigated Landscape: 0.86

Type of Landscaping (Conservation Design or Active Turf): Conservation Design

Step 2: Identify the planned total of all impervious areas on the proposed project from which runoff might be feasibly captured and stored for irrigation use. Depending on the configuration of buildings and other impervious areas on the site, you may consider the site as a whole, or parts of the site, to evaluate reasonable scenarios for capturing and storing runoff and directing the stored runoff to the potential use(s) identified in Step 1 above.

Total Area of Impervious Surfaces: 3.14

Step 3: Cross reference the Design Storm depth for the project site (see Exhibit A of the WQMP Guidance Document) with the left column of Table 2-3 in Chapter 2 to determine the minimum area of Effective Irrigated Area per Tributary Impervious Area (EIATIA).

Enter your EIATIA factor: 1.85

Step 4: Multiply the unit value obtained from Step 3 by the total of impervious areas from Step 2 to develop the minimum irrigated area that would be required.

Minimum required irrigated area: 5.81

Step 5: Determine if harvesting stormwater runoff for irrigation use is feasible for the project by comparing the total area of irrigated landscape (Step 1) to the minimum required irrigated area (Step 4).

Minimum required irrigated area (Step 4)	Available Irrigated Landscape (Step 1)
5.81	0.86

Toilet Use Feasibility

Complete the following steps to determine the feasibility of harvesting stormwater runoff for toilet flushing uses on your site:

Step 1: Identify the projected total number of daily toilet users during the wet season, and account for any periodic shut downs or other lapses in occupancy:

Projected Number of Daily Toilet Users: 4

Project Type: Commercial

Step 2: Identify the planned total of all impervious areas on the proposed project from which runoff might be feasibly captured and stored for toilet use. Depending on the configuration of buildings and other impervious areas on the site, you may consider the site as a whole, or parts of the site, to evaluate reasonable scenarios for capturing and storing runoff and directing the stored runoff to the potential use(s) identified in Step 1 above.

Total Area of Impervious Surfaces: 3.14

Step 3: Enter the Design Storm depth for the project site (see Exhibit A) into the left column of Table 2-2 in Chapter 2 to determine the minimum number or toilet users per tributary impervious acre (TUTIA).

Enter your TUTIA factor: 167

Step 4: Multiply the unit value obtained from Step 3 by the total of impervious areas from Step 2 to develop the minimum number of toilet users that would be required.

Minimum number of toilet users: 524

Step 5: Determine if harvesting stormwater runoff for toilet flushing use is feasible for the project by comparing the Number of Daily Toilet Users (Step 1) to the minimum required number of toilet users (Step 4).

Minimum required Toilet Users (Step 4)	Projected number of toilet users (Step 1)
524	4

Other Non-Potable Use Feasibility

Are there other non-potable uses for stormwater runoff on the site (e.g. industrial use)? See Chapter 2 of the Guidance for further information. If yes, describe below. If no, write N/A.

N/A

Step 1: Identify the projected average daily non-potable demand, in gallons per day, during the wet season and accounting for any periodic shut downs or other lapses in occupancy or operation.

Average Daily Demand:

Step 2: Identify the planned total of all impervious areas on the proposed project from which runoff might be feasibly captured and stored for the identified non-potable use. Depending on the configuration of buildings and other impervious areas on the site, you may consider the site as a whole, or parts of the site, to evaluate reasonable scenarios for capturing and storing runoff and directing the stored runoff to the potential use(s) identified in Step 1 above.

Total Area of Impervious Surfaces:

Step 3: Enter the Design Storm depth for the project site (see Exhibit A) into the left column of Table 2-4 in Chapter 2 to determine the minimum demand for non-potable uses per tributary impervious acre.

Enter the factor from Table 2-4:

Step 4: Multiply the unit value obtained from Step 3 by the total of impervious areas from Step 2 to develop the minimum number of gallons per day of non-potable use that would be required.

Minimum required use:

Step 5: Determine if harvesting stormwater runoff for other non-potable use is feasible for the project by comparing the projected average daily use (Step 1) to the minimum required non-potable use (Step 4).

Minimum required non-potable use (Step 4)	**Projected average daily use (Step 1)**

If Irrigation, Toilet and Other Use feasibility anticipated demands are less than the applicable minimum values, Harvest and Use BMPs are not required and you should proceed to utilize LID Bioretention and Biotreatment per Section 3.4.2 of the WQMP Guidance Document.

D.3 Bioretention and Biotreatment Assessment

Other LID Bioretention and Biotreatment BMPs as described in Chapter 2.4.7 of the WQMP Guidance Document are feasible on nearly all development sites with sufficient advance planning.

Select one of the following:

X LID Bioretention/Biotreatment BMPs will be used for some or all DMAs of the project as noted below in Section D.4 (note the requirements of Section 3.4.2 in the WQMP Guidance Document).

☐ A site-specific analysis demonstrating the technical infeasibility of all LID BMPs has been performed and is included in Appendix 5. If you plan to submit an analysis demonstrating the technical infeasibility of LID BMPs, request a pre-submittal meeting with the Copermittee to discuss this option. Proceed to Section E to document your alternative compliance measures.

D.4 Feasibility Assessment Summaries

From the Infiltration, Harvest and Use, Bioretention and Biotreatment Sections above, complete Table D.2 below to summarize which LID BMPs are technically feasible, and which are not, based upon the established hierarchy.

Table D.2 LID Prioritization Summary Matrix

DMA Name/ID	LID BMP Hierarchy				No LID (Alternative Compliance)
	1. Infiltration	2. Harvest and use	3. Bioretention	4. Biotreatment	
DMA1 A/1	☐	☐	☒	☐	☐
DMA1 D/1	☐	☐	☒	☐	☐
DMA1 D/2	☐	☐	☒	☐	☐
DMA2 A/1	☐	☐	☒	☐	☐
DMA2 D/1	☐	☐	☒	☐	☐
DMA2 D/2	☐	☐	☒	☐	☐

D.5 LID BMP Sizing

Each LID BMP must be designed to ensure that the Design Capture Volume will be addressed by the selected BMPs. First**,** calculate the Design Capture Volume for each LID BMP using the V_{BMP} worksheet in Appendix F of the LID BMP Design Handbook. Second**,** design the LID BMP to meet the required V_{BMP} using a method approved by the Copermittee. Utilize the worksheets found in the LID BMP Design Handbook or consult with your Copermittee to assist you in correctly sizing your LID BMPs. Complete Table D.3 below to document the Design Capture Volume and the Proposed Volume for each LID BMP. Provide the completed design procedure sheets for each LID BMP in Appendix 6. You may add additional rows to the table below as needed.

Table D.3 DCV Calculations for LID BMPs

DMA Type/ID	DMA Area (square feet)	Post-Project Surface Type	Effective Impervious Fraction, I_f	DMA Runoff Factor	DMA Areas x Runoff Factor	*BIORETENTION 1*		
	[A]		[B]	[C]	[A] x [C]			
DMA1-A/1	*10939*	*Landscaping*	*0.1*	*0.11*	*1208.3*	*Design Storm Depth (in)*	*Design Capture Volume, V_{BMP} (cubic feet)*	*Proposed Volume on Plans (cubic feet)*
DMA1-D/1	*39571*	*Concrete or Asphalt*	*1*	*0.89*	*35297.3*			
DMA1-D/2	*4726*	*Roofs*	*1*	*0.89*	*4215.6*			
	55,236				40,721.2	0.80	2,714.7	2,898

[B], [C] is obtained as described in Section 2.3.1 of the WQMP Guidance Document

[E] is obtained from Exhibit A in the WQMP Guidance Document

[G] is obtained from a design procedure sheet, such as in LID BMP Design Handbook and placed in Appendix 6

Table D.4 DCV Calculations for LID BMPs

DMA Type/ID	DMA Area (square feet)	Post-Project Surface Type	Effective Impervious Fraction, I_f	DMA Runoff Factor	DMA Areas x Runoff Factor	*BIORETENTION 2 & 3*		
	[A]		[B]	[C]	[A] x [C]			
DMA2-A/1	*15488*	*Landscaping*	*0.1*	*0.11*	*1710.8*	*Design Storm Depth (in)*	*Design Capture Volume, V_{BMP} (cubic feet)*	*Proposed Volume on Plans (cubic feet)*

DMA2-D/2	*10719*	*Roofs*	*1*	*0.89*	*9561.3*			
	107,990				84,222.5	0.80	5614.8	6,877

[B], [C] is obtained as described in Section 2.3.1 of the WQMP Guidance Document

[E] is obtained from Exhibit A in the WQMP Guidance Document

[G] is obtained from a design procedure sheet, such as in LID BMP Design Handbook and placed in Appendix 6

Section E: Alternative Compliance (LID Waiver Program)

LID BMPs are expected to be feasible on virtually all projects. Where LID BMPs have been demonstrated to be infeasible as documented in Section D, other Treatment Control BMPs must be used (subject to LID waiver approval by the Copermittee). Check one of the following Boxes:

X LID Principles and LID BMPs have been incorporated into the site design to fully address all Drainage Management Areas. No alternative compliance measures are required for this project and thus this Section is not required to be completed.

- *Or* -

☐ The following Drainage Management Areas are unable to be addressed using LID BMPs. A site-specific analysis demonstrating technical infeasibility of LID BMPs has been approved by the Co-Permittee and included in Appendix 5. Additionally, no downstream regional and/or sub-regional LID BMPs exist or are available for use by the project. The following alternative compliance measures on the following pages are being implemented to ensure that any pollutant loads expected to be discharged by not incorporating LID BMPs, are fully mitigated.

E.1 Identify Pollutants of Concern

Utilizing Table A.1 from Section A above which noted your project's receiving waters and their associated EPA approved 303(d) listed impairments, cross reference this information with that of your selected Priority Development Project Category in Table E.1 below. If the identified General Pollutant Categories are the same as those listed for your receiving waters, then these will be your Pollutants of Concern and the appropriate box or boxes will be checked on the last row. The purpose of this is to document compliance and to help you appropriately plan for mitigating your Pollutants of Concern in lieu of implementing LID BMPs.

Table E.1 Potential Pollutants by Land Use Type

Priority Development Project Categories and/or Project Features (check those that apply)	General Pollutant Categories							
	Bacterial Indicators	Metals	Nutrients	Pesticides	Toxic Organic Compounds	Sediments	Trash & Debris	Oil & Grease
☐ Detached Residential Development	P	N	P	P	N	P	P	P
☐ Attached Residential Development	P	N	P	P	N	P	P	P(2)
☒ Commercial/Industrial Development	P(3)	P	P(1)	P(1)	P(5)	P(1)	P	P
☐ Automotive Repair Shops	N	P	N	N	P(4, 5)	N	P	P
☐ Restaurants (>5,000 ft^2)	P	N	N	N	N	N	P	P
☐ Hillside Development (>5,000 ft^2)	P	N	P	P	N	P	P	P
☐ Parking Lots (>5,000 ft^2)	P(6)	P	P(1)	P(1)	P(4)	P(1)	P	P
☐ Retail Gasoline Outlets	N	P	N	N	P	N	P	P
Project Priority Pollutant(s) of Concern	☐	☐	☐	☐	☐	☐	☐	☐

P = Potential

N = Not Potential

(1) A potential Pollutant if non-native landscaping exists or is proposed onsite; otherwise not expected

(2) A potential Pollutant if the project includes uncovered parking areas; otherwise not expected

(3) A potential Pollutant is land use involving animal waste

(4) Specifically petroleum hydrocarbons

(5) Specifically solvents

(6) Bacterial indicators are routinely detected in pavement runoff

E.2 Stormwater Credits

Projects that cannot implement LID BMPs but nevertheless implement smart growth principles are potentially eligible for Stormwater Credits. Utilize Table 3-8 within the WQMP Guidance Document to identify your Project Category and its associated Water Quality Credit. If not applicable, write N/A.

Table E.2 Water Quality Credits

Qualifying Project Categories	Credit Percentage[2]
N/A	
Total Credit Percentage[1]	

[1] *Cannot Exceed 50%*
[2] *Obtain corresponding data from Table 3-8 in the WQMP Guidance Document*

E.3 Sizing Criteria

After you appropriately considered Stormwater Credits for your project, utilize Table E.3 below to appropriately size them to the DCV, or Design Flow Rate, as applicable. Please reference Chapter 3.5.2 of the WQMP Guidance Document for further information.

Table E.3 Treatment Control BMP Sizing

DMA Type/ID	**DMA Area (square feet)**	**Post-Project Surface Type**	**Effective Impervious Fraction, I_f**	**DMA Runoff Factor**	**DMA Area x Runoff Factor**		***Enter BMP Name / Identifier Here***		
	[A]		[B]	[C]	[A] x [C]				
N/A						*Design Storm Depth (in)*	*Minimum Design Capture Volume or Design Flow Rate (cubic feet or cfs)*	*Total Storm Water Credit % Reduction*	*Proposed Volume or Flow on Plans (cubic feet or cfs)*
	A_T = Σ[A]				Σ= [D]	[E]	$[F] = \frac{[D]x[E]}{[G]}$	[F] X (1-[H])	[I]

[B], [C] is obtained as described in Section 2.3.1 from the WQMP Guidance Document
[E] is for Flow-Based Treatment Control BMPs [E] = .2, for Volume-Based Control Treatment BMPs, [E] obtained from Exhibit A in the WQMP Guidance Document
[G] is for Flow-Based Treatment Control BMPs [G] = 43,560, for Volume-Based Control Treatment BMPs, [G] = 12
[H] is from the Total Credit Percentage as Calculated from Table E.2 above
[I] as obtained from a design procedure sheet from the BMP manufacturer and should be included in Appendix 6

E.4 Treatment Control BMP Selection

Treatment Control BMPs typically provide proprietary treatment mechanisms to treat potential pollutants in runoff, but do not sustain significant biological processes. Treatment Control BMPs must have a removal efficiency of a medium or high effectiveness as quantified below:

- **High**: equal to or greater than 80% removal efficiency
- **Medium**: between 40% and 80% removal efficiency

Such removal efficiency documentation (e.g., studies, reports, etc.) as further discussed in Chapter 3.5.2 of the WQMP Guidance Document, must be included in Appendix 6. In addition, ensure that proposed Treatment Control BMPs are properly identified on the WQMP Site Plan in Appendix 1.

Table E.4 Treatment Control BMP Selection

Selected Treatment Control BMP Name or ID[1]	Priority Pollutant(s) of Concern to Mitigate[2]	Removal Efficiency Percentage[3]
DMA1 A/1, D/1, D/2	Bacteria Indicators, Nutrients, Pesticides, Sediments, Trash & Debris, Oil & Grease	80%
DMA2 A/1, D/1, D/2	Bacteria Indicators, Nutrients, Pesticides, Sediments, Trash & Debris, Oil & Grease	80%

[1] *Treatment Control BMPs must not be constructed within Receiving Waters. In addition, a proposed Treatment Control BMP may be listed more than once if they possess more than one qualifying pollutant removal efficiency.*
[2] *Cross Reference Table E.1 above to populate this column.*
[3] *As documented in a Co-Permittee Approved Study and provided in Appendix 6.*

Section F: Hydromodification

F.1 Hydrologic Conditions of Concern (HCOC) Analysis

Once you have determined that the LID design is adequate to address water quality requirements, you will need to assess if the proposed LID Design may still create a HCOC. Review Chapters 2 and 3 (including Figure 3-7) of the WQMP Guidance Document to determine if your project must mitigate for Hydromodification impacts. If your project meets one of the following criteria which will be indicated by the check boxes below, you do not need to address Hydromodification at this time. However, if the project does not qualify for Exemptions 1, 2 or 3, then additional measures must be added to the design to comply with HCOC criteria. This is discussed in further detail below in Section F.2.

HCOC EXEMPTION 1: The Priority Development Project disturbs less than one acre. The Copermittee has the discretion to require a Project-Specific WQMP to address HCOCs on projects less than one acre on a case by case basis. The disturbed area calculation should include all disturbances associated with larger common plans of development.

Does the project qualify for this HCOC Exemption? ☐ Y ☒ N

If Yes, HCOC criteria do not apply.

HCOC EXEMPTION 2: The volume and time of concentration[1] of storm water runoff for the post-development condition is not significantly different from the pre-development condition for a 2-year return frequency storm (a difference of 5% or less is considered insignificant) using one of the following methods to calculate:

- Riverside County Hydrology Manual
- Technical Release 55 (TR-55): Urban Hydrology for Small Watersheds (NRCS 1986), or derivatives thereof, such as the Santa Barbara Urban Hydrograph Method
- Other methods acceptable to the Co-Permittee

Does the project qualify for this HCOC Exemption? ☐ Y ☒ N

If Yes, report results in Table F.1 below and provide your substantiated hydrologic analysis in Appendix 7.

Table F.1 Hydrologic Conditions of Concern Summary

	2 year – 24 hour		
	Pre-condition	**Post-condition**	**% Difference**
Time of Concentration			
Volume (Cubic Feet)			

[1] Time of concentration is defined as the time after the beginning of the rainfall when all portions of the drainage basin are contributing to flow at the outlet.

HCOC EXEMPTION 3: All downstream conveyance channels to an adequate sump (for example, Prado Dam, Lake Elsinore, Canyon Lake, Santa Ana River, or other lake, reservoir or naturally erosion resistant feature) that will receive runoff from the project are engineered and regularly maintained to ensure design flow capacity; no sensitive stream habitat areas will be adversely affected; or are not identified on the Co-Permittees Hydromodification Susceptibility Maps.

Does the project qualify for this HCOC Exemption? ☐ Y ☒ N

If Yes, HCOC criteria do not apply and note below which adequate sump applies to this HCOC qualifier:

F.2 HCOC Mitigation

If none of the above HCOC Exemption Criteria are applicable, HCOC criteria is considered mitigated if they meet one of the following conditions:

a. Additional LID BMPS are implemented onsite or offsite to mitigate potential erosion or habitat impacts as a result of HCOCs. This can be conducted by an evaluation of site-specific conditions utilizing accepted professional methodologies published by entities such as the California Stormwater Quality Association (CASQA), the Southern California Coastal Water Research Project (SCCRWP), or other Co-Permittee approved methodologies for site-specific HCOC analysis.

b. The project is developed consistent with an approved Watershed Action Plan that addresses HCOC in Receiving Waters.

c. Mimicking the pre-development hydrograph with the post-development hydrograph, for a 2-year return frequency storm. Generally, the hydrologic conditions of concern are not significant, if the post-development hydrograph is no more than 10% greater than pre-development hydrograph. In cases where excess volume cannot be infiltrated or captured and reused, discharge from the site must be limited to a flow rate no greater than 110% of the pre-development 2-year peak flow.

Be sure to include all pertinent documentation used in your analysis of the items a, b or c in Appendix 7.

Section G: Source Control BMPs

Source control BMPs include permanent, structural features that may be required in your project plans — such as roofs over and berms around trash and recycling areas — and Operational BMPs, such as regular sweeping and "housekeeping", that must be implemented by the site's occupant or user. The MEP standard typically requires both types of BMPs. In general, Operational BMPs cannot be substituted for a feasible and effective permanent BMP. Using the Pollutant Sources/Source Control Checklist in Appendix 8, review the following procedure to specify Source Control BMPs for your site:

1. ***Identify Pollutant Sources*:** Review Column 1 in the Pollutant Sources/Source Control Checklist. Check off the potential sources of Pollutants that apply to your site.

2. ***Note Locations on Project-Specific WQMP Exhibit*:** Note the corresponding requirements listed in Column 2 of the Pollutant Sources/Source Control Checklist. Show the location of each Pollutant source and each permanent Source Control BMP in your Project-Specific WQMP Exhibit located in Appendix 1.

3. ***Prepare a Table and Narrative*:** Check off the corresponding requirements listed in Column 3 in the Pollutant Sources/Source Control Checklist. In the left column of Table G.1 below, list each potential source of runoff Pollutants on your site (from those that you checked in the Pollutant Sources/Source Control Checklist). In the middle column, list the corresponding permanent, Structural Source Control BMPs (from Columns 2 and 3 of the Pollutant Sources/Source Control Checklist) used to prevent Pollutants from entering runoff. **Add additional narrative** in this column that explains any special features, materials or methods of construction that will be used to implement these permanent, Structural Source Control BMPs.

4. ***Identify Operational Source Control BMPs:*** To complete your table, refer once again to the Pollutant Sources/Source Control Checklist. List in the right column of your table the Operational BMPs that should be implemented as long as the anticipated activities continue at the site. Copermittee stormwater ordinances require that applicable Source Control BMPs be implemented; the same BMPs may also be required as a condition of a use permit or other revocable Discretionary Approval for use of the site.

Table G.1 Permanent and Operational Source Control Measures

Potential Sources of Runoff pollutants	Permanent Structural Source Control BMPs	Operational Source Control BMPs
Sidewalks and Parking Lot - bacteria, oils, trash and debris	Landscaped (Self Treating) Areas	Sweep sidewalks, parking lots regularly to prevent accumulation of litter and debris. Collect debris from pressure washing to prevent entry into the storm drain system. Collect washwater containing any cleaning agent or degreaser and discharge to the sanitary sewer not to a storm drain.

Landscape - Nutrients and Pesticide	Landscaped (Self Treating) Areas	Evaluate and remove any dead or diseased vegetation twice a year. Prune, weed, and replace mulch as necessary.

Section H: Construction Plan Checklist

Populate Table H.1 below to assist the plan checker in an expeditious review of your project. The first two columns will contain information that was prepared in previous steps, while the last column will be populated with the corresponding plan sheets. This table is to be completed with the submittal of your final Project-Specific WQMP.

Table H.1 Construction Plan Cross-reference

BMP No. or ID	BMP Identifier and Description	Corresponding Plan Sheet(s)	BMP Location (Lat/Long)
1	Bioretention	WQMP Site Plan	33.993686, -117.060409
2	Bioretention	WQMP Site Plan	33.993686, -117.060409
3	Bioretention	WQMP Site Plan	33.993686, -117.060409

Note that the updated table — or Construction Plan WQMP Checklist — is **only a reference tool** to facilitate an easy comparison of the construction plans to your Project-Specific WQMP. Co-Permittee staff can advise you regarding the process required to propose changes to the approved Project-Specific WQMP.

Section I: Operation, Maintenance and Funding

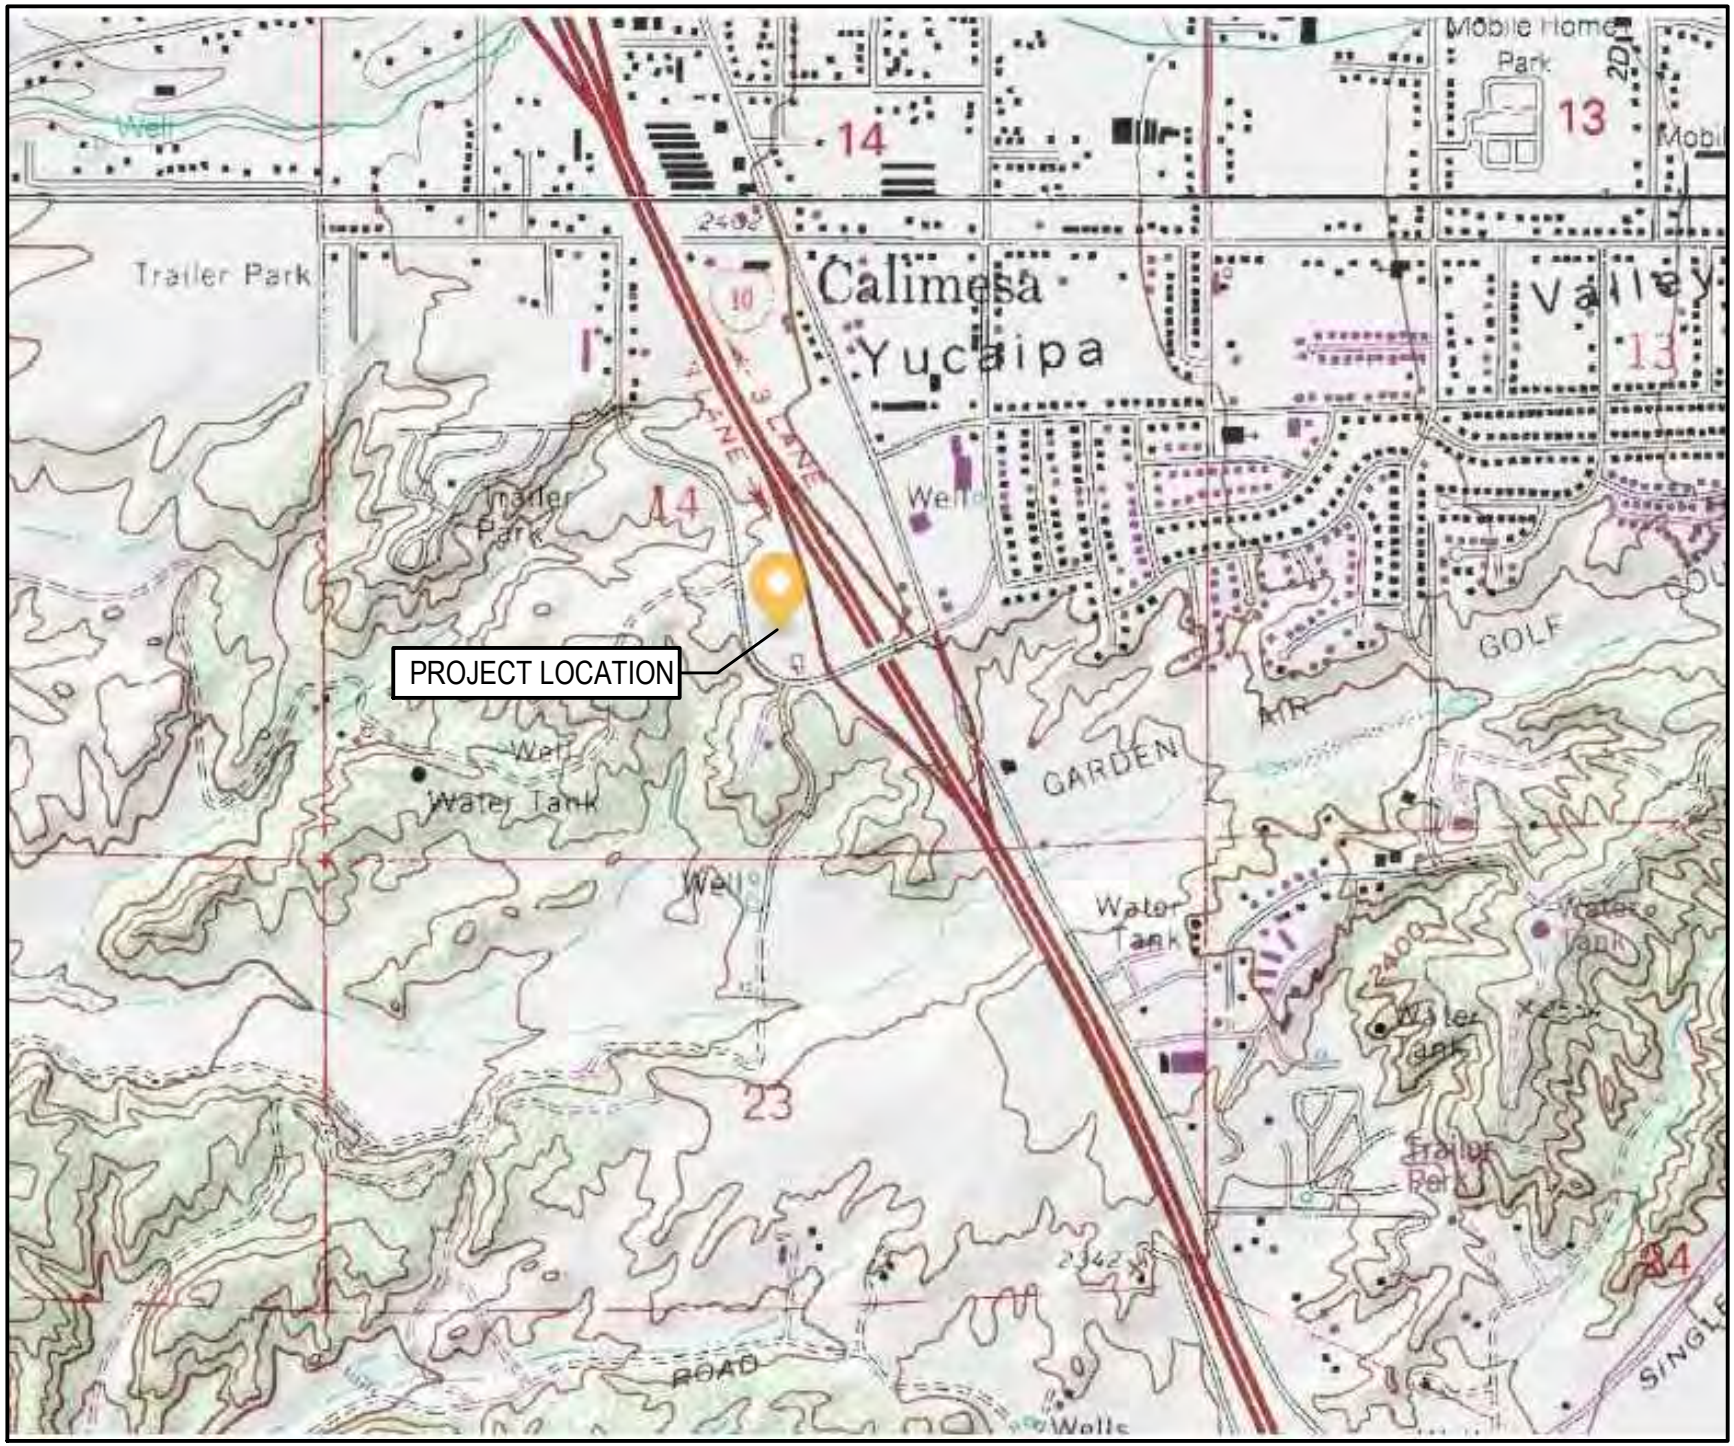
The Copermittee will periodically verify that Stormwater BMPs on your site are maintained and continue to operate as designed. To make this possible, your Copermittee will require that you include in Appendix 9 of this Project-Specific WQMP:

1. A means to finance and implement facility maintenance in perpetuity, including replacement cost.
2. Acceptance of responsibility for maintenance from the time the BMPs are constructed until responsibility for operation and maintenance is legally transferred. A warranty covering a period following construction may also be required.
3. An outline of general maintenance requirements for the Stormwater BMPs you have selected.
4. Figures delineating and designating pervious and impervious areas, location, and type of Stormwater BMP, and tables of pervious and impervious areas served by each facility. Geo-locating the BMPs using a coordinate system of latitude and longitude is recommended to help facilitate a future statewide database system.
5. A separate list and location of self-retaining areas or areas addressed by LID Principles that do not require specialized O&M or inspections but will require typical landscape maintenance as noted in Chapter 5, pages 85-86, in the WQMP Guidance. Include a brief description of typical landscape maintenance for these areas.

Your local Co-Permittee will also require that you prepare and submit a detailed Stormwater BMP Operation and Maintenance Plan that sets forth a maintenance schedule for each of the Stormwater BMPs built on your site. An agreement assigning responsibility for maintenance and providing for inspections and certification may also be required.

Details of these requirements and instructions for preparing a Stormwater BMP Operation and Maintenance Plan are in Chapter 5 of the WQMP Guidance Document.

Maintenance Mechanism:



Will the proposed BMPs be maintained by a Home Owners' Association (HOA) or Property Owners Association (POA)?

☒ Y ☐ N

Include your Operation and Maintenance Plan and Maintenance Mechanism in Appendix 9. Additionally, include all pertinent forms of educational materials for those personnel that will be maintaining the proposed BMPs within this Project-Specific WQMP in Appendix 10.

Design Volume

Enter the area tributary to this feature	A_{TRIB}=	1.27	acres
Enter V_{BMP} determined from Section 4.3 of this Handbook	V_{BMP}=	2,715	ft^3

Type of Bioretention Facility Design

○ Side slopes required (parallel to parking spaces or adjacent to walkways)

◉ No side slopes required (perpendicular to parking space or Planter Boxes)

Bioretention Facility Surface Area

Depth of Soil Filter Media Layer	d_S =	3.0	ft
Top Width of Bioretention Facility, excluding curb	w_T =	6.0	ft
Total Effective Depth, d_E			
$d_E = [(0.3) \times d_S + (0.4) \times 1] + 0.5$	d_E =	1.80	ft
Minimum Surface Area, A_m			
$A_M\ (ft^2) = \frac{V_{BMP}\ (ft^3)}{d_E\ (ft)}$	A_M =	1,509	ft^2
Proposed Surface Area	A=	1,613	ft^2
Minimum Required Length of Landscaped Retention Facility, L	L =	251.5	ft

Bioretention Facility Properties

Side Slopes in Bioretention Facility	z =		:1
Diameter of Underdrain			inches
Longitudinal Slope of Site (3% maximum)			%
6" Check Dam Spacing			feet

Describe Landscaping:

Notes:

Bioretention Facility - Design Procedure (Rev. 06-2014)	BMP ID 2 and 3	Legend:	Required Entries / Calculated Cells

Company Name: Gil Zulueta Mendoza Associates, Inc. Date: 2/15/2021

Designed by: Gil Mendoza County/City Case No.: Calimesa

Design Volume

Enter the area tributary to this feature	A_{TRIB} =	2.48	acres
Enter V_{BMP} determined from Section 4.3 of this Handbook	V_{BMP} =	5,615	ft^3

Type of Bioretention Facility Design

○ Side slopes required (parallel to parking spaces or adjacent to walkways)

◉ No side slopes required (perpendicular to parking space or Planter Boxes)

Bioretention Facility Surface Area

Depth of Soil Filter Media Layer	d_S =	3.0	ft
Top Width of Bioretention Facility, excluding curb	w_T =	6.0	ft

Appendix 7: Hydromodification

Supporting Detail Relating to Hydrologic Conditions of Concern

Appendix 8: Source Control

Pollutant Sources/Source Control Checklist

STORMWATER POLLUTANT SOURCES/SOURCE CONTROL CHECKLIST

How to use this worksheet (also see instructions in Section G of the WQMP Template):

1. Review Column 1 and identify which of these potential sources of stormwater pollutants apply to your site. Check each box that applies.
2. Review Column 2 and incorporate all of the corresponding applicable BMPs in your WQMP Exhibit.
3. Review Columns 3 and 4 and incorporate all of the corresponding applicable permanent controls and operational BMPs in your WQMP. Use the format shown in Table G.1on page 23 of this WQMP Template. Describe your specific BMPs in an accompanying narrative, and explain any special conditions or situations that required omitting BMPs or substituting alternative BMPs for those shown here.

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
❑ A. **On-site storm drain inlets**	❑ **Locations of inlets.**	❑ **Mark all inlets with the words "Only Rain Down the Storm Drain" or similar. Catch Basin Markers may be available from the Riverside County Flood Control and Water Conservation District, call 951.955.1200 to verify.**	❑ **Maintain and periodically repaint or replace inlet markings.** ❑ **Provide stormwater pollution prevention information to new site owners, lessees, or operators.** ❑ **See applicable operational BMPs in Fact Sheet SC-44, "Drainage System Maintenance," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com** ❑ **Include the following in lease agreements: "Tenant shall not allow anyone to discharge anything to storm drains or to store or deposit materials so as to create a potential discharge to storm drains."**
❑ B. **Interior floor drains and elevator shaft sump pumps**		❑ **State that interior floor drains and elevator shaft sump pumps will be plumbed to sanitary sewer.**	❑ **Inspect and maintain drains to prevent blockages and overflow.**
❑ C. **Interior parking garages**		❑ **State that parking garage floor drains will be plumbed to the sanitary sewer.**	❑ **Inspect and maintain drains to prevent blockages and overflow.**

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
☐ D1. **Need for future indoor & structural pest control**		☐ **Note building design features that discourage entry of pests.**	☐ **Provide Integrated Pest Management information to owners, lessees, and operators.**
☒ D2. **Landscape/ Outdoor Pesticide Use**	☐ **Show locations of native trees or areas of shrubs and ground cover to be undisturbed and retained.** ☐ **Show self-retaining landscape areas, if any.** ☐ **Show stormwater treatment and hydrograph modification management BMPs. (See instructions in Chapter 3, Step 5 and guidance in Chapter 5.)**	**State that final landscape plans will accomplish all of the following.** ☐ **Preserve existing native trees, shrubs, and ground cover to the maximum extent possible.** ☐ **Design landscaping to minimize irrigation and runoff, to promote surface infiltration where appropriate, and to minimize the use of fertilizers and pesticides that can contribute to stormwater pollution.** ☐ **Where landscaped areas are used to retain or detain stormwater, specify plants that are tolerant of saturated soil conditions.** ☐ **Consider using pest-resistant plants, especially adjacent to hardscape.** **To insure successful establishment, select plants appropriate to site soils, slopes, climate, sun, wind, rain, land use, air movement, ecological consistency, and plant interactions.**	☐ **Maintain landscaping using minimum or no pesticides.** ☐ **See applicable operational BMPs in "What you should know for…..Landscape and Gardening"** at http://rcflood.org/stormwater/**Error! Hyperlink reference not valid.** ☐ **Provide IPM information to new owners, lessees and operators.**

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
❑ E. **Pools, spas, ponds, decorative fountains, and other water features.**	❑ **Show location of water feature and a sanitary sewer cleanout in an accessible area within 10 feet. (Exception: Public pools must be plumbed according to County Department of Environmental Health Guidelines.)**	**If the Co-Permittee requires pools to be plumbed to the sanitary sewer, place a note on the plans and state in the narrative that this connection will be made according to local requirements.**	❑ **See applicable operational BMPs in** "Guidelines for Maintaining Your Swimming Pool, Jacuzzi and Garden Fountain" at http://rcflood.org/stormwater/
❑ F. **Food service**	❑ **For restaurants, grocery stores, and other food service operations, show location (indoors or in a covered area outdoors) of a floor sink or other area for cleaning floor mats, containers, and equipment.** ❑ **On the drawing, show a note that this drain will be connected to a grease interceptor before discharging to the sanitary sewer.**	❑ **Describe the location and features of the designated cleaning area.** ❑ **Describe the items to be cleaned in this facility and how it has been sized to insure that the largest items can be accommodated.**	❑ **See the brochure, "**The Food Service Industry Best Management Practices for: Restaurants, Grocery Stores, Delicatessens and Bakeries" at http://rcflood.org/stormwater/ **Provide this brochure to new site owners, lessees, and operators.**
❑ G. **Refuse areas**	❑ **Show where site refuse and recycled materials will be handled and stored for pickup. See local municipal requirements for sizes and other details of refuse areas.** ❑ **If dumpsters or other receptacles are outdoors, show how the designated area will be covered, graded, and paved to prevent run-on and show locations of berms to prevent runoff from the area.** ❑ **Any drains from dumpsters, compactors, and tallow bin areas shall be connected to a grease removal device before discharge to sanitary sewer.**	❑ **State how site refuse will be handled and provide supporting detail to what is shown on plans.** ❑ **State that signs will be posted on or near dumpsters with the words "Do not dump hazardous materials here" or similar.**	❑ **State how the following will be implemented:** **Provide adequate number of receptacles. Inspect receptacles regularly; repair or replace leaky receptacles. Keep receptacles covered. Prohibit/prevent dumping of liquid or hazardous wastes. Post "no hazardous materials" signs. Inspect and pick up litter daily and clean up spills immediately. Keep spill control materials available on-site. See Fact Sheet SC-34, "Waste Handling and Disposal" in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com**

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
❑ H. **Industrial processes.**	❑ **Show process area.**	❑ **If industrial processes are to be located on site, state: "All process activities to be performed indoors. No processes to drain to exterior or to storm drain system."**	❑ **See Fact Sheet SC-10, "Non-Stormwater Discharges" in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com** See the brochure "Industrial & Commercial Facilities Best Management Practices for: Industrial, Commercial Facilities" at http://rcflood.org/stormwater/

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
❑ I. **Outdoor storage of equipment or materials. (See rows J and K for source control measures for vehicle cleaning, repair, and maintenance.)**	❑ **Show any outdoor storage areas, including how materials will be covered. Show how areas will be graded and bermed to prevent run-on or run-off from area.** ❑ **Storage of non-hazardous liquids shall be covered by a roof and/or drain to the sanitary sewer system, and be contained by berms, dikes, liners, or vaults.** ❑ **Storage of hazardous materials and wastes must be in compliance with the local hazardous materials ordinance and a Hazardous Materials Management Plan for the site.**	**Include a detailed description of materials to be stored, storage areas, and structural features to prevent pollutants from entering storm drains.** **Where appropriate, reference documentation of compliance with the requirements of Hazardous Materials Programs for:** ▪ **Hazardous Waste Generation** ▪ **Hazardous Materials Release Response and Inventory** ▪ **California Accidental Release (CalARP)** ▪ **Aboveground Storage Tank** ▪ **Uniform Fire Code Article 80 Section 103(b) & (c) 1991** ▪ **Underground Storage Tank** **www.cchealth.org/groups/hazmat/**	❑ **See the Fact Sheets SC-31, "Outdoor Liquid Container Storage" and SC-33, "Outdoor Storage of Raw Materials " in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com**

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
❑ J. **Vehicle and Equipment Cleaning**	❑ **Show on drawings as appropriate:** **(1) Commercial/industrial facilities having vehicle/equipment cleaning needs shall either provide a covered, bermed area for washing activities or discourage vehicle/equipment washing by removing hose bibs and installing signs prohibiting such uses.** **(2) Multi-dwelling complexes shall have a paved, bermed, and covered car wash area (unless car washing is prohibited on-site and hoses are provided with an automatic shut-off to discourage such use).** **(3) Washing areas for cars, vehicles, and equipment shall be paved, designed to prevent run-on to or runoff from the area, and plumbed to drain to the sanitary sewer.** **(4) Commercial car wash facilities shall be designed such that no runoff from the facility is discharged to the storm drain system. Wastewater from the facility shall discharge to the sanitary sewer, or a wastewater reclamation system shall be installed.**	❑ **If a car wash area is not provided, describe any measures taken to discourage on-site car washing and explain how these will be enforced.**	**Describe operational measures to implement the following (if applicable):** ❑ **Washwater from vehicle and equipment washing operations shall not be discharged to the storm drain system.** Refer to "Outdoor Cleaning Activities and Professional Mobile Service Providers" for many of the Potential Sources of Runoff Pollutants categories below. Brochure can be found at http://rcflood.org/stormwater/ ❑**Car dealerships and similar may rinse cars with water only.**

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
❑ K. **Vehicle/Equipment Repair and Maintenance**	❑ **Accommodate all vehicle equipment repair and maintenance indoors. Or designate an outdoor work area and design the area to prevent run-on and runoff of stormwater.** ❑ **Show secondary containment for exterior work areas where motor oil, brake fluid, gasoline, diesel fuel, radiator fluid, acid-containing batteries or other hazardous materials or hazardous wastes are used or stored. Drains shall not be installed within the secondary containment areas.** ❑ **Add a note on the plans that states either (1) there are no floor drains, or (2) floor drains are connected to wastewater pretreatment systems prior to discharge to the sanitary sewer and an industrial waste discharge permit will be obtained.**	❑ **State that no vehicle repair or maintenance will be done outdoors, or else describe the required features of the outdoor work area.** ❑ **State that there are no floor drains or if there are floor drains, note the agency from which an industrial waste discharge permit will be obtained and that the design meets that agency's requirements.** ❑ **State that there are no tanks, containers or sinks to be used for parts cleaning or rinsing or, if there are, note the agency from which an industrial waste discharge permit will be obtained and that the design meets that agency's requirements.**	**In the Stormwater Control Plan, note that all of the following restrictions apply to use the site:** ❑ **No person shall dispose of, nor permit the disposal, directly or indirectly of vehicle fluids, hazardous materials, or rinsewater from parts cleaning into storm drains.** ❑ **No vehicle fluid removal shall be performed outside a building, nor on asphalt or ground surfaces, whether inside or outside a building, except in such a manner as to ensure that any spilled fluid will be in an area of secondary containment. Leaking vehicle fluids shall be contained or drained from the vehicle immediately.** ❑ **No person shall leave unattended drip parts or other open containers containing vehicle fluid, unless such containers are in use or in an area of secondary containment.** Refer to "Automotive Maintenance & Car Care Best Management Practices for Auto Body Shops, Auto Repair Shops, Car Dealerships, Gas Stations and Fleet Service Operations". Brochure can be found at http://rcflood.org/stormwater/ Refer to Outdoor Cleaning Activities and Professional Mobile Service Providers for many of the Potential Sources of Runoff Pollutants categories below. Brochure can be found at http://rcflood.org/stormwater/

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
❑ L. **Fuel Dispensing Areas**	❑ **Fueling areas[6] shall have impermeable floors (i.e., portland cement concrete or equivalent smooth impervious surface) that are: a) graded at the minimum slope necessary to prevent ponding; and b) separated from the rest of the site by a grade break that prevents run-on of stormwater to the maximum extent practicable.** ❑ **Fueling areas shall be covered by a canopy that extends a minimum of ten feet in each direction from each pump. [Alternative: The fueling area must be covered and the cover's minimum dimensions must be equal to or greater than the area within the grade break or fuel dispensing area[1].] The canopy [or cover] shall not drain onto the fueling area.**		❑ **The property owner shall dry sweep the fueling area routinely.** ❑ **See the Fact Sheet SD-30 , "Fueling Areas" in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com**

[6] **The fueling area shall be defined as the area extending a minimum of 6.5 feet from the corner of each fuel dispenser or the length at which the hose and nozzle assembly may be operated plus a minimum of one foot, whichever is greater.**

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
❑ M. **Loading Docks**	❑ **Show a preliminary design for the loading dock area, including roofing and drainage. Loading docks shall be covered and/or graded to minimize run-on to and runoff from the loading area. Roof downspouts shall be positioned to direct stormwater away from the loading area. Water from loading dock areas shall be drained to the sanitary sewer, or diverted and collected for ultimate discharge to the sanitary sewer.** ❑ **Loading dock areas draining directly to the sanitary sewer shall be equipped with a spill control valve or equivalent device, which shall be kept closed during periods of operation.** ❑ **Provide a roof overhang over the loading area or install door skirts (cowling) at each bay that enclose the end of the trailer.**		❑ **Move loaded and unloaded items indoors as soon as possible.** ❑ **See Fact Sheet SC-30, "Outdoor Loading and Unloading," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com**

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
❑ N. **Fire Sprinkler Test Water**		❑ **Provide a means to drain fire sprinkler test water to the sanitary sewer.**	❑ **See the note in Fact Sheet SC-41, "Building and Grounds Maintenance," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com**
O. **Miscellaneous Drain or Wash Water or Other Sources** ❑ **Boiler drain lines** ❑ **Condensate drain lines** ❑ **Rooftop equipment** ❑ **Drainage sumps** ❑ **Roofing, gutters, and trim.** ❑ **Other sources**		❑ **Boiler drain lines shall be directly or indirectly connected to the sanitary sewer system and may not discharge to the storm drain system.** ❑ **Condensate drain lines may discharge to landscaped areas if the flow is small enough that runoff will not occur. Condensate drain lines may not discharge to the storm drain system.** ❑ **Rooftop equipment with potential to produce pollutants shall be roofed and/or have secondary containment.** ❑ **Any drainage sumps on-site shall feature a sediment sump to reduce the quantity of sediment in pumped water.** ❑ **Avoid roofing, gutters, and trim made of copper or other unprotected metals that may leach into runoff.** **Include controls for other sources as specified by local reviewer.**	

STORMWATER POLLUTANT SOURCES/SOURCE CONTROL CHECKLIST

IF THESE SOURCES WILL BE ON THE PROJECT SITE ...	... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE		
1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Show on WQMP Drawings	3 Permanent Controls—List in WQMP Table and Narrative	4 Operational BMPs—Include in WQMP Table and Narrative
☒ P. **Plazas, sidewalks, and parking lots.**			☐ **Sweep plazas, sidewalks, and parking lots regularly to prevent accumulation of litter and debris. Collect debris from pressure washing to prevent entry into the storm drain system. Collect washwater containing any cleaning agent or degreaser and discharge to the sanitary sewer not to a storm drain.**

Noise Modeling Results
Prepared by Dudek, August 2021

NOISE APPENDIX

Terminology & Definitions

ACCOUSTIC DEFINITIONS

Term	Definition
Ambient Noise Level	The composite of noise from all sources near and far. The normal or existing level of environmental noise at a given location.
A-Weighted Sound Level, (dB[A])	The sound pressure level in decibels as measured on a sound level meter using the A-weighted filter network. The A-weighting filter de-emphasizes the very low and very high frequency components of the sound in a manner similar to the frequency response of the human ear and correlates well with subjective reactions to noise.
Community Noise Equivalent Level, (CNEL)	CNEL is the A-weighted equivalent continuous sound exposure level for a 24-hour period with a ten dB adjustment added to sound levels occurring during nighttime hours (10 pm to 7 am) and a five dB adjustment added to the sound levels occurring during the evening hours (7 pm to 10 pm).
Decibel, (dB)	A unit for measuring sound pressure level, equal to 10 times the logarithm to the base 10 of the ratio of the measured sound pressure squared to a reference pressure, which is 20 micropascals.
Average Sound Level, (L_{EQ})	The sound level corresponding to a steady state sound level and containing the same total energy as a time varying signal over a given sample period. L_{EQ} is designed to average all of the loud and quiet sound levels occurring over a specific time period.
Sound Transmission Class, (STC)	A single number rating of the noise reduction of a building element.

EXECUTIVE SUMMARY

Project Description

The currently vacant project site is proposed to be developed with a 7,110 square foot travel center with eight (8) vehicle fueling positions, four (4) diesel fueling positions, and a fast-food restaurant with drive-through window. Access for the project site is proposed to 7th Street via three project driveways. The project north driveway is proposed as a full access driveway. The project central driveway is proposed as an outbound only full access driveway. The project south driveway is proposed as an inbound only full access driveway. On-site signage and pavement markings for these inbound and outbound only project driveways should be included in the final site design to the satisfaction of the City of Calimesa Department of Public Works. On-street parking on 7th Street will be prohibited. The project north driveway will service the normal travel center operations whereas the project central driveway and project south driveway will service the four (4) diesel fueling positions. The proposed project is anticipated to be constructed and fully operational by year 2022.

Existing Conditions

The study intersections currently operate within acceptable Levels of Service (D or better) during the peak hours for Existing conditions.

The proposed project is forecast to generate a total of approximately 3,693 daily trips, including 251 trips during the AM peak hour and 268 trips during the PM peak hour.

Level of Service Analysis

Table 8 shows a summary of the intersection Level of Service analysis for the scenarios evaluated.

Vehicle Miles Traveled (VMT) Analysis

The proposed project satisfies the City-established VMT screening criteria for low VMT area and project type screening; therefore, the project may be presumed to result in a less than significant VMT impact and no further analysis is required.

1. INTRODUCTION

This section describes the purpose of this study and the project description. Although this is a technical report, effort has been made to write the report clearly and concisely. A glossary is provided in Appendix A to assist the reader with technical terms related to transportation engineering and planning.

PURPOSE AND OBJECTIVES

The purpose of this traffic impact analysis is to assess potential transportation impacts resulting from development of the proposed project primarily in the context of City of Calimesa discretionary authority and General Plan conformance. A separate vehicle miles traveled (VMT) analysis is provided in the appendices for compliance with California Environmental Quality Act (CEQA) Section 15064.3. The scope of this study was prepared in consultation with the City of Calimesa as documented in Appendix B.

PROJECT DESCRIPTION

The project site is located between 7th Street and the I-10 Freeway approximately 1,000 feet north of Sandalwood Drive in the City of Calimesa. Figure 1 shows the project location map.

The currently vacant project site is proposed to be developed with a 7,110 square foot travel center with eight (8) vehicle fueling positions, four (4) diesel fueling positions, and a fast-food restaurant with drive-through window. Access for the project site is proposed to 7th Street via three project driveways. The project north driveway is proposed as a full access driveway. The project central driveway is proposed as an outbound only full access driveway. The project south driveway is proposed as an inbound only full access driveway. On-site signage and pavement markings for these inbound and outbound only project driveways should be included in the final site design to the satisfaction of the City of Calimesa Department of Public Works. On-street parking on 7th Street will be prohibited. The project north driveway will service the normal travel center operations whereas the project central driveway and project south driveway will service the four (4) diesel fueling positions. The proposed project is anticipated to be constructed and fully operational by year 2022. Figure 2 illustrates the proposed project site plan.

STUDY AREA

The study intersections and general scope of the analysis were determined based on coordination with the City of Calimesa. The study area consists of the following study intersections where the proposed project is expected to contribute 50 or more peak hour trips with classification of "Collector" to "Collector" and above, that are located within the City of Calimesa and Caltrans jurisdictions:

Study Intersections[1]	Jurisdiction[2]
1. 7th Street (NS) at Project North Driveway (EW)	City of Calimesa
2. 7th Street (NS) at Project Central Driveway (EW)	City of Calimesa
3. 7th Street (NS) at Project South Driveway (EW)	City of Calimesa
4. 7th Street (NS) at Sandalwood Drive (EW)	City of Calimesa
5. I-10 SB Ramps (NS) at Sandalwood Drive (EW)	Caltrans
6. I-10 NB On-Ramp (NS) at Sandalwood Drive (EW)	Caltrans
7. Calimesa Boulevard (NS) at Sandalwood Drive (EW)	City of Calimesa
8. I-10 NB Off-Ramp (NS) at Calimesa Boulevard (EW)	Caltrans

[1] (NS) = north-south roadway; (EW) = east-west roadway; SB = Southbound; NB = Northbound
[2] Caltrans = California Department of Transportation

ANALYSIS SCENARIOS

The following scenarios are analyzed during typical weekday AM and PM peak hour conditions:

- Existing Conditions
- Background Conditions (Ambient Growth + Other Development (2022)
- Background Conditions Plus Project (2022)
- Cumulative No Project (Ambient Growth + Other Development) (2040)
- Cumulative Plus Project (2040)

Site Plan

2. METHODOLOGY

This section discusses the analysis methodologies used to assess transportation facility performance as adopted by the respective jurisdictional agencies.

LEVEL OF SERVICE/GENERAL PLAN CONFORMANCE (NON-CEQA)

Level of Service analysis is performed for assessing General Plan operational conformance within the approving agency's discretionary authority. In accordance with CEQA provisions, a project's effect on automobile delay, as measured by Level of Service, shall not constitute a significant environmental impact.

Intersection Delay Methodology

Level of Service analysis is performed for assessing General Plan operational conformance within the approving agency's discretionary authority. In accordance with CEQA provisions, a project's effect on automobile delay, as measured by Level of Service, shall not constitute a significant environmental impact.

To assess the performance of an intersection, the City of Calimesa use the intersection delay method based on procedures contained in the Highway Capacity Manual (Transportation Research Board, 6th Edition). The methodology considers the traffic volume and distribution of movements, traffic composition, geometric characteristics, and signalization details to calculate the average control delay per vehicle and corresponding Level of Service. Control delay is defined as the portion of delay attributed to the intersection traffic control (such as a traffic signal or stop sign) and includes initial deceleration, queue move-up time, stopped delay, and final acceleration delay. The intersection control delay is then correlated to Level of Service based on the following thresholds:

Level of Service	Intersection Control Delay (Seconds / Vehicle)	
	Signalized Intersection	Unsignalized Intersection
A	≤ 10.0	≤ 10.0
B	> 10.0 to ≤ 20.0	> 10.0 to ≤ 15.0
C	> 20.0 to ≤ 35.0	> 15.0 to ≤ 25.0
D	> 35.0 to ≤ 55.0	> 25.0 to ≤ 35.0
E	> 55.0 to ≤ 80.0	> 35.0 to ≤ 50.0
F	> 80.0	> 50.0

Source: Transportation Research Board, Highway Capacity Manual (6th Edition).

Level of Service is used to qualitatively describe the performance of a roadway facility, ranging from Level of Service A (free-flow conditions) to Level of Service F (extreme congestion and system failure). At intersections with traffic signal or all way stop control, Level of Service is determined by the average control delay for the overall intersection. At intersections with cross street stop control (i.e., one- or two-way stop control), Level of Service is determined by the average control delay for the worst individual movement (or movements sharing a single lane).

Intersection delay analysis was performed using the Vistro software in accordance with parameters outlined in Exhibit C of the Riverside County Transportation Department Traffic Impact Analysis Preparation Guide (April 2008).

Performance Standards

City of Calimesa

The definition of an intersection deficiency has been obtained from the City of Calimesa General Plan, which states that the City has a goal of Level of Service C on City-maintained roads. However, Level of Service D may be allowed on City-maintained road segments in commercial and employment areas or any combination of major highways, urban arterials, secondary highways, or freeway ramp intersections. Therefore, Level of Service D has been considered acceptable at the off-site study intersections at or near the vicinity of the I-10 Freeway ramps and Level of Service C has been considered acceptable at all other study locations, including on-site intersections.

California Department of Transportation

The California Department of Transportation (Caltrans) endeavors to maintain a target Level of Service at the transition between Level of Service C and D (maximum 35 seconds of control delay). If an existing facility, or study area intersection for purposes of this analysis, operates at an unacceptable Level of Service, then the existing control delay should be maintained. The lead agency may consult with the California Department of Transportation to determine the appropriate target Level of Service if the maximum 35 seconds of control delay is not feasible.

Operational Thresholds

City of Calimesa

Based on the established performance standards, a potentially operational transportation deficiency is defined to occur if the project causes or worsens unacceptable Level of Service (E, or F) at a study intersection at or near the vicinity of the I-10 Freeway Ramps, or if the project causes or worsens unacceptable Level of Service (D, E, or F) at all other study intersections including on-site intersections,

California Department of Transportation

Based on the established performance standards, a potentially operational transportation deficiency is defined to occur if the project causes or worsens unacceptable Level of Service (E, or F) at a freeway ramp.

Requirement for Improvements

If a proposed project is forecast to result in an operational transportation deficiency, improvements should be identified that will reduce the impact to a less than operational threshold level. Improvements can be in many forms, including the addition of lanes, traffic control modification, or demand management measures. If no feasible improvements can be identified for an operationally impacted facility, project approval may require the City of Calimesa to adopt a statement of overriding considerations.

Direct project impacts are identified in the Existing Plus Project analysis scenario and must be improved via conditions of approval requiring the construction of any improvements necessary to meet the established Level of Service standards (or reduce the project impact to pre-project conditions). Cumulative impacts are identified in the cumulative conditions scenario and may be improved through the payment of various impact fees such as the County of Riverside Development Impact Fees, Road and Bridge Benefit District Fees, and the Transportation Uniform Mitigation Fees to the extent that these programs provide funding for the improvement facilities.

VEHICLE MILES TRAVELED METHODOLOGY (CEQA)

The methodology used to evaluate the impact of land use and transportation projects under CEQA is known as vehicle miles traveled (VMT). In general terms, VMT quantifies the amount and distance of automobile travel attributable to a project or region. A separate vehicle miles traveled (VMT) analysis is provided in the appendices for compliance with California Environmental Quality Act (CEQA) Section 15064.3 and the results are presented in the "Other Considerations" section of this report.

3. EXISTING CONDITIONS

EXISTING ROADWAY SYSTEM

Figure 3 identifies the lane geometry and intersection traffic controls for Existing conditions based on a field survey of the study area. Regional access to the project site is provided by the I-10 Freeway located adjacent to the project site to the east. Key roadways providing local circulation include 7th street, Sandalwood Drive, Calimesa Boulevard, and 5th Street.

GENERAL PLAN CONTEXT

Figure 4 shows the City of Calimesa General Plan Circulation Element roadway classifications map. This figure shows the nature and extent of arterial and collector highways that are needed to adequately serve the ultimate development depicted by the Land Use Element of the General Plan. The City of Calimesa standard roadway cross-sections are illustrated on Figure 5.

TRANSIT SERVICE

Figure 6 shows Existing public transit facilities and routes in the project vicinity serviced by the City of Beaumont Transit System. As shown on Figure 6, the project vicinity is served by the City of Beaumont Transit System Commuter Link 120 – Weekday along Calimesa Boulevard and Sandalwood Drive between I-15 SB Ramps and Calimesa Boulevard.

BICYCLE FACILITIES

The City of Calimesa has bicycle lanes painted adjacent to existing roadways. There are no facilities in the community for bikes only; however, the City does maintain a series of multi-use trails, which accommodate bicycles as well as pedestrians. There are no on-street bicycle facilities in the study area.

EXISTING PEDESTRIAN FACILITIES

Existing pedestrian facilities adjacent to the project site are illustrated on Figure 7.

EXISTING ROADWAY VOLUMES

Figure 8 shows the Existing average daily traffic volumes. The Existing average daily traffic volumes have been obtained from the California Department of Transportation (Caltrans) Traffic Volumes on California State Highways (2017) and factored from peak hour intersection turning movement volumes using the following formula for each intersection leg:

Evening Peak Hour (Approach Volume + Exit Volume) x 12.0 = Leg Volume.

Existing peak hour traffic conditions are based upon AM peak period and PM peak period intersection turning movement counts obtained in December 2020 during typical weekday conditions. The weekday AM peak period was counted between 7:00 AM and 9:00 AM and the weekday PM peak period was counted between 4:00 PM and 6:00 PM. The actual peak hour within the peak period is the four consecutive 15 minute periods with the highest total volume when all movements are added together. Thus, the weekday PM peak hour at one intersection may be 4:45 PM to 5:45 PM if those four consecutive 15 minute periods have the highest combined volume. Intersection turning movement count worksheets are provided in Appendix C.

The current COVID-19 pandemic and related stay-at-home orders imposed by state and local municipalities have resulted in a substantial decrease in traffic volumes. In addition to the current public health restrictions, it is anticipated that the pandemic may have a lasting effect on travel behaviors, such as increased telecommuting. To provide a conservative analysis, the Existing conditions traffic volumes used in this analysis are based on historic and existing counts with adjustments applied with the intent to represent pre-pandemic conditions for the current year. This approach is likely to overestimate actual volumes for the near future since many commuters are expected to continue working from home even as stay-at-home orders are eased.

A historical 24-hour roadway segment count for Sandalwood Drive between 7th Street and Calimesa Boulevard conducted in February 2020 prior to the COVID-19 pandemic was obtained from City of Calimesa Public Works Department staff. The February 2020 AM and PM peak period volumes for this roadway segment were compared to December 2020 AM and PM peak period roadway segment volumes. To bring the December 2020 counts to pre-pandemic existing year (2020) conditions, the intersection turning movement counts were adjusted by a growth rate of 165.65% during the AM peak hour and 11.55% during the PM peak hour. The Mesa Verde Middle School is located at the western terminus of Sandalwood Drive, west of 7th Street. Students are not currently on campus. The project trip generation and trip distribution for this school (enrollment of 905 students) was manually added to existing volumes to account for the school being in session. This is a conservative estimate since the growth rate was determined prior to accounting for these school trips and may overestimate pre-pandemic (2020) volumes. These adjustment factor calculations, and the growth rate increased intersection turning movement counts, are included in Appendix C

Figure 9 and Figure 10 show the Existing AM peak hour and PM peak hour intersection turning movement volumes.

Existing Levels of Service

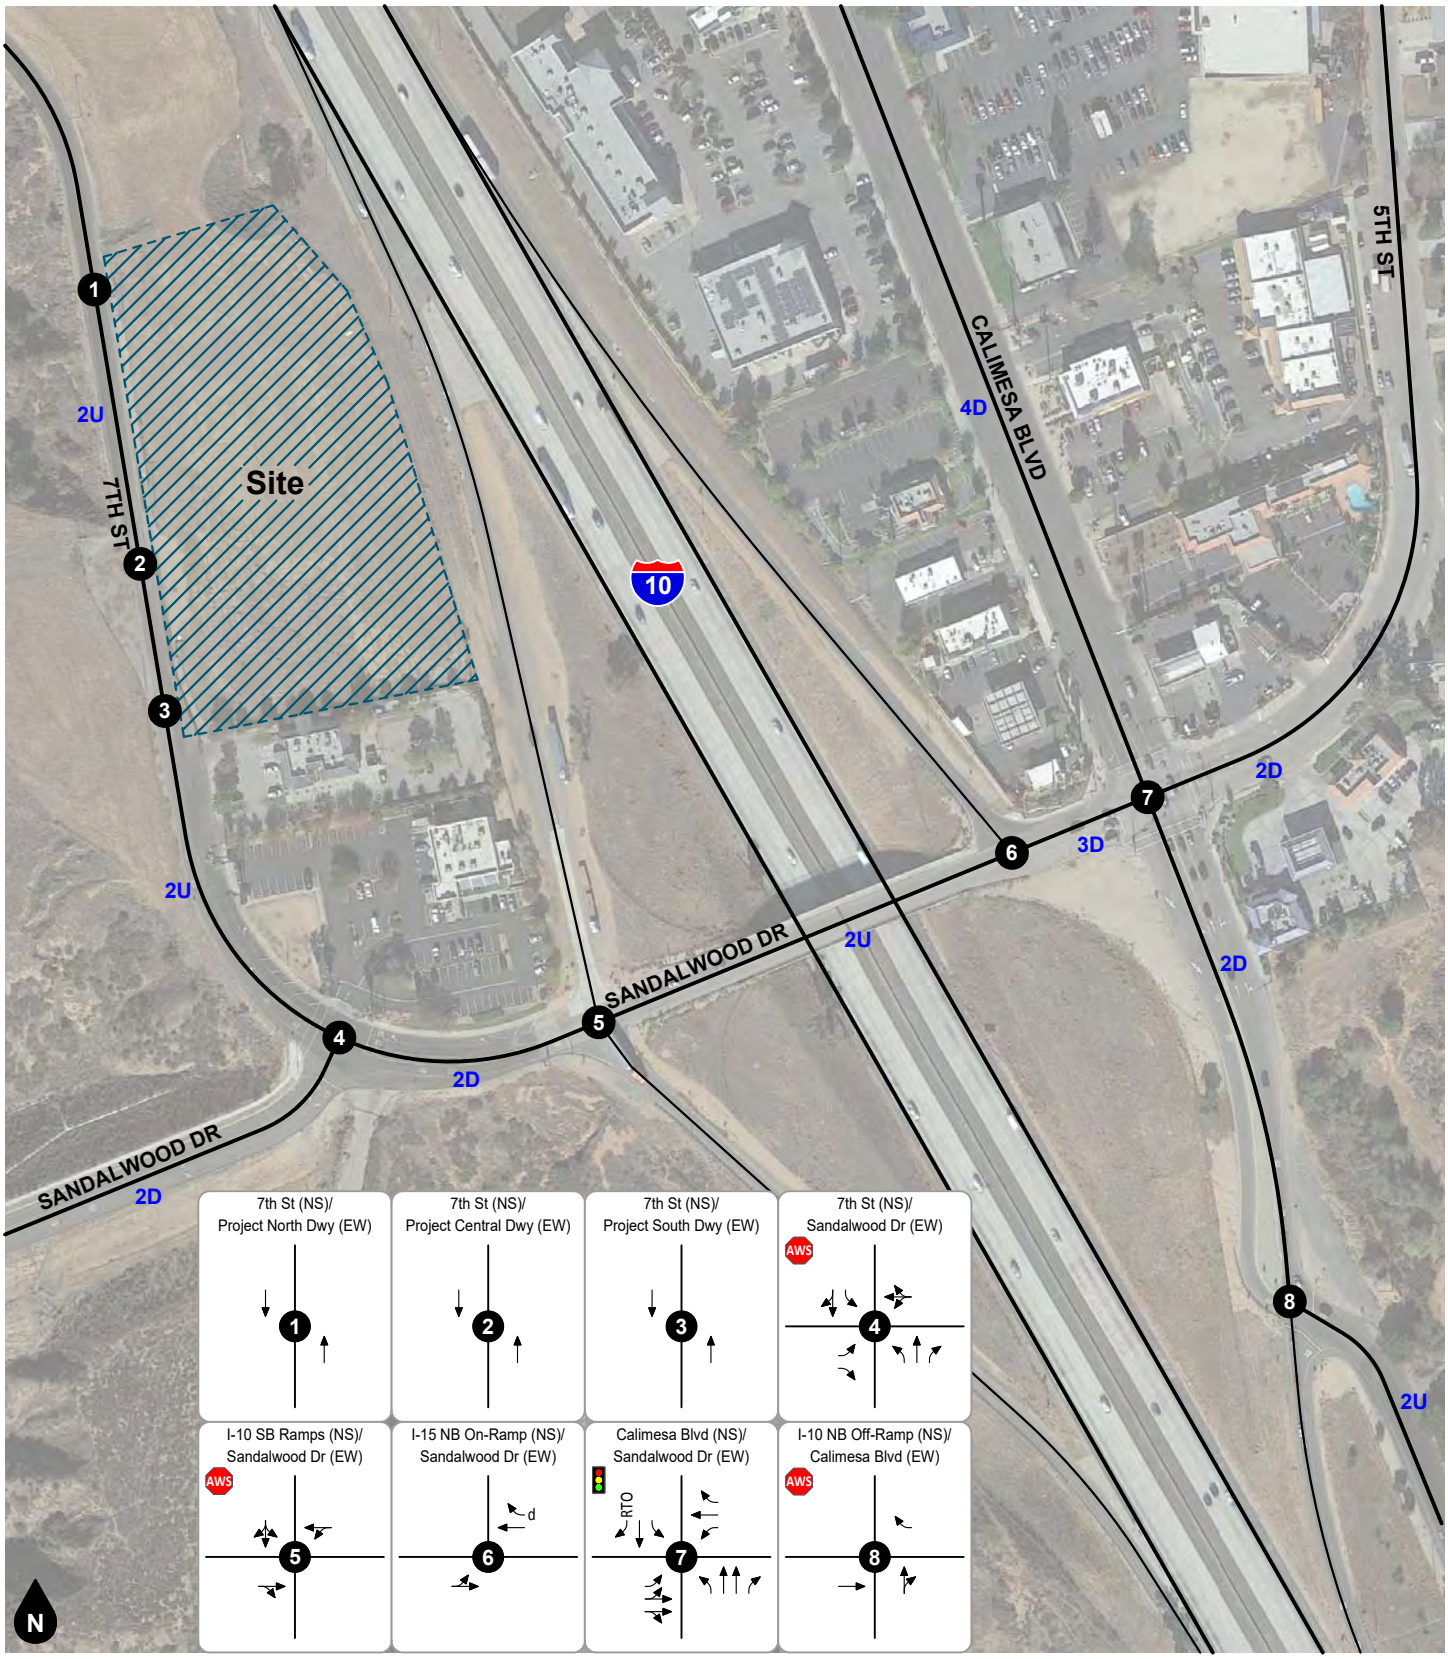
The intersection Levels of Service for Existing conditions have been calculated and are shown in Table 1. Existing intersection Level of Service worksheets are provided in Appendix D.

As shown in Table 1, the study intersections currently operate within acceptable Levels of Service (D or better) during the peak hours for Existing conditions.

Existing Traffic Signal Warrant Analysis

The unsignalized study intersection of I-10 NB Off-Ramp at Calimesa Boulevard (#8) appears to currently satisfy the California *Manual on Uniform Traffic Control Devices* (CA MUTCD) peak hour volume warrant for Existing conditions. Traffic signal warrant worksheets are provided in Appendix E.

Table 1
Existing Intersection Levels of Service



Study Intersection	Traffic Control[1]	AM Peak Hour		PM Peak Hour	
		Delay[2]	LOS[3]	Delay[2]	LOS[3]
4. 7th St at Sandalwood Dr	AWS	8.4	A	7.9	A
5. I-10 SB Ramps at Sandalwood Dr	AWS	14.5	B	11.2	B
6. I-10 NB On-Ramp at Sandalwood Dr	UN	10.8	B	8.9	A
7. Calimesa Blvd at Sandalwood Dr	TS	26.3	C	19.4	B
8. I-10 NB Off-Ramp at Calimesa Blvd	AWS	17.5	C	9.6	A

Notes:

(1) AWS = All Way Stop; UN = Uncontrolled; TS = Traffic Signal

(2) Delay is shown in seconds/vehicle. For intersections with traffic signal or all way stop control, overall average intersection delay and LOS are shown. For intersections with cross street stop control, LOS is based on average delay of the worst individual lane (or movements sharing a lane).

(3) LOS = Level of Service

4. PROJECT TRIP FORECASTS

This section describes how project trip generation, trip distribution and trip assignment forecasts were developed. The forecast project volumes are illustrated on figures contained in this section.

PROJECT TRIP GENERATION

Table 2 shows the project trip generation based upon rates obtained from Institute of Transportation Engineers (ITE) *Trip Generation Manual* (10th Edition, 2017). Trip generation rates were determined for daily trips, AM peak hour inbound and outbound trips, and PM peak hour inbound and outbound trips for the proposed land use. Trip generation rates for Land Use Code 853 – Convenience Market with Gasoline Pumps, Land Use Code 944 – Gasoline/Service Station, and Land Use Code 934 – Fast-Food Restaurant with Drive Through Window were used for the proposed project. The number of trips forecast to be generated by the proposed project are determined by multiplying the trip generation rates by the land use quantities.

As shown in Table 2, the proposed project is forecast to generate a total of approximately 3,693 daily trips, including 251 trips during the AM peak hour and 268 trips during the PM peak hour.

The total gross floor area for the convenience market and fast-food restaurant with drive-thru is 7,110 square feet. The convenience market is 3,849 square feet, the fast-food restaurant is 1,400 square feet, and the common area is 1,861 square feet. The common area consists of bathrooms, showers, laundry, storage, and a seating area for truckers. Approximately 80 percent of the common area has been allocated to the convenience center and 20 percent to the fast-food restaurant with drive-thru for trip generation purposes. Thus, the convenience market has been analyzed at 5,388 square feet and the fast-food restaurant with drive-thru has been analyzed at 1,772 square feet. For trip generation purposes, the convenience market would be shared by the standard gas station pumps and the diesel fueling facility pumps.

The trip generation forecast used for this analysis provides a very conservative estimate because the ITE trip generation rates for Land Use Code 944 represent the number of trips generated per vehicle fueling position at a standard passenger car fueling pump. ITE does not currently provide trip generation rates for a diesel fueling facility. In reality, the proposed diesel fueling stations are likely to have a much lower service rate due to longer fueling times and lower demand compared to passenger cars. Furthermore, the trip generation forecast does not include reductions for pass-by trips.

Land uses such as shopping centers, restaurants, gasoline stations, and convenience stores will often locate next to busy roadways to attract motorists already on the street. Since the trip generation rates contained in the ITE *Trip Generation Manual* represent vehicles entering and exiting at the site driveway(s), it is appropriate to reduce the initial trip generation forecast by the applicable pass-by trip rate when calculating the net new trips that will be added to the surrounding street system. This analysis applies a pass-by trip reduction for the convenience market/gas station land use based upon rates from the ITE *Trip Generation Handbook* (3rd Edition, 2017). Pass-by trip reductions were not applied in this analysis since 7th Street adjacent to the project site has minimal traffic volumes relative to the pass-by trip reduction that would be calculated based on ITE rates.

Traffic volumes shown in Table 2 consist of the total trips generated for each project land use. As a service station trip generated by the project may also interact with the restaurant land use within the project, a double counting of those trips occurs. To account for this internal interaction, the trips generated by the project site have been adjusted by 10 percent.

PROJECT TRIP DISTRIBUTION AND ASSIGNMENT

Figure 11 to Figure 14 show the forecast directional outbound and inbound distribution patterns for the project generated trips. The project trip distribution patterns are based on review of existing volume data, surrounding land uses and the local and regional roadway facilities in the project vicinity. Full access for the project site is proposed to 7th Street via three project driveways.

Based on the identified project trip generation and distributions, project average daily traffic volumes for Opening Year 2022 have been calculated and shown on Figure 15. Project AM and PM peak hour intersection turning movement volumes expected from the project are depicted on Figure 16 and Figure 17, respectively.

Table 2
Project Trip Generation

Trip Generation Rates									
			AM Peak Hour			PM Peak Hour			Daily
Land Use	Source[1]	Units[2]	% In	% Out	Rate	% In	% Out	Rate	Rate
Convenience Market with Gasoline Pumps	ITE 853	VFP	50%	50%	20.76	50%	50%	23.04	322.50
Diesel Fueling Facility/Gas Station	ITE 944	VFP	50%	50%	10.28	50%	50%	14.03	172.01

Trips Generated									
			AM Peak Hour			PM Peak Hour			
Land Use	Quantity	Units[2]	In	Out	Total	In	Out	Total	Daily
Convenience Market with Gasoline Pumps[3]	8	VFP	83	83	166	92	92	184	2,580
Diesel Fueling Facility/Gas Station[4]	4	VFP	21	21	42	28	28	56	688
Fast-Food Restaurant with Drive-Thru	1.772	TSF	36	35	71	30	28	58	835
Subtotal			140	139	279	150	148	298	4,103
Internal Capture (10%)[5]			*-14*	*-14*	*-28*	*-15*	*-15*	*-30*	*-410*
Total			126	125	251	135	133	268	3,693

Notes:

(1) ITE = Institute of Transportation Engineers *Trip Generation Manual* (10th Edition, 2017); ### = Land Use Code

(2) VFP = Vehicle Fueling Positions; TSF = Thousand Square Feet

(3) The total gross floor area for the convenience market and fast-food restaurant with drive-thru is 7,110 square feet. The convenience market is 3,849 square feet, the fast-food restaurant is 1,400 square feet, and the common area is 1,861 square feet. The common area consists of bathrooms, showers, laundry, storage, and a seating area for truckers. 80 percent of the common area has been allocated to the convenience center and 20 percent to the fast-food restaurant with drive-thru for trip generation purposes. Thus, the convenience market has been analyzed at 5,388 square feet and the fast-food restaurant with drive-thru has been analyzed at 1,772 square feet. For trip generation purposes, the convenience market would be shared by the standard gas station pumps and the diesel fueling facility pumps.

(4) A passenger car equivalent (PCE) is a metric to assess the impact of larger vehicles, such as trucks, recreational vehicles, and buses, by converting the traffic volume of larger vehicles to an equivalent number of passenger cars. In consultation with City of Calimesa staff, the passenger car equivalent for a Semi-Truck/RV using the Diesel fueling facility would be 3.0. Thus, each trip generated by the Diesel fueling facility would be equivalent to 3 passenger cars.

However, it is important to note that the trip generation used in this report for the Diesel fueling facility is a very conservative estimate because the ITE trip generation rates for Land Use Code 944 represent the number of trips generated per vehicle fueling position at a standard passenger car fueling pump. ITE does not currently provide trip generation rates for a Diesel fueling facility In reality, the proposed Diesel fueling stations are likely to have a much lower service rate due to longer fueling times and lower demand compared to passenger cars. Furthermore, the trip generation forecast does not include reductions for pass-by trips.

For these reasons, the passenger car equivalent of 3.0 was not applied to the trip generation for the Diesel fueling facility.

(5) An internal capture of 10% was applied to account for interaction between the land uses.

5. FUTURE VOLUME FORECASTS

This section describes how future volume forecasts for each analysis scenario were developed. Forecast study area volumes are illustrated on figures contained in this section.

CUMULATIVE TRIPS

Ambient Growth Rate

To account for ambient growth on roadways, existing roadway volumes were increased by a growth rate of two percent (2%) per year over two years for Opening Year (2022) conditions. This equates to a total growth factor of approximately 1.04. The ambient growth rate was conservatively applied to all movements at the study intersections.

Other Development

To account for trips generated by future development, trips generated by pending or approved other development projects in the project vicinity were added to the study area. Table 3 shows the trip generation summary for other development projects and Figure 18 shows the other development location map.

Figure 19 shows the forecast average daily traffic volumes for the other development for Opening Year conditions. Figure 20 and Figure 21 show the forecast AM and PM peak hour intersection turning movement volumes for trips generated by other developments.

The information for other development was provided by the City of Calimesa and City of Yucaipa.

ANALYSIS SCENARIO VOLUME FORECASTS

Background Conditions

To develop Background Conditions volume forecasts, Existing volumes were combined with ambient growth and other development. Background Conditions average daily traffic volumes are shown on Figure 22. Background Conditions AM and PM peak hour intersection turning movement volumes are shown on Figure 23 and Figure 24.

Background Conditions Plus Project

Background Conditions Plus Project volume forecasts were developed by adding project trips to the Background Conditions forecast. Background Conditions Plus Project average daily traffic volumes are shown on Figure 25. Background Conditions Plus Project AM and PM peak hour intersection turning movement volumes are shown on Figure 26 and Figure 27.

6. FUTURE OPERATIONAL ANALYSIS

Detailed intersection Level of Service calculation worksheets for each of the following analysis scenarios are provided in Appendix D.

BACKGROUND CONDITIONS

The intersection Levels of Service for Background Conditions are shown in Table 4. As shown in Table 4, the study intersections are forecast to operate within acceptable Levels of Service (D or better) during the peak hours for Background Conditions.

BACKGROUND CONDITIONS PLUS PROJECT

The intersection Levels of Service for Background Conditions Plus Project are shown in Table 5. As shown in Table 5, the study intersections are forecast to operate within acceptable Levels of Service (D or better) during the peak hours for Background Conditions Plus Project.

Table 4
Background Conditions Intersection Levels of Service

Study Intersection	Traffic Control[1]	AM Peak Hour		PM Peak Hour	
		Delay[2]	LOS[3]	Delay[2]	LOS[3]
4. 7th St at Sandalwood Dr	AWS	9.3	A	9.0	A
5. I-10 SB Ramps at Sandalwood Dr	AWS	17.5	C	13.7	B

(3) LOS = Level of Service

7. SITE ACCESS & CIRCULATION

This section includes a description of project improvements necessary to provide site access and an evaluation of site access and circulation.

PROJECT DESIGN FEATURES

The proposed project shall construct the following improvements to provide project site access:

- Construct the 7th Street (NS) at Project North Driveway (EW) to provide one inbound lane and one outbound lane with westbound stop-control and the following lane configurations:
  - Northbound: one shared through/right turn lane;
  - Southbound: one shared left/through lane; and
  - Westbound: one shared left/right turn lane.

- Construct the 7th Street (NS) at Project Central Driveway (EW) to provide one outbound lane with westbound stop-control and the following lane configurations:
  - Northbound: one through lane;
  - Southbound: one through lane; and
  - Westbound: one shared left/right turn lane.
  - On-site signage and pavement markings for this outbound only project driveway should be included in the final site design to the satisfaction of the City of Calimesa Department of Public Works.

- Construct the 7th Street (NS) at Project South Driveway (EW) to provide one inbound lane and the following lane configurations:
  - Northbound: one shared through/right turn lane; and
  - Southbound: one shared left/through lane.
  - On-site signage and pavement markings for this inbound only project driveway should be included in the final site design to the satisfaction of the City of Calimesa Department of Public Works.

This analysis also assumes the project shall comply with the following conditions as part of the City of Calimesa standard development review process:

- A construction work site traffic control plan shall comply with State standards set forth in the California Manual of Uniform Traffic Control Devices and shall be submitted to the City for review and approval prior to the issuance of a grading permit or start of construction. The plan shall identify any roadway, sidewalk, bike route, or bus stop closures and detours as well as haul routes and hours of operation. All construction related trips shall be restricted to off-peak hours to the extent possible.

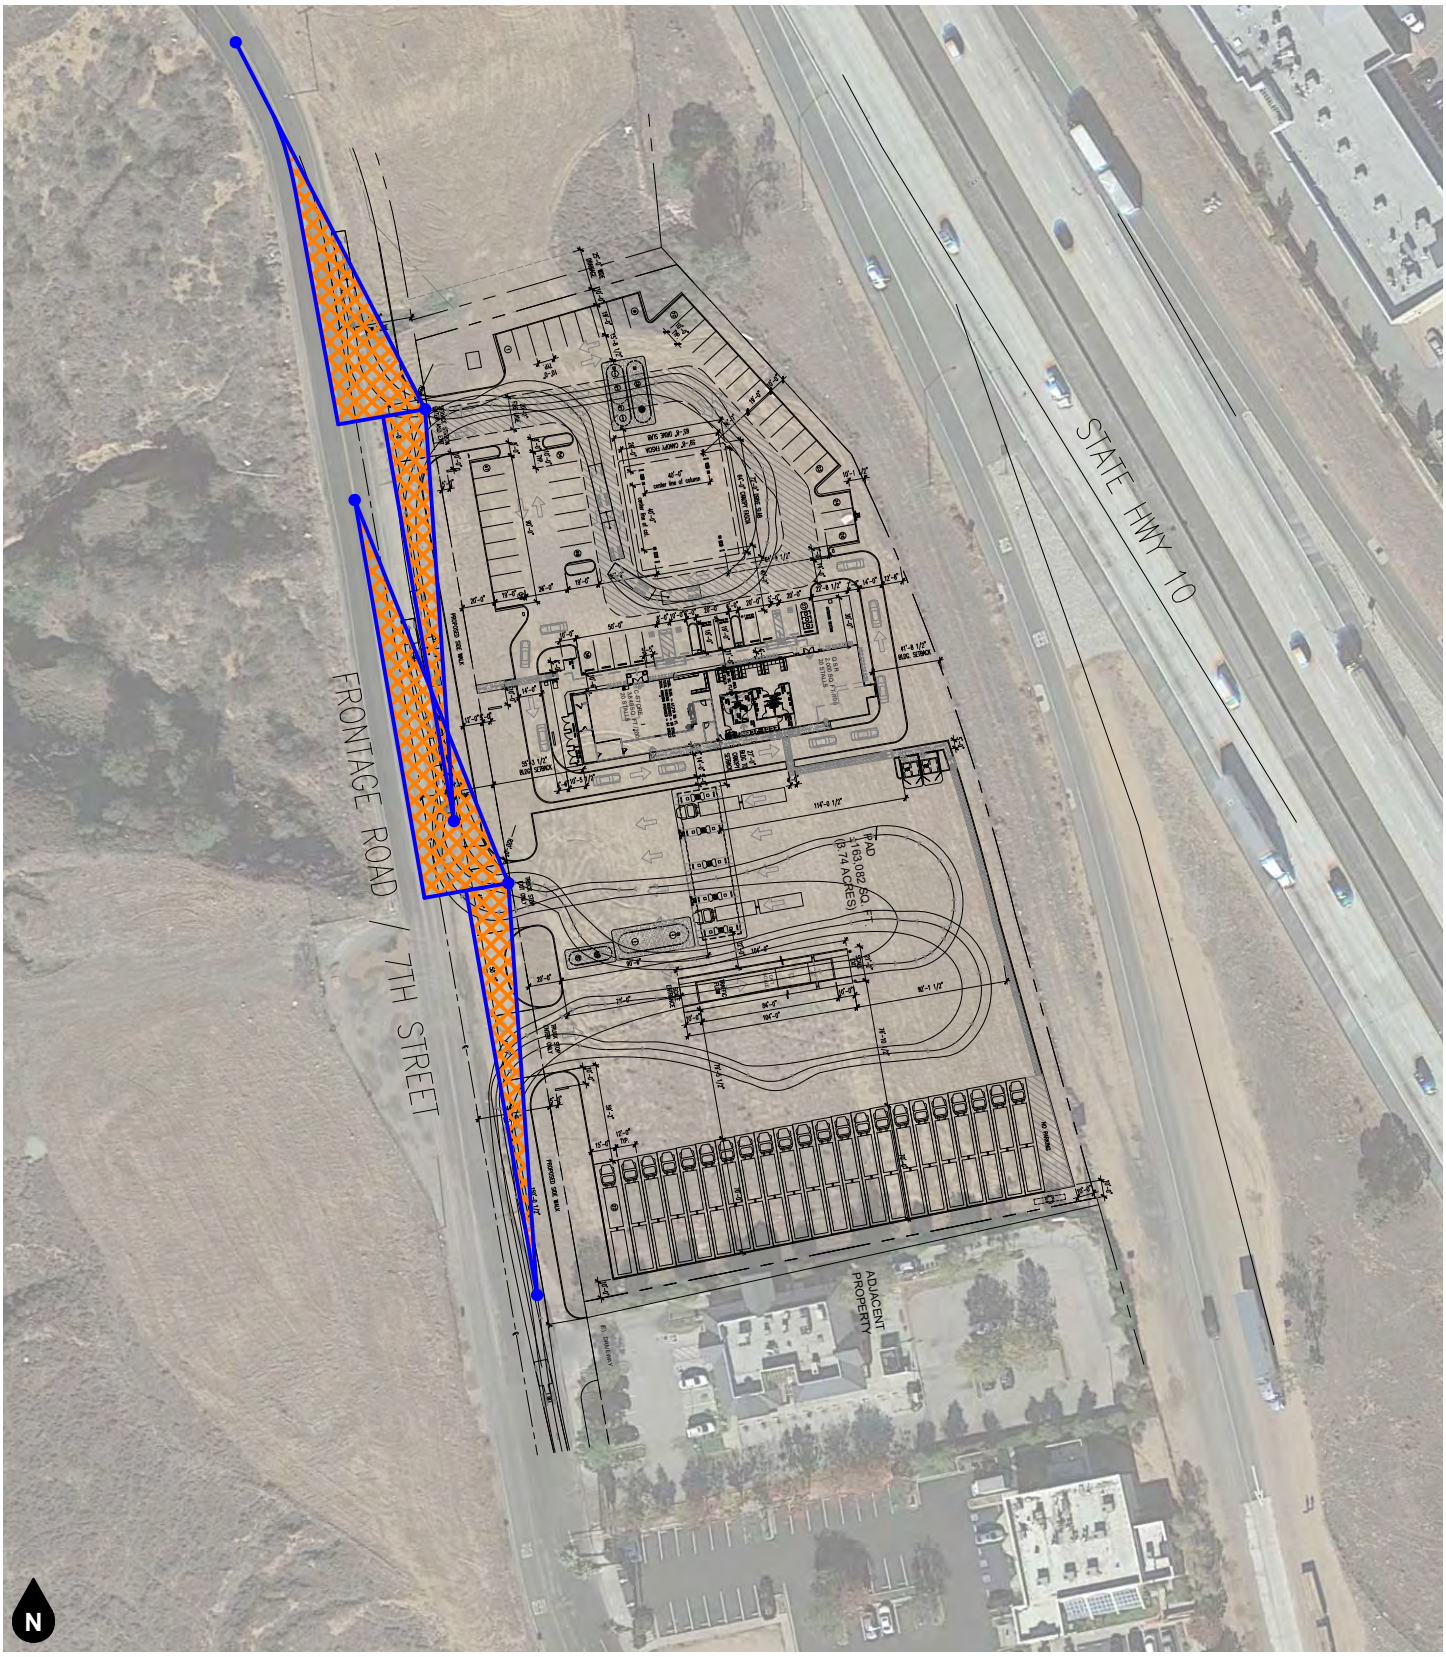
- All on-site and off-site roadway design, traffic signing and striping, and traffic control improvements relating to the proposed project shall be constructed in accordance with applicable State/Federal engineering standards and to the satisfaction of the City of Calimesa.

- Site-adjacent roadways shall be constructed or repaired at their ultimate half-section width, including landscaping and parkway improvements in conjunction with development, or as otherwise required by the City of Calimesa.

- Adequate off-street parking shall be provided to the satisfaction of City of Calimesa.

- The final grading, landscaping, and street improvement plans should demonstrate that sight distance standards are met in accordance with applicable City of Calimesa/California Department of Transportation sight distance standards.

SIGHT DISTANCE ANALYSIS



The design speed along 7th Street adjacent to the project is 35 miles per hour according to the City of Calimesa Public Works Department staff and will be posted as such with a speed zone adoption. The stopping sight distance minimum is 250 feet per Table 201.1 in the Highway Design Manual (see Appendix F).

Figure 28 illustrates the stopping sight distance for 7th Street. Stopping sight distance requires 250 feet of unobstructed line of sight for a 35 mile per hour design speed on 7th Street. The driver's eye for a vehicle located at a Project Driveway intending to head either northbound or southbound on 7th Street is situated 42 inches above the pavement and 15 feet back from the edge of the travel way. The driver must have a minimum unobstructed sight line of 250 feet looking northbound at an object 42 inches above the pavement situated in the center of the southbound travel lane and must have a minimum unobstructed sight line of 300 feet looking southbound at an object 42 inches above the pavement situated in the center of the northbound travel lane.

7th Street and the surrounding terrain at and adjacent to the project site is relatively flat with minimal changes in gradient. Therefore, vertical sight distance concerns do not appear to be prevalent.

TRUCK TURNING TEMPLATES

Truck turning templates are shown on the site plan in Figure 2. These truck turning templates show vehicles entering and exiting the project driveways northbound on 7th Street, while circulating internally within the project site.

Legend

Stopping Sight Distance 250 Feet (35MPH)

Restricted Use Area

Figure 28
Sight Distance Analysis

8. OTHER CONSIDERATIONS

VMT Analysis

A VMT analysis was conducted for this project and included in Appendix G. As shown in Appendix G, the proposed project satisfies the City-established VMT screening criteria for low VMT area and project type screening; therefore, the project may be presumed to result in a less than significant VMT impact and no further analysis is required.

Addendum to Traffic Impact Analysis

Appendix I includes an accepted addendum to the traffic impact analysis which addresses comments made by City of Calimesa staff regarding this traffic impact analysis.

9. BUILDOUT YEAR 2040 ANALYSIS

A Buildout Year 2040 analysis was conducted for this project. The Cumulative No Project and Cumulative Plus Project scenarios reflect this buildout analysis. While the *Final City of Calimesa Transportation Impact Analysis Guidelines for Vehicle Miles Traveled and Level of Service Assessment* (May 2020) includes a buildout analysis under "analysis scenarios" for LOS assessment, buildout analysis is not typically required unless the project "proposes a General Plan Amendment to the Land Use or Circulation Element, Specific Plan, Zone Change, or other that increase traffic beyond what was approved in the General Plan" as specified in the *Transportation Analysis Guidelines for Level of Service Vehicle Miles Traveled*, September 2020 (County of Riverside Transportation Department). The proposed development does not propose an action that would increase traffic beyond what was approved in the General Plan.

Therefore, this section is provided for conformance with City of Calimesa TIA guidelines, but it is recommended that this section of the TIA be used for informational purposes only and not for purposes related to LOS deficiencies and operational improvements imposition.

BUILDOUT ROADWAY NETWORK

Figure 29 shows the lane geometry and intersection controls at the study area intersections expected to be constructed and operational by Buildout Year 2040. These lane geometrics and intersection controls are consistent with the Buildout Year (2035) recommended improvements from the *Mesa Verde Estates Focused Traffic Study* (Urban Crossroads, October 10, 2016). These improvements include all phases of the Mesa Verde Estates Specific Plan Project, which is anticipated for completion in year 2035. These improvements also include reconfiguration of the I-10 Freeway at Sandalwood Drive interchange. Appendix H includes the buildout lane geometrics and intersection controls assumptions from the *Mesa Verde Estates Focused Traffic Study*.

CUMULATIVE TRIPS

Other Development

To account for trips generated by future development, including full buildout of the Mesa Verde Estates Specific Plan, the AM and PM peak hour intersection turning movement volumes from the "Phase 3B - Buildout (2035) Existing Plus Ambient Growth Plus Cumulative Plus Project Traffic Volumes (Exhibit 11-2" from the *Mesa Verde Estates Focused Traffic Study* were used for baseline Cumulative No Project traffic volumes. These forecasts include ambient growth, other development, and the Mesa Verde Estates Specific Plan at full buildout. Appendix H includes these AM and PM peak hour intersection turning movement volumes.

Ambient Growth Rate

To account for ambient growth on roadways, the aforementioned intersection turning movement volumes were increased by a growth rate of one percent (1%) per year over five years to account for the five-year gap between the Buildout Year (2035) analysis conducted for the Mesa Verde Estates Specific Plan project and current Buildout Year 2040 conditions. This equates to a total growth factor of approximately 1.05. The ambient growth rate was conservatively applied to all movements at the study intersections.

Although Buildout Year forecasts account for ultimate growth within a given area based on the General Plan, the Buildout Year is routinely updated every few years and forecasts refined. While it is not anticipated that the Buildout Year (2035) traffic volumes from the aforementioned traffic study would not also be indicative of Buildout Year 2040 traffic volumes, this annual ambient growth rate of one percent (1%) per year over five years was applied to provide for a conservative analysis.

Analysis Scenario Volume Forecasts

Cumulative No Project Conditions

To develop Cumulative No Project volume forecasts, traffic volumes as previously described in this section were combined with ambient growth. Cumulative No Project average daily traffic volumes are shown on Figure 30. Cumulative No Project AM and PM peak hour intersection turning movement volumes are shown on Figure 31 and Figure 32.

Cumulative Plus Project Conditions

To develop Cumulative Plus Project volume forecasts, traffic volumes as previously described in this section were combined with ambient growth. Cumulative Plus Project average daily traffic volumes are shown on Figure 33. Cumulative Plus Project AM and PM peak hour intersection turning movement volumes are shown on Figure 34 and Figure 35.

Buildout Year 2040 Operational Analysis

Detailed intersection Level of Service calculation worksheets for each of the following analysis scenarios are provided in Appendix H.

Cumulative No Project Conditions

The intersection Levels of Service for Cumulative No Project Conditions are shown in Table 6. As shown in Table 6, the study intersections are forecast to operate within acceptable Levels of Service (D or better) during the peak hours for Cumulative No Project Conditions.

Cumulative Plus Project Conditions

The intersection Levels of Service for Cumulative Plus Project Conditions are shown in Table 7. As shown in Table 7, the study intersections are forecast to operate within acceptable Levels of Service (D or better) during the peak hours for Cumulative Plus Project Conditions.

Operational Improvements

No operational improvements are recommended for Cumulative Plus Project conditions beyond the recommended improvements used for the Cumulative No Project scenario, as specified in Buildout Year (2035) recommended improvements from the *Mesa Verde Estates Focused Traffic Study*.

10. CONCLUSIONS

PROJECT TRIPS

The proposed project is forecast to generate a total of approximately 3,693 daily trips, including 251 trips during the AM peak hour and 268 trips during the PM peak hour.

LEVEL OF SERVICE ANALYSIS

Table 8 shows a summary of the intersection Level of Service analysis for the scenarios evaluated.

VEHICLE MILES TRAVELED (VMT) ANALYSIS

The proposed project satisfies the City-established VMT screening criteria for low VMT area and project type screening; therefore, the project may be presumed to result in a less than significant VMT impact and no further analysis is required.

Table 8

GLOSSARY

GLOSSARY OF TERMS

ACRONYMS

AC	Acres
ADT	Average Daily Traffic
Caltrans	California Department of Transportation
DU	Dwelling Unit
ICU	Intersection Capacity Utilization
LOS	Level of Service
TSF	Thousand Square Feet
V/C	Volume/Capacity
VMT	Vehicle Miles Traveled

TERMS

AVERAGE DAILY TRAFFIC: The average 24-hour volume for a stated period divided by the number of days in that period. For example, Annual Average Daily Traffic is the total volume during a year divided by 365 days.

BANDWIDTH: The number of seconds of green time available for through traffic in a signal progression.

BOTTLENECK: A point of constriction along a roadway that limits the amount of traffic that can proceed downstream from its location.

CAPACITY: The maximum number of vehicles that can be reasonably expected to pass over a given section of a lane or a roadway in a given time period.

CHANNELIZATION: The separation or regulation of conflicting traffic movements into definite paths of travel by the use of pavement markings, raised islands, or other suitable means to facilitate the safe and orderly movements of both vehicles and pedestrians.

CLEARANCE INTERVAL: Nearly same as yellow time. If there is an all red interval after the end of a yellow, then that is also added into the clearance interval.

CONTROL DELAY: The component of delay, typically expressed in seconds per vehicle, resulting from the type of traffic control at an intersection. Control delay is measured by comparison with the uncontrolled condition; it includes delay incurred by slowing down, stopping/waiting, and speeding up.

CORDON: An imaginary line around an area across which vehicles, persons, or other items are counted (in and out).

CORNER SIGHT DISTANCE: The minimum sight distance required by the driver of a vehicle to cross or enter the lanes of the major roadway without requiring approaching traffic travelling at a given speed to radically alter their speed or trajectory. Corner sight distance is measured from the driver's eye at 42 inches above the pavement to an object height of 36 inches above the pavement in the center of the nearest approach lane.

CYCLE LENGTH: The time period in seconds required for a traffic signal to complete one full cycle of indications.

CUL-DE-SAC: A local street open at one end only and with special provisions for turning around.

DAILY CAPACITY: A theoretical value representing the daily traffic volume that will typically result in a peak hour volume equal to the capacity of the roadway.

DELAY: The time consumed while traffic is impeded in its movement by some element over which it has no control, usually expressed in seconds per vehicle.

DEMAND RESPONSIVE SIGNAL: Same as traffic-actuated signal.

DENSITY: The number of vehicles occupying in a unit length of the through traffic lanes of a roadway at any given instant. Usually expressed in vehicles per mile.

DETECTOR: A device that responds to a physical stimulus and transmits a resulting impulse to the signal controller.

DESIGN SPEED: A speed selected for purposes of design. Features of a highway, such as curvature, superelevation, and sight distance (upon which the safe operation of vehicles is dependent) are correlated to design speed.

DIRECTIONAL SPLIT: The percent of traffic in the peak direction at any point in time.

DIVERSION: The rerouting of peak hour traffic to avoid congestion.

FORCED FLOW: Opposite of free flow.

FREE FLOW: Volumes are well below capacity. Vehicles can maneuver freely and travel is unimpeded by other traffic.

GAP: Time or distance between successive vehicles in a traffic stream, rear bumper to front bumper.

HEADWAY: Time or distance spacing between successive vehicles in a traffic stream, front bumper to front bumper.

INTERCONNECTED SIGNAL SYSTEM: A number of intersections that are connected to achieve signal progression.

LEVEL OF SERVICE: A qualitative measure of a number of factors, which include speed and travel time, traffic interruptions, freedom to maneuver, safety, driving comfort and convenience, and operating costs.

LOOP DETECTOR: A vehicle detector consisting of a loop of wire embedded in the roadway, energized by alternating current and producing an output circuit closure when passed over by a vehicle.

MINIMUM ACCEPTABLE GAP: Smallest time headway between successive vehicles in a traffic stream into which another vehicle is willing and able to cross or merge.

MULTI-MODAL: More than one mode; such as automobile, bus transit, rail rapid transit, and bicycle transportation modes.

OFFSET: The time interval in seconds between the beginning of green at one intersection and the beginning of green at an adjacent intersection.

PLATOON: A closely grouped component of traffic that is composed of several vehicles moving, or standing ready to move, with clear spaces ahead and behind.

PASSENGER CAR EQUIVALENT (PCE): A metric used to assess the impact of larger vehicles, such as trucks, recreational vehicles, and buses, by converting the traffic volume of larger vehicles to an equivalent number of passenger cars.

PEAK HOUR: The 60 consecutive minutes with the highest number of vehicles.

PRETIMED SIGNAL: A type of traffic signal that directs traffic to stop and go on a predetermined time schedule without regard to traffic conditions. Also, fixed time signal.

PROGRESSION: A term used to describe the progressive movement of traffic through several signalized intersections.

QUEUE: The number of vehicles waiting at a service area such as a traffic signal, stop sign, or access gate.

QUEUE LENGTH: The length of vehicle queue, typically expressed in feet, waiting at a service area such as a traffic signal, stop sign, or access gate.

SCREEN-LINE: An imaginary line or physical feature across which all trips are counted, normally to verify the validity of mathematical traffic models.

SHARED/RECIPROCAL PARKING AGREEMENT: A written binding document executed between property owners to provide a designated number of off-street parking stalls within a designated area to be available for specified businesses or land uses.

SIGHT DISTANCE: The continuous length of roadway visible to a driver or roadway user.

SIGNAL CYCLE: The time period in seconds required for one complete sequence of signal indications.

SIGNAL PHASE: The part of the signal cycle allocated to one or more traffic movements.

STACKING DISTANCE: The length of area available behind a service area, such as a traffic signal or gate, for vehicle queueing to occur.

STARTING DELAY: The delay experienced in initiating the movement of queued traffic from a stop to an average running speed through an intersection.

STOPPING SIGHT DISTANCE: The minimum distance required by the driver of a vehicle on the major roadway travelling at a given speed to bring the vehicle to a stop after an object on the road becomes visible. Stopping sight distance is measured from the driver's eye at 42 inches above the pavement to an object height of 6 inches above the pavement.

TRAFFIC-ACTUATED SIGNAL: A type of traffic signal that directs traffic to stop and go in accordance with the demands of traffic, as registered by the actuation of detectors.

TRIP: The movement of a person or vehicle from one location (origin) to another (destination). For example, from home to store to home is two trips, not one.

TRIP-END: One end of a trip at either the origin or destination (i.e., each trip has two trip-ends). A trip-end occurs when a person, object, or message is transferred to or from a vehicle.

TRIP GENERATION RATE: The quantity of trips produced and/or attracted by a specific land use stated in terms of units such as per dwelling, per acre, and per 1,000 square feet of floor space.

TRUCK: A vehicle having dual tires on one or more axles, or having more than two axles.

TURNING RADIUS: The circular arc formed by the smallest turning path radius of the front outside tire of a vehicle, such as that performed by a U-turn maneuver. This is based on the length and width of the wheel base as well as the steering mechanism of the vehicle.

UNBALANCED FLOW: Heavier traffic flow in one direction than the other. On a daily basis, most facilities have balanced flow. During the peak hours, flow is seldom balanced in an urban area.

VEHICLE MILES OF TRAVEL: A measure of the amount of usage of a section of highway, obtained by multiplying the average daily traffic by length of facility in miles.

Transportation & Environmental Analysis

November 10, 2020

Ms. Monae Pugh
CITY OF CALIMESA DEPARTMENT OF PUBLIC WORKS

RE: Sandalwood Travel Center Traffic Impact Analysis Scoping Agreement
19317

Dear Ms. Pugh:

INTRODUCTION

The following is additional issues to be addressed in the traffic impact analysis.

STUDY SCENARIOS

The following study scenarios will be analyzed in the traffic impact analysis:

- Existing
- Background Conditions (Ambient Growth + Other Development) (2022)
- Background Conditions Plus Project (2022)
- Cumulative No Project (Ambient Growth + Other Development) (2040)
- Cumulative Plus Project (2040)

TRAFFIC COUNTS

Historical data is available.

New intersection turning movement counts will be collected at the study intersections during the AM peak period (7:00 AM – 9:00 AM) and PM peak period (4:00 PM – 6:00 PM) on a typical weekday (Tuesday, Wednesday, or Thursday) when historical traffic counts are not available. Historical traffic counts will be acquired for the study intersection where available. These historical traffic counts will be adjusted with a growth rate for 2020 traffic conditions. Intersections without historical traffic count data will be manually adjusted based on the traffic volumes at nearby intersections with historical data to forecast pre-pandemic traffic conditions.

SIGHT DISTANCE ANALYSIS

Figure 7 shows a sight distance analysis for the project driveways based on stopping sight distance. This sight distance analysis will be included in the traffic impact analysis.

VMT SCREENING ASSESSMENT

The project VMT impact has been assessed in accordance with guidance from the Final City of Calimesa Transportation Impact Analysis Guidelines for Vehicle Miles Traveled and Level of Service Assessment (May 2020) ["City of Calimesa TIA Guidelines"].

550 Parkcenter Drive, Suite 202, Santa Ana, CA 92705
(714) 795-3100 | www.ganddini.com

The City of Calimesa TIA Guidelines provide screening thresholds for certain types of projects that may be presumed to cause a less than significant VMT impact based on substantial evidence provided in the OPR Technical Advisory, or projects that are local serving and thus, by definition, reduce VMT by decreasing the number or distance of trips.

The City of Calimesa TIA Guidelines provide the following three screening steps: 1) Transit Priority Area (TPA) Screening; 2) Low VMT Area Screening; and 3) Project Type Screening.

TRANSIT PRIORITY AREA (TPA) SCREENING

Projects located within a TPA (half mile area around an existing major transit stop or an existing stop along a high quality transit corridor) may be presumed to have a less than significant impact absent substantial evidence to the contrary. This presumption may not be appropriate if the project:

1. Has a Floor Area Ration (FAR) of less than 0.75;
2. Includes more parking for use by residents, customers, or employees of the project than required by the jurisdiction (if the jurisdiction requires the project to supply parking)
3. Is inconsistent with the applicable Sustainable Communities Strategy (as determined by the City Traffic Engineer, with input from the Metropolitan Planning Organization): or
4. Replaces affordable residential units with a smaller number of moderate or high-income residential units.

The Western Riverside Council of Governments (WRCOG) VMT Screening Tool was used to determine if the project is located within a TPA. Based on review of the WRCOG VMT Screening Tool, the proposed project is not located within a TPA; therefore, the proposed project cannot be presumed to result in a less than significant VMT impact under this screening criteria.

LOW VMT AREA SCREENING

Residential and office projects located within a low VMT generating area may be presumed to have a less than significant impact absent substantial evidence to the contrary. In addition, other employment-related and mixed-use land use projects may qualify for the use of screening if the project can reasonably be expected to generate VMT per resident, per worker, or per service population that is similar to the existing land uses in the low VMT area.

The WRCOG VMT Screening Tool was used assess low VMT area screening for the project. The WRCOG VMT Screening Tool was developed using the RIVTAM travel forecasting model to measure VMT performance for individual jurisdictions and for individual traffic analysis zones (TAZs) within the WRCOG region. TAZs are geographic polygons similar to census block groups used to represent areas of homogenous travel behavior. Total daily VMT per service population (population plus employment) was estimated for each TAZ. This presumption may not be appropriate if the project land uses would alter the existing built environment in such a way as to increase the rate or length of vehicle trips.

The City of Calimesa General Plan Buildout VMT threshold is 37.3 VMT per service population. The baseline project TAZ VMT is 35.09 VMT per service population.

Based on review of the WRCOG VMT Screening Tool, the proposed project is located within a low VMT area; therefore, the proposed project cannot be presumed to result in a less than significant VMT impact under this screening criteria.

PROJECT TYPE SCREENING

Some project types have been identified as having the presumption of a less than significant impact as they are local serving by nature, or they are small enough to not warrant assessment. The following uses can be presumed to have a less than significant impact absent substantial evidence to the contrary as their uses are local serving in nature:

- Local serving K-12 schools
- Local parks
- Day care centers
- Local-serving gas stations
- Local-serving banks
- Local-serving hotels (e.g. non-destination hotels)
- Student housing projects
- Local-serving medical facilities
- Local serving community colleges that are consistent with the assumptions noted in the RTP/SCS
- Projects generating less than 110 daily vehicle trips. This generally corresponds to the following "typical" development potentials:
  - 11 single family housing units
  - 16 multi-family, condominiums, or townhouse housing units
  - 10,000 square feet of office
  - 15,000 square feet of light industrial
  - 63,000 square feet of warehousing
  - 79,000 square feet of high-cube transload and short-term storage warehouse

The OPR Technical Advisory contains guidance indicating that local-serving retail, defined as less than 50,000 square feet, would typically shorten trips and reduce VMT. New retail development typically redistributes shopping trips rather than creating new trips. By adding retail opportunities into the urban fabric and thereby improving proximity, local-serving retail tends to shorten trips and reduce VMT.

Based on review of project type screening, the proposed project does meet project type screening since the project is local-serving retail and local-serving gas stations land uses; therefore, the proposed project can be presumed to result in a less than significant VMT impact under this screening criteria.

SCREENING ASSESSMENT FINDING

The proposed project does meet the City-established VMT screening criteria for low VMT area screening and project type screening; therefore, a detailed VMT analysis is not required for the proposed project.

need to document all in report APPENDIX

Table 1
Project Trip Generation

Trip Generation Rates									
			AM Peak Hour			PM Peak Hour			Daily
Land Use	Source[1]	Units[2]	% In	% Out	Rate	% In	% Out	Rate	Rate
Convenience Market with Gasoline Pumps	ITE 853	FP	50%	50%	20.76	50%	50%	23.04	322.50
Diesel Fueling Facility/Gas Station	ITE 944	FP	50%	50%	10.28	50%	50%	14.03	172.01
Fast-Food Restaurant with Drive-Thru	ITE 934	TSF	51%	49%	40.19	52%	48%	32.67	470.95

Trips Generated									
			AM Peak Hour			PM Peak Hour			
Land Use	Quantity	Units[2]	In	Out	Total	In	Out	Total	Daily
Convenience Market with Gasoline Pumps[3]	8	FP	83	83	166	92	92	184	2,580
Diesel Fueling Facility/Gas Station[4]	4	FP	21	21	42	28	28	56	688
Fast-Food Restaurant with Drive-Thru	1.772	TSF	36	35	71	30	28	58	835
Subtotal			140	139	279	150	148	298	4,103
Internal Capture (10%)[5]			-14	-14	-28	-15	-15	-30	-410
Total			126	125	251	135	133	268	3,693

Notes:

(1) ITE = Institute of Transportation Engineers, Trip Generation Manual, 10th Edition, 2017; XXX= Land Use Code

(2) VFP = Vehicle Fueling Positions; TSF = Thousand Square Feet

(3) The total gross floor area for the convenience market and fast-food restaurant with drive-thru is 7,110 square feet. The convenience market is 3,849 square feet, the fast-food restaurant is 1,400 square feet, and the common area is 1,861 square feet. The common area consists of bathrooms, showers, laundry, storage, and a seating area for truckers. 80 percent of the common area has been allocated to the convenience center and 20 percent to the fast-food restaurant with drive-thru for trip generation purposes. Thus, the convenience market has been analyzed at 5,388 square feet and the fast-food restaurant with drive-thru has been analyzed at 1,772 square feet.

It should be noted that for trip generation purposes, the convenience market would be shared by the standard gas station pumps and the diesel fueling facility pumps.

(4) A passenger car equivalent (PCE) is a metric to assess the impact of larger vehicles, such as trucks, recreational vehicles, and buses, by converting the traffic volume of larger vehicles to an equivalent number of passenger cars. In consultation with City of Calimesa staff, the passenger car equivalent for a Semi-Truck/RV using the Diesel fueling facility would be 3.0. Thus, each trip generated by the Diesel fueling facility would be equivalent to 3 passenger cars.

However, it is important to note that the trip generation used in this report for the Diesel fueling facility is a very conservative estimate because the ITE trip generation rates for Land Use Code 944 represent the number of trips generated per vehicle fueling position at a standard passenger car fueling pump. ITE does not currently provide trip generation rates for a Diesel fueling facility In reality, the proposed Diesel fueling stations are likely to have a much lower service rate due to longer fueling times and lower demand compared to passenger cars. Furthermore, the trip generation forecast does not include reductions for pass-by trips.

For these reasons, the passenger car equivalent of 3.0 was not applied to the trip generation for the Diesel fueling facility.

(5) An internal capture of 10% was applied to account for interaction between the land uses.

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
4	7th St (NS) at Sandalwood Dr (EW)	All-way stop	HCM 6th Edition	NB Left	0.145	8.4	A
5	I-10 SB Ramps (NS) at Sandalwood Dr (EW)	All-way stop	HCM 6th Edition	SB Left	0.653	14.5	B
6	I-15 NB On-Ramp (NS) at Sandalwood Dr (EW)	Two-way stop	HCM 6th Edition	EB Left	0.025	10.8	B
7	Calimesa Blvd (NS) at Sandalwood Dr (EW)	Signalized	HCM 6th Edition	SB Left	0.566	26.3	C
8	I-10 NB Off-Ramp (NS) at Calimesa Blvd (EW)	All-way stop	HCM 6th Edition	NB Thru	0.816	17.5	C

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 4: 7th St (NS) at Sandalwood Dr (EW)

Control Type:	All-way stop	Delay (sec / veh):	8.4
Analysis Method:	HCM 6th Edition	Level Of Service:	A
Analysis Period:	1 hour	Volume to Capacity (v/c):	0.145

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
4	7th St (NS) at Sandalwood Dr (EW)	All-way stop	HCM 6th Edition	WB Left	0.113	7.9	A
5	I-10 SB Ramps (NS) at Sandalwood Dr (EW)	All-way stop	HCM 6th Edition	SB Left	0.511	11.2	B
6	I-15 NB On-Ramp (NS) at Sandalwood Dr (EW)	Two-way stop	HCM 6th Edition	EB Left	0.016	8.9	A
7	Calimesa Blvd (NS) at Sandalwood Dr (EW)	Signalized	HCM 6th Edition	SB Left	0.350	19.4	B
8	I-10 NB Off-Ramp (NS) at Calimesa Blvd (EW)	All-way stop	HCM 6th Edition	NB Thru	0.481	9.6	A

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
4	7th St (NS) at Sandalwood Dr (EW)	All-way stop	HCM 6th Edition	NB Left	0.238	9.0	A
5	I-10 SB Ramps (NS) at Sandalwood Dr (EW)	All-way stop	HCM 6th Edition	SB Left	0.630	13.7	B
6	I-15 NB On-Ramp (NS) at Sandalwood Dr (EW)	Two-way stop	HCM 6th Edition	EB Left	0.058	9.5	A
7	Calimesa Blvd (NS) at Sandalwood Dr (EW)	Signalized	HCM 6th Edition	SB Left	0.409	20.5	C
8	I-10 NB Off-Ramp (NS) at Calimesa Blvd (EW)	All-way stop	HCM 6th Edition	NB Thru	0.565	10.5	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	7th St (NS) at Project North Dwy (EW)	Two-way stop	HCM 6th Edition	WB Left	0.116	10.6	B
2	7th St (NS) at Project Central Dwy (EW)	Two-way stop	HCM 6th Edition	WB Left	0.050	10.9	B
3	7th St (NS) at Project South Dwy (EW)	Two-way stop	HCM 6th Edition	SB Thru	0.002	0.0	A
4	7th St (NS) at Sandalwood Dr (EW)	All-way stop	HCM 6th Edition	SB Thru	0.371	11.0	B
5	I-10 SB Ramps (NS) at Sandalwood Dr (EW)	All-way stop	HCM 6th Edition	WB Left	0.847	25.4	D
6	I-15 NB On-Ramp (NS) at Sandalwood Dr (EW)	Two-way stop	HCM 6th Edition	EB Left	0.190	13.1	B
7	Calimesa Blvd (NS) at Sandalwood Dr (EW)	Signalized	HCM 6th Edition	SB Left	0.959	28.6	C
8	I-10 NB Off-Ramp (NS) at Calimesa Blvd (EW)	All-way stop	HCM 6th Edition	NB Thru	0.937	32.0	D

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	7th St (NS) at Project North Dwy (EW)	Two-way stop	HCM 6th Edition	WB Left	0.130	10.6	B
2	7th St (NS) at Project Central Dwy (EW)	Two-way stop	HCM 6th Edition	WB Left	0.039	10.8	B
3	7th St (NS) at Project South Dwy (EW)	Two-way stop	HCM 6th Edition	SB Thru	0.002	0.0	A
4	7th St (NS) at Sandalwood Dr (EW)	All-way stop	HCM 6th Edition	SB Thru	0.338	10.4	B
5	I-10 SB Ramps (NS) at Sandalwood Dr (EW)	All-way stop	HCM 6th Edition	WB Left	0.749	17.7	C
6	I-15 NB On-Ramp (NS) at Sandalwood Dr (EW)	Two-way stop	HCM 6th Edition	EB Left	0.111	10.2	B
7	Calimesa Blvd (NS) at Sandalwood Dr (EW)	Signalized	HCM 6th Edition	SB Left	0.427	21.4	C
8	I-10 NB Off-Ramp (NS) at Calimesa Blvd (EW)	All-way stop	HCM 6th Edition	NB Thru	0.616	11.3	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

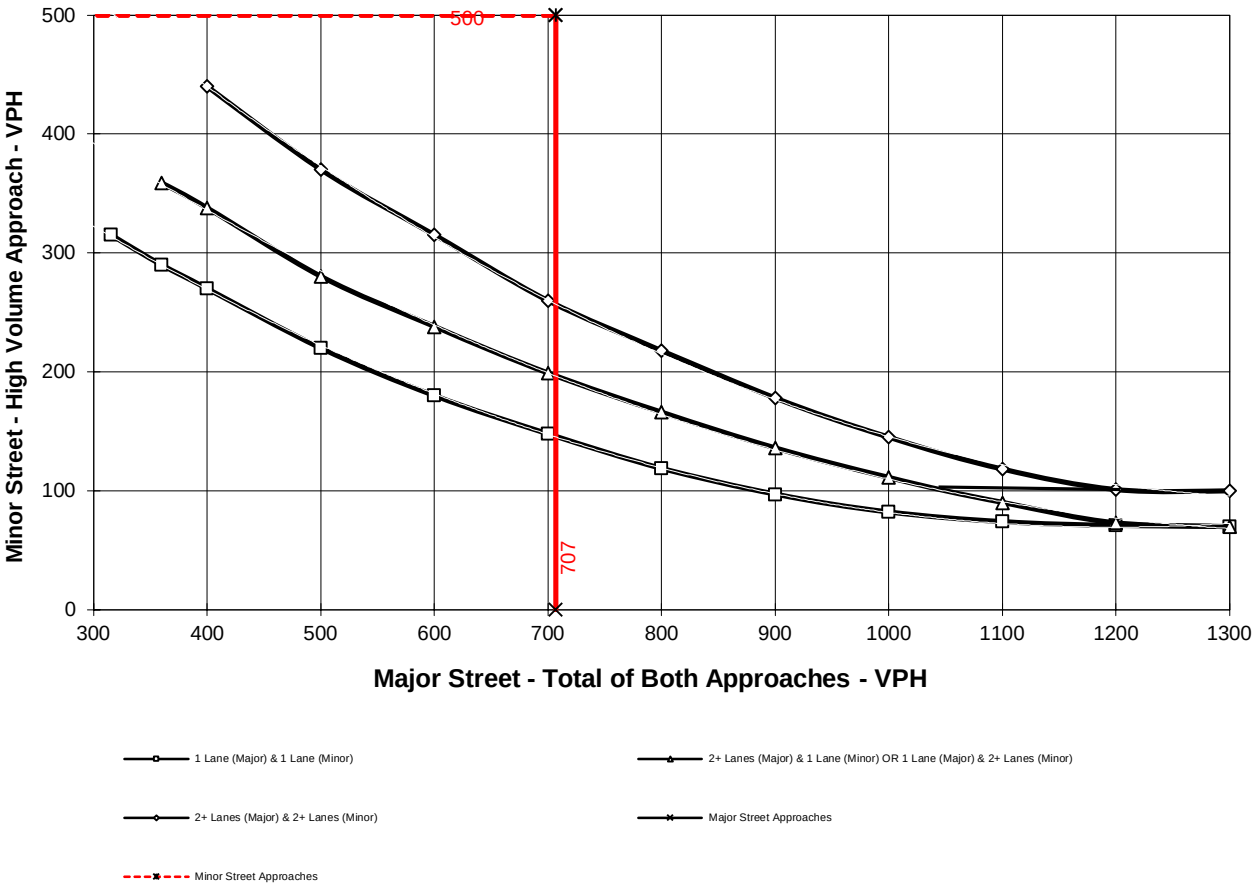
PEAK HOUR VOLUME WARRANT
(Rural Areas)

Existing AM Peak Hour



Major Street Name = **Calimesa Boulevard** Total of Both Approaches (VPH) = **707**

Number of Approach Lanes Major Street = **1**

Minor Street Name = **I-10 NB Off-Ramp** High Volume Approach (VPH) = **625**

Number of Approach Lanes Minor Street = **2**

WARRANTED FOR A SIGNAL

* NOTE:

Warrant includes adjustments to right turning movements from the minor approach consistent with CAMUTCD procedures.

** NOTE:

100 VPH APPLIES AS THE LOWER THRESHOLD VOLUME FOR A MINOR STREET APPROACH WITH TWO OR MORE LANES AND 75 VPH APPLIES AS THE LOWER THRESHOLD VOLUME FOR A MINOR STREET APPROACHING WITH ONE LANE.

APPENDIX F

SIGHT DISTANCE STANDARDS

CHAPTER 200 – GEOMETRIC DESIGN AND STRUCTURE STANDARDS

Topic 201 – Sight Distance

Index 201.1 – General

Sight distance is the continuous length of highway ahead, visible to the highway user. Four types of sight distance are considered herein: passing, stopping, decision, and corner. Passing sight distance is used where use of an opposing lane can provide passing opportunities (see Index 201.2). Stopping sight distance is the minimum sight distance for a given design speed to be provided on multilane highways and on 2-lane roads when passing sight distance is not economically obtainable. Stopping sight distance also is to be provided for all users, including motorists and bicyclists, at all elements of interchanges and intersections at grade, including private road connections (see Topic 504, Index 405.1, & Figure 405.7). Decision sight distance is used at major decision points (see Indexes 201.7 and 504.2). Corner sight distance is used at intersections (see Index 405.1, Figure 405.7, and Figure 504.3I).

Table 201.1 shows the minimum standards for stopping sight distance related to design speed for motorists. Stopping sight distances given in the table are suitable for Class II and Class III bikeways. The stopping sight distances are also applicable to roundabout design on the approach roadway, within the circulatory roadway, and on the exits prior to the pedestrian crossings. Also shown in Table 201.1 are the values for use in providing passing sight distance.

See Chapter 1000 for Class I bikeway sight distance guidance.

Chapter 3 of "A Policy on Geometric Design of Highways and Streets," AASHTO, contains a thorough discussion of the derivation of stopping sight distance.

201.2 Passing Sight Distance

Passing sight distance is the minimum sight distance required for the driver of one vehicle to pass another vehicle safely and comfortably. Passing must be accomplished assuming an oncoming vehicle comes into view and maintains the design speed, without reduction, after the overtaking maneuver is started.

Table 201.1

Sight Distance Standards

Design Speed[1] (mph)	Stopping[2] (ft)	Passing (ft)
10	50	---
15	100	---
20	125	800
25	150	950
30	200	1,100
35	250	1,300
40	300	1,500
45	360	1,650
50	430	1,800
55	500	1,950
60	580	2,100
65	660	2,300
70	750	2,500
75	840	2,600
80	930	2,700

Notes:

[1]See Topic 101 for selection of design speed.

[2]For sustained downgrades, refer to underlined standard in Index 201.3

The sight distance available for passing at any place is the longest distance at which a driver whose eyes are 3 ½ feet above the pavement surface can see the top of an object 4 ¼ feet high on the road. See Table 201.1 for the calculated values that are associated with various design speeds.

In general, 2-lane highways should be designed to provide for passing where possible, especially those routes with high volumes of trucks or recreational vehicles. Passing should be done on tangent horizontal alignments with constant grades or a slight sag vertical curve. Not only are drivers reluctant to pass on a long crest vertical curve, but it is impracticable to design crest vertical curves to provide for passing sight distance because of high cost where crest cuts are involved. Passing sight distance for crest vertical curves is 7 to 17 times longer than the stopping sight distance.

Ordinarily, passing sight distance is provided at locations where combinations of alignment and profile do not require the use of crest vertical curves.

Passing sight distance is considered only on 2-lane roads. At critical locations, a stretch of 3- or 4-lane passing section with stopping sight distance is sometimes more economical than two lanes with passing sight distance.

Passing on sag vertical curves can be accomplished both day and night because headlights can be seen through the entire curve.

See Part 3 of the California Manual on Uniform Traffic Control Devices (California MUTCD) for criteria relating to the placement of barrier striping for no-passing zones. Note, that the passing sight distances shown in the California MUTCD are based on traffic operational criteria. Traffic operational criteria are different from the design characteristics used to develop the values provided in Table 201.1 and Chapter 3 of AASHTO, A Policy on Geometric Design of Highways and Streets. The aforementioned table and AASHTO reference are also used to design the vertical profile and horizontal alignment of the highway. Consult the District Traffic Engineer or designee when using the California MUTCD criteria for traffic operating-control needs.

Other means for providing passing opportunities, such as climbing lanes or turnouts, are discussed in Index 204.5. Chapter 3 of AASHTO, A Policy on Geometric Design of Highways and Streets, contains a thorough discussion of the derivation of passing sight distance.

201.3 Stopping Sight Distance

The minimum stopping sight distance is the distance required by the user, traveling at a given speed, to bring the vehicle or bicycle to a stop after an object ½-foot high on the road becomes visible. Stopping sight distance for motorists is measured from the driver's eyes, which are assumed to be 3 ½ feet above the pavement surface, to an object ½-foot high on the road. See Index 1003.1(10) for Class I bikeway stopping sight distance guidance.

The stopping sight distances in Table 201.1 should be increased by 20 percent on sustained downgrades steeper than 3 percent and longer than one mile.

201.4 Stopping Sight Distance at Grade Crests

Figure 201.4 shows graphically the relationships between length of highway crest vertical curve, design speed, and algebraic difference in grades. Any one factor can be determined when the other two are known.

201.5 Stopping Sight Distance at Grade Sags

From the curves in Figure 201.5, the minimum length of vertical curve which provides headlight sight distance in grade sags for a given design speed can be obtained.

If headlight sight distance is not obtainable at grade sags, lighting may be considered. The District approval authority or Project Delivery Coordinator, depending upon the current District Design Delegation Agreement, and the District Traffic Engineer or designee shall be contacted to review proposed grade sag lighting to determine if such use is appropriate.

201.6 Stopping Sight Distance on Horizontal Curves

Where an object off the pavement such as a bridge pier, building, cut slope, or natural growth restricts sight distance, the minimum radius of curvature is determined by the stopping sight distance.

Available stopping sight distance on horizontal curves is obtained from Figure 201.6. It is assumed that the driver's eye is 3 ½ feet above the center of the inside lane (inside with respect to curve) and the object is ½-foot high. The line of sight is assumed to intercept the view obstruction at the midpoint of the sight line and 2 feet above the center of the inside lane when the road profile is flat (i.e. no vertical curve). Crest vertical curves can cause additional reductions in sight distance. The clear distance (*m*) is measured from the center of the inside lane to the obstruction.

The design objective is to determine the required clear distance from centerline of inside lane to a retaining wall, bridge pier, abutment, cut slope, or other obstruction for a given design speed. Using radius of curvature and minimum sight distance for that design speed, Figure 201.6 gives the clear distance (*m*) from centerline of inside lane to the obstruction.

See Index 1003.1(13) for bikeway stopping sight distance on horizontal curve guidance.

When the radius of curvature and the clear distance to a fixed obstruction are known, Figure 201.6 also gives the sight distance for these conditions.

See Index 101.1 for technical reductions in design speed caused by partial or momentary horizontal sight distance restrictions. See Index 203.2 for additional comments on glare screens.

Cuts may be widened where vegetation restricting horizontal sight distance is expected to grow on finished slopes. Widening is an economic trade-off that must be evaluated along with other options. See Topic 902 for sight distance requirements on landscape projects.

201.7 Decision Sight Distance

At certain locations, sight distance greater than stopping sight distance is desirable to allow drivers time for decisions without making last minute erratic maneuvers (see Chapter III of AASHTO, A Policy on Geometric Design of Highways and Streets, for a thorough discussion of the derivation of decision sight distance.)

On freeways and expressways the decision sight distance values in Table 201.7 should be used at lane drops and at off-ramp noses to interchanges, branch connections, safety roadside rest areas, vista points, and inspection stations. When determining decision sight distance on horizontal and vertical curves, Figures 201.4, 201.5, and 201.6 can be used. Figure 201.7 is an expanded version of Figure 201.4 and gives the relationship among length of crest vertical curve, design speed, and algebraic difference in grades for much longer vertical curves than Figure 201.4.

Decision sight distance is measured using the 3 ½-foot eye height and ½-foot object height. See Index 504.2 for sight distance at secondary exits on a collector-distributor road.

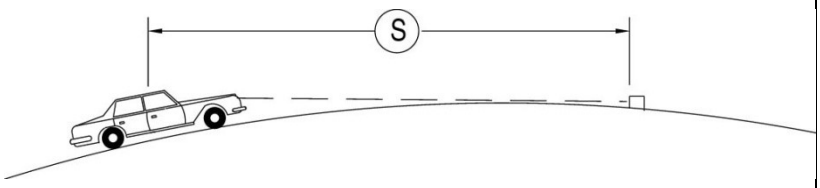
Table 201.7

Decision Sight Distance

Design Speed(mph)	Decision Sight Distance(ft)
30	450
35	525
40	600
45	675
50	750
55	865
60	990
65	1,050
70	1,105
75	1,180
80	1,260

Topic 202 – Superelevation

202.1 Basic Criteria



When a vehicle moves in a circular path, it undergoes a centripetal acceleration that acts toward the center of curvature. This force is countered by the perceived centrifugal force experienced by the motorist.

On a superelevated highway, this force is resisted by the vehicle weight component parallel to the superelevated surface and by the side friction developed between the tires and pavement. It is impractical to balance centrifugal force by superelevation alone, because for any given curve radius a certain superelevation rate is exactly correct for only one driving speed. At all other speeds there will be a side thrust either outward or inward, relative to the curve center, which must be offset by side friction.

If the vehicle is not skidding, these forces are in equilibrium as represented by the following simplified curve equation, which is used to design a curve for a comfortable operation at a particular speed:

Figure 201.4

Stopping Sight Distance on Crest Vertical Curves

Drivers eye height is 3 ½ feet.
Object height is ½-foot.

L = Curve Length (feet)

A = Algebraic Grade Difference (%)

S = Sight Distance (feet)

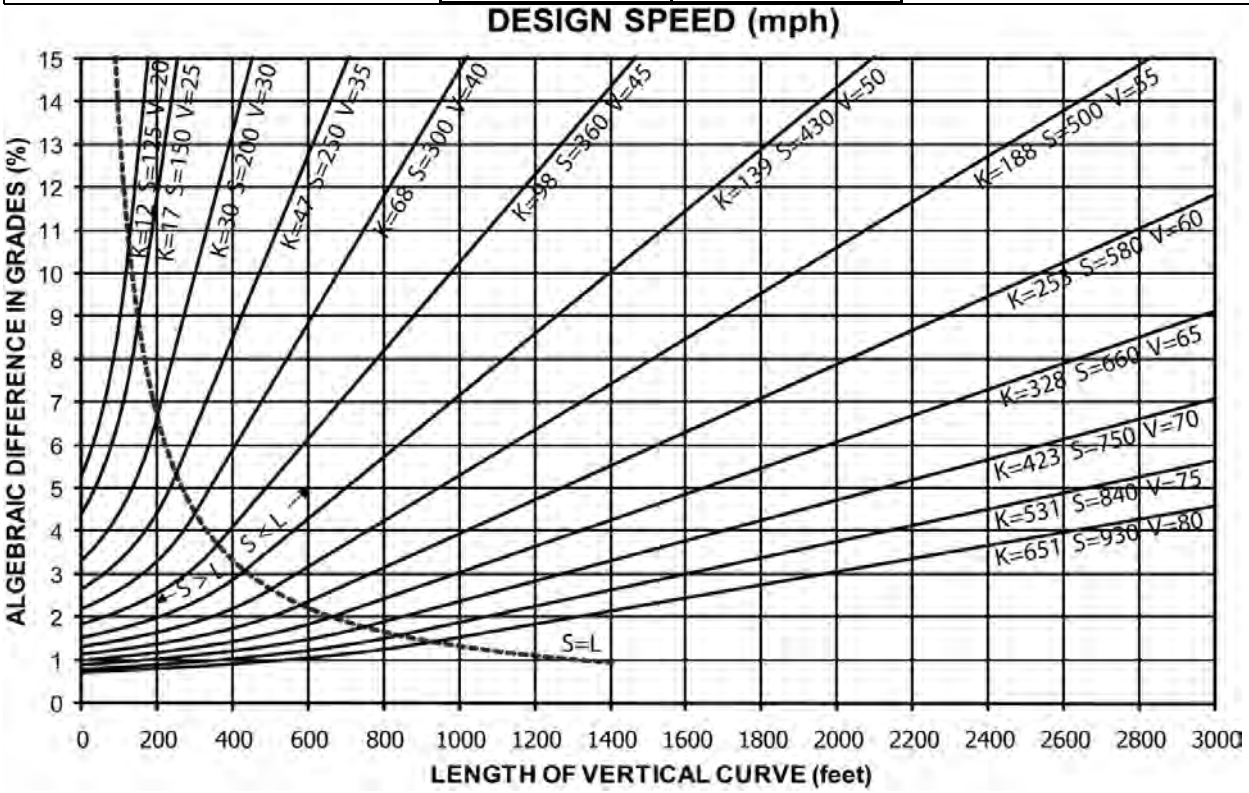
V = Design Speed for "S" in mph

K = Distance in feet required to achieve a 1% change in grade. K value as shown on graph is valid when S < L.

Notes:

- Before using this figure for intersections, branch connections and exits, see Indexes 201.7 and 405.1, and Topic 504.
- See Figure 204.4 for vertical curve formulas.
- See Index 204.4 for minimum length of vertical curve

When S > L	When S < L
L = 2S – 1329/A	$L = AS^2 /1329$



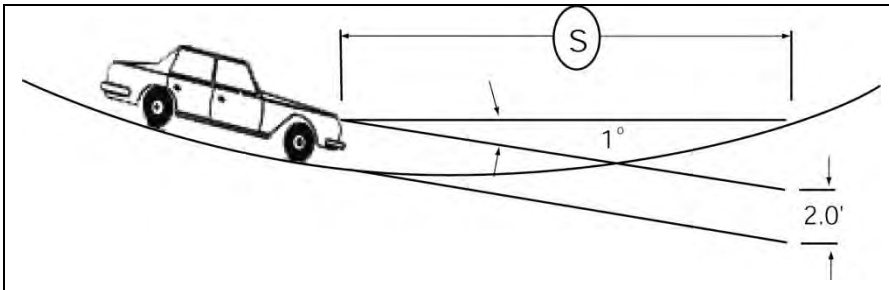


Figure 201.5

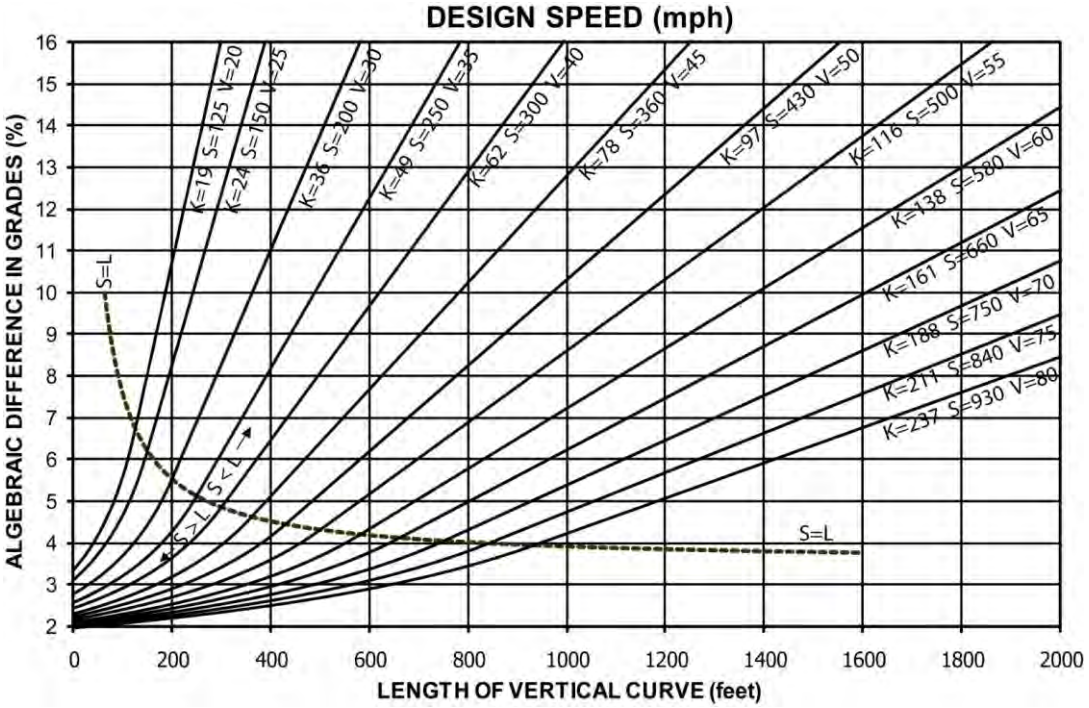
Stopping Sight Distance on Sag Vertical Curves

L = Curve Length (feet)
A = Algebraic Grade Difference (%)
S = Sight Distance (feet)
V = Design Speed for "S" in mph
K = Distance in feet required to achieve a 1% change in grade. K value as shown on graph is valid when S < L.

Notes:

- For sustained downgrades, see Index 201.3.
- Before using this figure for intersections, branch connections and exits, see Indexes 201.7 and 405.1, and Topic 504.
- See Figure 204.4 for vertical curve formulas.
- See Index 204.4 for minimum length of vertical curve.

When S > L	When S < L
$L = 2S - (400 + 3.5S)/A$	$L = AS^2/(400 + 3.5S)$



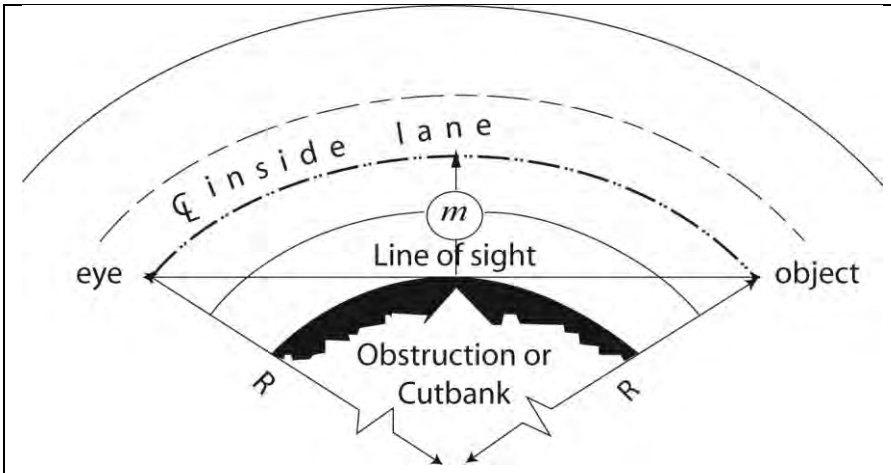


Figure 201.6

Stopping Sight Distance on Horizontal Curves

Line of sight is 2.0 feet above the centerline inside lane at point of obstruction.

R = Radius of the centerline of the lane nearest the obstruction (feet).

S = Sight Distance (feet)

V = Design Speed for "S" in mph

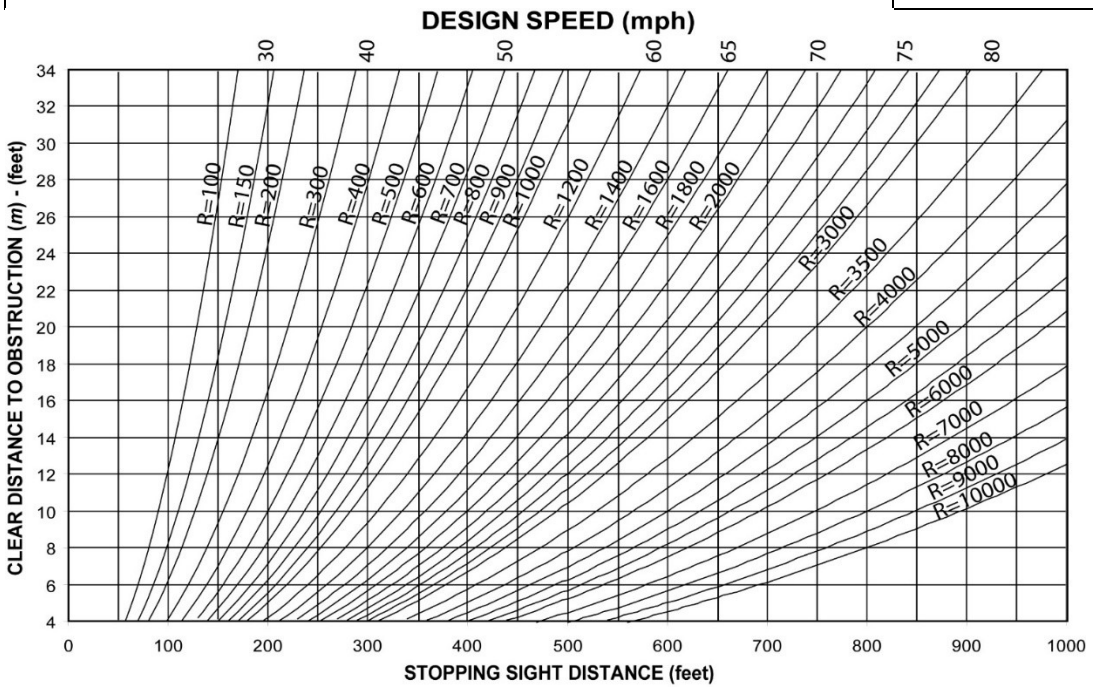
m = Clear distance from centerline of the lane nearest the obstruction (feet).

Notes:

- For sustained downgrades, see Index 201.3.
- Formulas apply only when "S" is equal to or less than length of curve.
- Angles in formulas are expressed in degrees.

$$m = R\left[1 - \cos\left(\frac{28.65S}{R}\right)\right]$$

$$S = \frac{R}{28.65}\left[\cos^{-1}\left(\frac{R - m}{R}\right)\right]$$



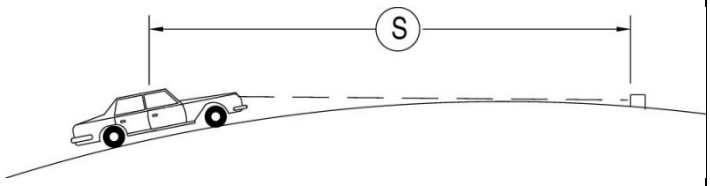


Figure 201.7

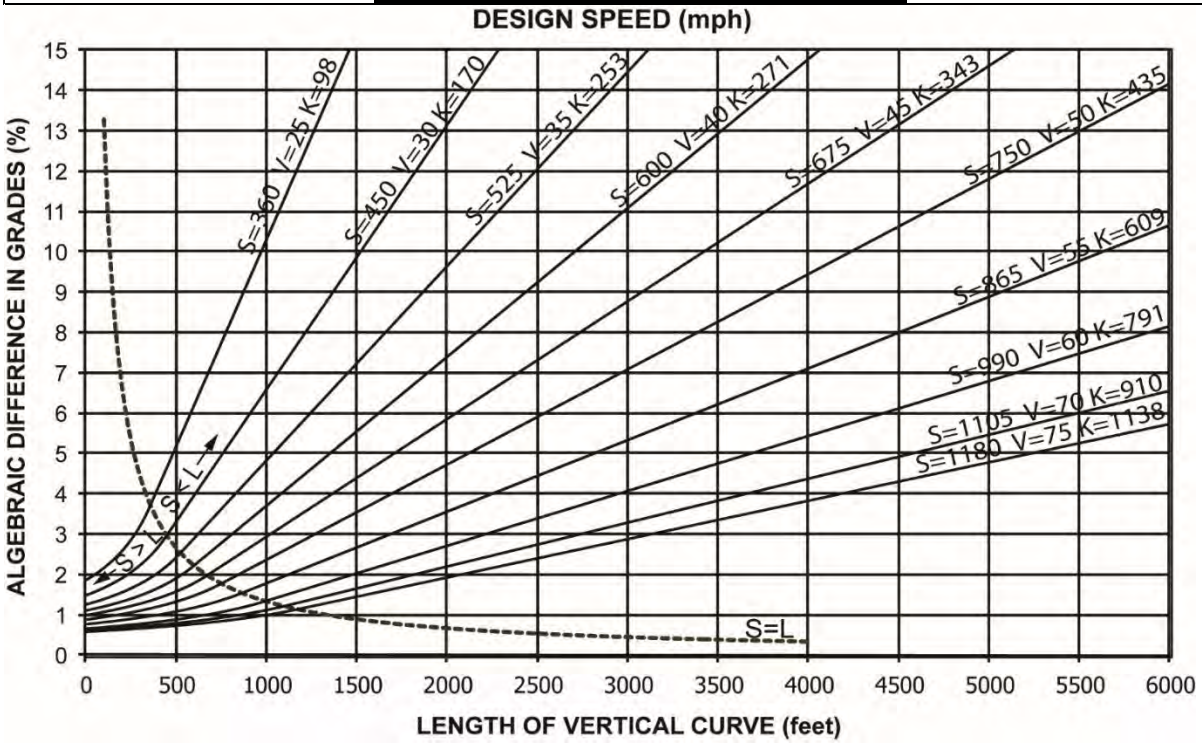
Decision Sight Distance on Crest Vertical Curves

Drivers eye height is 3½ feet.
Object height is ½-foot.

L = Curve Length (feet)

A = Algebraic Grade Difference (%)

S = Sight Distance (feet)



V = Design Speed for "S" in mph

K = Distance in feet required to achieve a 1% change in grade. K value as shown on graph is valid when S < L.

Notes:

- Before using this figure for intersections, branch connections and exits, see Indexes 201.7 and 405.1, and Topic 504.
- See Figure 204.4 for vertical curve formulas.
- See Index 204.4 for minimum length of vertical curve.

When S > L	When S < L
$L = 2S - 1329/A$	$L = AS^2/1329$

$$e+f = \frac{0.067V^2}{R} = \frac{V^2}{15R}$$

Where:

e = Roadway superelevation slope, feet per foot
f = Side friction factor
R = Curve radius, feet
V = Vehicle speed, miles per hour

Standard superelevation rates are designed to hold the portion of the centrifugal force that must be taken up by tire friction within allowable limits. Friction factors as related to speed are shown on Figure 202.2. The factors apply equally to flexible and rigid pavements.

202.2 Standards for Superelevation

(1) Highways. Maximum superelevation rates for various highway conditions are shown in Tables 202.2A through 202.2E. The maximum rates of superelevation (e_{max}) used on highways are controlled by four factors: climate conditions (i.e., frequency and amount of snow and ice); terrain conditions (i.e., flat, rolling, or mountainous); type of area (i.e., rural or urban); and frequency of slow-moving vehicles whose operations might be affected by high superelevation rates. Consideration of these factors jointly leads to the conclusion that no single maximum superelevation rate is universally applicable.

The highest superelevation rate for highways in common use is 10 percent, although 12 percent is used in some cases. Superelevation rates above 8 percent are only used in areas without snow and ice. Although higher superelevation rates offer an advantage to vehicles at high speeds, current practice considers that rates in excess of 12 percent are beyond practical limits. This practice recognizes the combined effects of construction processes, maintenance difficulties, and operation of vehicles at low speeds.

Where traffic congestion or the clustered land use of developing corridors (i.e., industrial, commercial, and residential) restricts top speeds, it is common practice to utilize a lower maximum rate of superelevation (typically 4 to 6 percent). Similarly, either a low maximum rate of superelevation or no superelevation is employed within intersection areas or where there is a tendency to drive slowly because of turning and crossing movements, warning devices, and signals. In these areas it is difficult to warp crossing pavements for drainage without providing negative superelevation for some turning movements. Therefore, use of Tables 202.2D and 202.2E for urban roads may not apply in these locations.

Roadways described below, (a) through (e), shall be designed with the e_{max} indicated. Design of local roads should generally use (d) and (e).

(a) Use e_{max}=12% for ramps, connectors, 2-lane conventional highways, and frontage roads. See Index 202.7 for frontage roads under other jurisdictions.

(b) Use e_{max}=10% for freeways, expressways, and multilane conventional highways.

(c) Use e_{max}=8% when snow and ice conditions prevail (usually over 3,000 feet elevation).

(d) Use e_{max}=6% for urban roads with design speeds 35 to 45 miles per hour.

(5) Lock To Lock Time - The time in seconds that an average driver would take under normal driving conditions to turn the steering wheel of a vehicle from the lock position on one side to the lock position on the other side. The default in AutoTurn software is 6 seconds.

(6) Steering Lock Angle - The maximum angle that the steering wheels can be turned. It is further defined as the average of the maximum angles made by the left and right steering wheels with the longitudinal axis of the vehicle.

(7) Articulating Angle - The maximum angle between the tractor and semitrailer.

Topic 405 – Intersection Design Standards

405.1 Sight Distance

(1) Stopping Sight Distance. See Index 201.1 for minimum stopping sight distance requirements.

(2) Corner Sight Distance.

(a) General. At unsignalized intersections a substantially clear line of sight should be maintained between the driver of a vehicle, bicyclist or pedestrian stopped on the minor road and the driver of an approaching vehicle on the major road that has no stop. Line of sight for all users should be included in right of way, in order to preserve sight lines.

See DIB 79 for 2R, 3R, certain storm damage, protective betterment, operational, and safety projects on two-lane and three-lane conventional highways.

Adequate time should be provided for the stopped vehicle on the minor road to either cross all lanes of through traffic, cross the near lanes and turn left, or turn right, without requiring through traffic to radically alter their speed. The visibility required for these maneuvers form a clear sight triangle with the corner sight distance b and the crossing distance a_1 or a_2 (see Figure 405.1 as an example of corner sight distance at a two-lane, two-way highway). Dimensions a_1 and a_2 are measured from the decision point to the center of the lane. The actual number of lanes will vary on the major and minor roads. There should be no sight obstruction within the clear sight triangle.

The methodology used for the driver on the minor road that is stopped to complete the necessary maneuver while the approaching vehicle travels at the design speed of the major road is based on gap-acceptance behavior. A 7-1/2 second criterion is applied to a passenger car (including pickup trucks) for a left turn from a stop on the minor road. However, this time gap does not account for a single-unit truck (no semitrailer), a combination truck (see Index 404.4 for truck tractor-semitrailer guidance), a right-turn from a stop, or for a crossing maneuver. See Table 405.1A for the time gap that addresses these situations for the assumed design vehicle making these maneuvers from the minor road.

In determining corner sight distance, a set back distance for the vehicle waiting on the minor road must be assumed as measured from the edge of traveled way of the major road. Set back for the driver of the vehicle on the minor road should be a minimum of 10 feet plus the shoulder width of the major road but not less than 15 feet. The location of the driver's eye for the set back is the decision point per Figure 405.1. Corner sight distance and the driver's eye set back are also illustrated in Figures 405.7 and 504.3I. Line of sight for corner sight distance for passenger cars is to be determined from a 3 and 1/2-foot height at the location of the driver of the vehicle in the center of the minor road lane to a 3 and 1/2-foot object height in the center of the approaching outside lane of the major road. This provides for reciprocal sight by both vehicles. The passenger

car driver's eye height should be applied to all minor roads. In addition, a truck driver's eye height of 7.6 feet should be applied to the minor road where applicable. Additionally, if the major road has a median barrier, a 2-foot object height should be used to determine the median barrier set back. A median that is wide enough to accommodate a stopped vehicle should also provide a clear sight triangle.

The minimum corner sight distance (feet) should be determined by the equation: $1.47V_mT_g$, where V_m is the design speed (mph) of the major road and T_g is the time gap (seconds) for the minor road vehicle to enter the major road. The values given in Table 405.1A should be used to determine T_g based on the design vehicle, the type of maneuver, and whether the stopped vehicle's rear wheels are on an upgrade exceeding 3 percent. The distance from the edge of traveled way to the rear wheels at the minor road stop location should be assumed as: 20 feet for a passenger car, 30 feet for a single-unit truck, and 72 feet for a combination truck.

(b) Public Road Intersections (Refer to Topic 205 and Index 405.7); corner sight distance applies, see Table 405.1A.

At signalized intersections the corner sight distances should also be applied whenever possible. Even though traffic flows are designed to move at separate times, unanticipated conflicts can occur due to violation of signal, right turns on red, malfunction of the signal, or use of flashing red/yellow mode.

The minimum value for corner sight distance at signalized intersections should be equal to the stopping sight distance as given in Table 201.1, measured as previously described. This includes an urban driveway that forms a leg of the signalized intersection.

(c) Private Road Intersections (Refer to Index 205.2) and Rural Driveways (Refer to Index 205.4); corner sight distance applies, see Table 405.1A. If signalized, the minimum corner sight distance should be equal to the stopping sight distance as given in Table 201.1, measured as previously described.

(d) Urban Driveways (Refer to Index 205.3); corner sight distance requirements as described above are not applied to urban driveways unless signalized. See Index 405.1(2)(b) underlined standard. If parking is allowed on the major road, parking should be prohibited on both sides of the driveway per the California MUTCD, 3B.19.

(3) Decision Sight Distance. At intersections where the State route turns or crosses another State route, the decision sight distance values given in Table 201.7 should be used. In computing and measuring decision sight distance, the 3.5-foot eye height and the 0.5-foot object height should be used, the object being located on the side of the intersection nearest the approaching driver.

The application of the various sight distance requirements for the different types of intersections is summarized in Table 405.1B

Table 405.1B

Application of Sight Distance Requirements

Intersection Types	Sight Distance		
	Stopping	Corner	Decision
Private Roads	X	X[(1)]	
Public Streets and Roads	X	X	
Signalized Intersections	X	X[(2)]	
State Route Intersections & Route Direction Changes, with or without Signals	X	X	X

NOTES:

(1) Per Index 405.1(2)(c), the minimum corner sight distance shall be equal to the stopping sight distance as given in Table 201.1. See Index 405.1(2)(a) for setback requirements.

(2) Apply corner sight distance requirements at signalized intersections whenever possible due to unanticipated violations of the signals or malfunctions of the signals. See Index 405.1(2)(b).

(4) Acceleration Lanes for Turning Moves onto State Highways. At rural intersections, with "STOP" control on the local cross road, acceleration lanes for left and right turns onto the State facility should be considered. At a minimum, the following features should be evaluated for both the major highway and the cross road:

- divided versus undivided
- number of lanes
- design speed
- gradient
- lane, shoulder and median width
- traffic volume and composition of highway users, including trucks and transit vehicles

Figure 405.1
Corner Sight Distance (b)

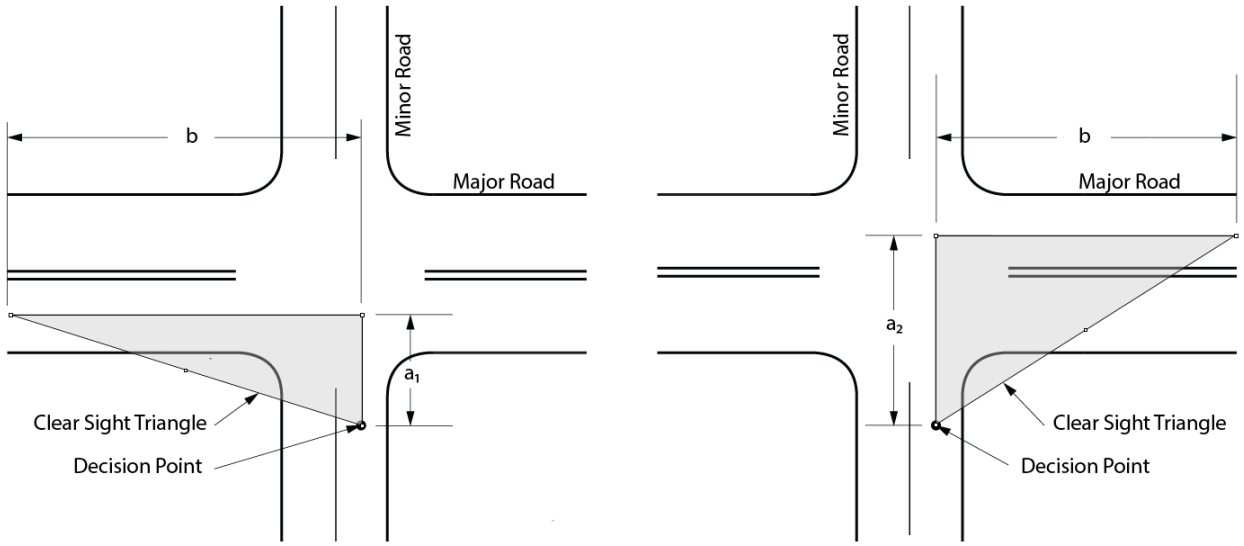


Table 405.1A
Corner Sight Distance Time Gap (T_g) for Unsignalized Intersections

Design Vehicle	Left-turn from Stop (s) (4)	Right-turn from Stop and Crossing Maneuver (s)
Passenger Car	7½	6½
Private Road Intersection		
Rural Driveway		
Single-Unit Truck	9½	8½
Public Road Intersection		
Combination Truck	11½	10½
Major and Minor Roads on Routes:		
National Network		
Terminal or Service Access		
California Legal		
KPRA Advisory		

Notes: Time gaps are for a stopped vehicle to turn left, right or cross a two-lane highway with no median and with minor road grades of 3 percent or less. The table values should be adjusted as follows:

(1)For multilane highways—When crossing or making a left-turn onto a two-way major road with more than two lanes, add 0.5 s for passenger cars or 0.7 s for trucks for each additional lane to be crossed. Median widths should be converted to an equivalent number of lanes in applying the 0.5 s and 0.7 s criteria. For example, an 18-foot wide median is equivalent to 1.5 lanes; this requires an additional 0.75 s for a passenger car to cross or an additional 1.05 s for a truck to cross.

(2)For minor road approach grades—If the minor road approach grade is an upgrade that exceeds 3 percent and the rear wheels of the design vehicle are on the grade exceeding 3 percent, add 0.2 s for each percent grade for left-turns and crossing maneuvers; or add 0.1 s for each percent grade for right-turns. For example, a passenger car is turning right from a minor road and at the stop location its rear wheels are on a 4 percent upgrade; this requires an additional 0.4 s for the right-turn.

(3)Unique situations may necessitate a different design vehicle for a particular minor road than those listed here (e.g., predominant combination trucks out of a rural driveway). Additionally, for intersections at skewed angles less than 60 degrees, a further adjustment is needed. See the AASHTO "A Policy on Geometric Design of Highways and Streets" for guidance.

(4)Time gap for vehicles approaching from the left can be the same as the right-turn from stop maneuver.

- turning volumes
- horizontal curve radii
- sight distance
- proximity of adjacent intersections
- types of adjacent intersections

For additional information and guidance, refer to AASHTO, A Policy on Geometric Design of Highways and Streets, the District Traffic Engineer or designee, the District Design Liaison, and the Project Delivery Coordinator.

405.2 Left-turn Channelization

(1) General. The purpose of a left-turn lane is to expedite the movement of through traffic by, controlling the movement of turning traffic, increasing the capacity of the intersection, and improving safety characteristics.

The District Traffic Branch normally establishes the need for left-turn lanes.

(2) Design Elements.

(a) Lane Width – **The lane width for both single and double left-turn lanes on State highways shall be 12 feet.**

For conventional State highways with posted speeds less than or equal to 40 miles per hour and AADTT (truck volume) less than 250 per lane that are in urban, city or town centers (rural main streets), the minimum lane width shall be 11 feet.

When considering lane width reductions adjacent to curbed medians, refer to Index 303.5 for guidance on effective roadway width, which may vary depending on drivers' lateral positioning and shy distance from raised curbs.

(b) Approach Taper – On conventional highways without a median, an approach taper provides space for a left-turn lane by moving traffic laterally to the right. The approach taper is unnecessary where a median is available for the full width of the left-turn lane. Length of the approach taper is given by the formula on Figures 405.2A, B and C.

Figure 405.2A shows a standard left-turn channelization design in which all widening is to the right of approaching traffic and the deceleration lane (see below) begins at the end of the approach taper. This design should be used in all situations where space is available, usually in rural and semi-rural areas or in urban areas with high traffic speeds and/or volumes.

Figures 405.2B and 405.2C show alternate designs foreshortened with the deceleration lane beginning at the 2/3 point of the approach taper so that part of the deceleration takes place in the through traffic lane. Figure 405.2C is shortened further by widening half (or other appropriate fraction) on each side. These designs may be used in urban areas where constraints exist, speeds are moderate and traffic volumes are relatively low.

APPENDIX G

VEHICLE MILES TRAVELED (VMT) ANALYSIS

VMT Screening Assessment

The project VMT impact has been assessed in accordance with guidance from the *Final City of Calimesa Transportation Impact Analysis Guidelines for Vehicle Miles Traveled and Level of Service Assessment* (May 2020) ["City of Calimesa TIA Guidelines"].

The City of Calimesa TIA Guidelines provide screening thresholds for certain types of projects that may be presumed to cause a less than significant VMT impact based on substantial evidence provided in the OPR Technical Advisory, or projects that are local serving and thus, by definition, reduce VMT by decreasing the number or distance of trips.

The City of Calimesa TIA Guidelines provide the following three screening steps: 1) Transit Priority Area (TPA) Screening; 2) Low VMT Area Screening; and 3) Project Type Screening.

Transit Priority Area (TPA) Screening

Projects located within a TPA (half mile area around an existing major transit stop or an existing stop along a high quality transit corridor) may be presumed to have a less than significant impact absent substantial evidence to the contrary. This presumption may not be appropriate if the project:

1. Has a Floor Area Ration (FAR) of less than 0.75;
2. Includes more parking for use by residents, customers, or employees of the project than required by the jurisdiction (if the jurisdiction requires the project to supply parking)
3. Is inconsistent with the applicable Sustainable Communities Strategy (as determined by the City Traffic Engineer, with input from the Metropolitan Planning Organization): or
4. Replaces affordable residential units with a smaller number of moderate or high-income residential units.

The Western Riverside Council of Governments (WRCOG) VMT Screening Tool was used to determine if the project is located within a TPA. Based on review of the WRCOG VMT Screening Tool, the proposed project is not located within a TPA; therefore, the proposed project cannot be presumed to result in a less than significant VMT impact under this screening criteria.

Low VMT Area Screening

Residential and office projects located within a low VMT generating area may be presumed to have a less than significant impact absent substantial evidence to the contrary. In addition, other employment-related and mixed-use land use projects may qualify for the use of screening if the project can reasonably be expected to generate VMT per resident, per worker, or per service population that is similar to the existing land uses in the low VMT area.

The WRCOG VMT Screening Tool was used assess low VMT area screening for the project. The WRCOG VMT Screening Tool was developed using the RIVTAM travel forecasting model to measure VMT performance for individual jurisdictions and for individual traffic analysis zones (TAZs) within the WRCOG region. TAZs are geographic polygons similar to census block groups used to represent areas of homogenous travel behavior. Total daily VMT per service population (population plus employment) was estimated for each TAZ. This presumption may not be appropriate if the project land uses would alter the existing built environment in such a way as to increase the rate or length of vehicle trips.

The City of Calimesa General Plan Buildout VMT threshold is 37.3 VMT per service population. The baseline project TAZ VMT is 35.09 VMT per service population.

Based on review of the WRCOG VMT Screening Tool, the proposed project is located within a low VMT area; therefore, the proposed project can be presumed to result in a less than significant VMT impact under this screening criteria.

PROJECT TYPE SCREENING

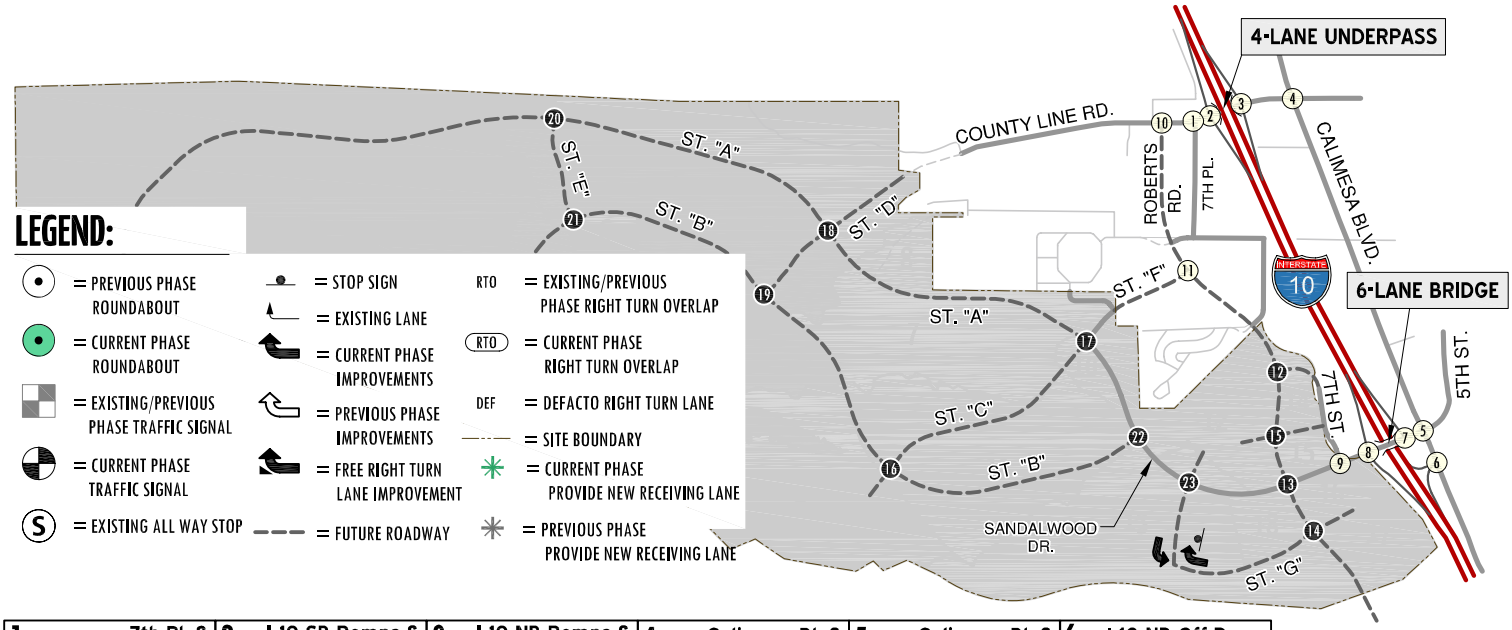
Some project types have been identified as having the presumption of a less than significant impact as they are local serving by nature, or they are small enough to not warrant assessment. The following uses can be presumed to have a less than significant impact absent substantial evidence to the contrary as their uses are local serving in nature:

- Local serving K-12 schools
- Local parks
- Day care centers
- Local-serving gas stations
- Local-serving banks
- Local-serving hotels (e.g. non-destination hotels)
- Student housing projects
- Local-serving medical facilities
- Local serving community colleges that are consistent with the assumptions noted in the RTP/SCS
- Projects generating less than 110 daily vehicle trips. This generally corresponds to the following "typical" development potentials:
  - 11 single family housing units
  - 16 multi-family, condominiums, or townhouse housing units
  - 10,000 square feet of office
  - 15,000 square feet of light industrial
  - 63,000 square feet of warehousing
  - 79,000 square feet of high-cube transload and short-term storage warehouse

The OPR Technical Advisory contains guidance indicating that local-serving retail, defined as less than 50,000 square feet, would typically shorten trips and reduce VMT. New retail development typically redistributes shopping trips rather than creating new trips. By adding retail opportunities into the urban fabric and thereby improving proximity, local-serving retail tends to shorten trips and reduce VMT.

Based on review of project type screening, the proposed project does meet project type screening since the project is local-serving retail and local-serving gas stations land uses; therefore, the proposed project can be presumed to result in a less than significant VMT impact under this screening criteria.

SCREENING ASSESSMENT FINDING



The proposed project does meet the City-established VMT screening criteria for low VMT area screening and project type screening; therefore, a detailed VMT analysis is not required for the proposed project.

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
4	7th St (NS) at Sandalwood Dr (EW)	Signalized	HCM 6th Edition	SB Left	0.407	1.9	A
5	I-10 SB Ramps (NS) at Sandalwood Dr (EW)	Signalized	HCM 6th Edition	WB Left	0.374	19.3	B
6	I-15 NB On-Ramp (NS) at Sandalwood Dr (EW)	Two-way stop	HCM 6th Edition	EB Thru	0.016	0.0	A
7	Calimesa Blvd (NS) at Sandalwood Dr (EW)	Signalized	HCM 6th Edition	SB Left	0.879	27.9	C
8	I-10 NB Off-Ramp (NS) at Calimesa Blvd (EW)	Signalized	HCM 6th Edition	NB Left	0.865	29.3	C

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
4	7th St (NS) at Sandalwood Dr (EW)	Signalized	HCM 6th Edition	SB Left	0.492	4.7	A
5	I-10 SB Ramps (NS) at Sandalwood Dr (EW)	Signalized	HCM 6th Edition	SB Left	0.878	20.9	C
6	I-15 NB On-Ramp (NS) at Sandalwood Dr (EW)	Two-way stop	HCM 6th Edition	EB Thru	0.016	0.0	A
7	Calimesa Blvd (NS) at Sandalwood Dr (EW)	Signalized	HCM 6th Edition	NB Left	1.007	43.0	D
8	I-10 NB Off-Ramp (NS) at Calimesa Blvd (EW)	Signalized	HCM 6th Edition	NB Left	0.937	41.9	D

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	7th St (NS) at Project North Dwy (EW)	Two-way stop	HCM 6th Edition	WB Left	0.111	10.3	B
2	7th St (NS) at Project Central Dwy (EW)	Two-way stop	HCM 6th Edition	WB Left	0.046	10.4	B
3	7th St (NS) at Project South Dwy (EW)	Two-way stop	HCM 6th Edition	NB Thru	0.002	0.0	A
4	7th St (NS) at Sandalwood Dr (EW)	Signalized	HCM 6th Edition	SB Left	0.513	4.4	A
5	I-10 SB Ramps (NS) at Sandalwood Dr (EW)	Signalized	HCM 6th Edition	WB Left	0.405	18.6	B
6	I-15 NB On-Ramp (NS) at Sandalwood Dr (EW)	Two-way stop	HCM 6th Edition	EB Thru	0.017	0.0	A
7	Calimesa Blvd (NS) at Sandalwood Dr (EW)	Signalized	HCM 6th Edition	SB Left	0.936	29.6	C
8	I-10 NB Off-Ramp (NS) at Calimesa Blvd (EW)	Signalized	HCM 6th Edition	NB Left	0.884	32.9	C

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: 7th St (NS) at Project North Dwy (EW)

Control Type:	Two-way stop	Delay (sec / veh):	10.3
Analysis Method:	HCM 6th Edition	Level Of Service:	B
Analysis Period:	1 hour	Volume to Capacity (v/c):	0.111

RE: Sandalwood Travel Center Project Response to Comments
19317

Dear Ms. Grajeda:

INTRODUCTION

Ganddini Group, Inc. is pleased to offer this letter in response to City of Calimesa Traffic Impact Analysis Second Review (March 1, 2021) for the Sandalwood Travel Center Project. The comment letter is provided in Attachment A. An updated traffic impact analysis dated February 22, 2021 was prepared to incorporate previous comments from the first review (January 13, 2021).

COMMENT 1

Vehicles Miles Traveled (VMT)
Summary – (No Comments)
Consistent with City guidelines this land use project was assessed with the appropriate screening steps:

- Transit Priority Area (TPA) Screening
- Low VMT Area Screening
- Project Type Screening

The proposed Project satisfies the City established VMT screening criteria for Low VMT area screening and project type screening.

- The VMT screening analysis is accepted as submitted.

Response

Comment noted.

COMMENT 2

Specific TIA Report Comments

This updated report analysis eliminates the fair share contribution for intersection #8 due to the all-way stop (AWS) condition and analysis in the updated report.

Ms. Claudia Grajeda, Project Manager
J & T MANAGEMENT, INC.
February 22, 2021

Please reference the updated existing condition and the Level of Service effect now presented in the February 21 report; and thus the elimination of the previously stated deficiency and fair share contribution.

An addendum format, which may also serve as a RTC, can be presented for inclusion to the February 22, 2021 report. Please have the item stamped and signed by the project T.E. This will eliminate the need to revise the report.

Response

The update to the February 22, 2021 traffic impact analysis for intersection #8 was based on comment #3 of the first review, which noted that this intersection is all way stop controlled, and not cross street stop controlled. Therefore, with reanalysis as an all way stop controlled intersection, the existing LOS during the AM peak hour went from 55.9-F (first TIA as CSS) to 17.5-C (updated TIA as AWS). Thus, the intersection operates at acceptable LOS, and the deficiency and fair share contribution in the first TIA no longer applies.

CONCLUSION

We appreciate the opportunity to assist you with this project. Should you have any questions or if we can be of further assistance, please contact me at 714-975-3100.

Respectfully,

Bryan Crawford
Senior Transportation Planner

Giancarlo Ganddini, PE, PTP

LOCATION 7th Street

SUBJECT Traffic Impact Analysis / PC #2 Comments

Report dated February 22, 2021

The following Comments are being offered for the Traffic Impact Analysis dated February 22, 2021.

On behalf of the City of Calimesa, TKE Engineering has completed the second (2nd) review of the Traffic Impact Analysis Report for the Project known as Sandalwood Travel Center.

Vehicles Miles Traveled (VMT)
Summary – (No Comments)
Consistent with City guidelines this land use project was assessed with the appropriate screening steps:

- Transit Priority Area (TPA) Screening
- Low VMT Area Screening
- Project Type Screening

The proposed Project satisfies the City established VMT screening criteria for Low VMT area screening and project type screening.

- The VMT screening analysis is accepted as submitted.

Specific TIA Report Comments:

This updated report analysis eliminates the fair share contribution for intersection #8 due to the all-way stop (AWS) condition and analysis in this updated report.

Please reference the updated existing condition and the Level of Service effect now presented in the February 2021 report; and thus the elimination of the previously stated deficiency and fair share contribution.

An addendum format, which may also serve as a RTC, can be presented for inclusion to the February 22, 2021 report. Please have the item stamped and signed by the project T.E.
This will eliminate the need to revise the report.

Thank you for your submittal. Diligent effort is made, in the entitlement process, to provide comprehensive comments. The City reserves the right to include additional comments as deemed necessary and appropriate throughout the review process.

Trip Generation Comparison Analysis

August 19, 2022

Ms. Claudia Grajeda, Project Manager
J & T INVESTMENTS, INC.
139 Radio Road
Corona, California 92879

RE: Sandalwood Travel Center Trip Generation Comparison Analysis
Project No.: 19317

Dear Ms. Grajeda:

Ganddini Group, Inc. is pleased to provide this Trip Generation Comparison Analysis for the proposed Sandalwood Travel Center Project. The purpose of this trip generation comparison analysis is to evaluate the change in trip generation that can be expected between the original project as analyzed in the February 22, 2021 traffic impact analysis and the current site plan. We trust the findings of this analysis will aid you and the City of Calimesa in assessing the project.

PROJECT DESCRIPTION

The project site is located between 7th Street and the I-10 Freeway approximately 1,000 feet north of Sandalwood Drive in the City of Calimesa. Figure 1 illustrates the project location map.

The currently vacant project site was proposed to be developed with a 7,110 square foot travel center with eight (8) vehicle fueling positions, four (4) diesel fueling positions, and a fast-food restaurant with drive-through window in the February 22, 2021 traffic impact analysis. Figure 2 illustrates the proposed project site plan.

The currently vacant project site is currently proposed to be developed with a 7,034 square foot travel center with eight (8) vehicle fueling positions and four (4) diesel fueling positions. Access for the project site is proposed to 7th Street via three project driveways. The project north driveway is proposed as a full access driveway. The project central driveway is proposed as an outbound only full access driveway. The project south driveway is proposed as an inbound only full access driveway. On-site signage and pavement markings for these inbound and outbound only project driveways should be included in the final site design to the satisfaction of the City of Calimesa Department of Public Works. On-street parking on 7th Street will be prohibited. The project north driveway will service the normal travel center operations whereas the project central driveway and project south driveway will service the four (4) diesel fueling positions. Figure 3 illustrates the project site plan.

ORIGINAL PROJECT TRIP GENERATION PER FEBRUARY 22, 2021 TRAFFIC IMPACT ANALYSIS

Table 1 shows the original project trip generation based upon rates obtained from Institute of Transportation Engineers (ITE) *Trip Generation Manual* (10th Edition, 2017). Trip generation rates were determined for daily trips, AM peak hour inbound and outbound trips, and PM peak hour inbound and outbound trips for the proposed land use. Trip generation rates for Land Use Code 853 – Convenience

Market with Gasoline Pumps, Land Use Code 944 – Gasoline/Service Station, and Land Use Code 934 – Fast-Food Restaurant with Drive Through Window were used for the proposed project. The number of trips forecast to be generated by the proposed project are determined by multiplying the trip generation rates by the land use quantities.

As shown in Table 1, the proposed project is forecast to generate a total of approximately 3,693 daily trips, including 251 trips during the AM peak hour and 268 trips during the PM peak hour.

The total gross floor area for the convenience market and fast-food restaurant with drive-thru is 7,110 square feet. The convenience market is 3,849 square feet, the fast-food restaurant is 1,400 square feet, and the common area is 1,861 square feet. The common area consists of bathrooms, showers, laundry, storage, and a seating area for truckers. Approximately 80 percent of the common area has been allocated to the convenience center and 20 percent to the fast-food restaurant with drive-thru for trip generation purposes. Thus, the convenience market has been analyzed at 5,388 square feet and the fast-food restaurant with drive-thru has been analyzed at 1,772 square feet. For trip generation purposes, the convenience market would be shared by the standard gas station pumps and the diesel fueling facility pumps.

The trip generation forecast used for this analysis provides a very conservative estimate because the ITE trip generation rates for Land Use Code 944 represent the number of trips generated per vehicle fueling position at a standard passenger car fueling pump. ITE did currently provide trip generation rates for a diesel fueling facility when the analysis was conducted. In reality, the proposed diesel fueling stations are likely to have a much lower service rate due to longer fueling times and lower demand compared to passenger cars. Furthermore, the trip generation forecast does not include reductions for pass-by trips.

Land uses such as shopping centers, restaurants, gasoline stations, and convenience stores will often locate next to busy roadways to attract motorists already on the street. Since the trip generation rates contained in the ITE *Trip Generation Manual* represent vehicles entering and exiting at the site driveway(s), it is appropriate to reduce the initial trip generation forecast by the applicable pass-by trip rate when calculating the net new trips that will be added to the surrounding street system. Pass-by trip reductions were not applied in this analysis since 7th Street adjacent to the project site has minimal traffic volumes relative to the pass-by trip reduction that would be calculated based on ITE rates.

Traffic volumes shown in Table 1 consist of the total trips generated for each project land use. As a service station trip generated by the project may also interact with the restaurant land use within the project, a double counting of those trips occurs. To account for this internal interaction, the trips generated by the project site have been adjusted by 10 percent.

ORIGINAL PROJECT TRIP GENERATION UPDATED TO CURRENT ITE TRIP GENERATION MANUAL (11TH EDITION)

Table 2 shows the original project trip generation based upon rates obtained from ITE *Trip Generation Manual* (11th Edition, 2021). Trip generation rates were determined for daily trips, AM peak hour inbound and outbound trips, and PM peak hour inbound and outbound trips for the proposed land use. Trip generation rates for Land Use Code 945 – Convenience Store/Gas Station (2-4k GFA), Land Use Code 950 – Truck Stop, and Land Use Code 934 – Fast-Food Restaurant with Drive Through Window were used for the proposed project. The number of trips forecast to be generated by the proposed project are determined by multiplying the trip generation rates by the land use quantities. Conversion of the original project from the 10th edition to the 11th edition of the ITE *Trip Generation Manual* has been conducted for informational

purposes to show the land use and trip generation rate changes that would apply to the original project if the original project trip generation were to be calculated using the most recent ITE *Trip Generation Manual*.

As shown in Table 2, the original project converted to the 11th Edition of the ITE *Trip Generation Manual* is forecast to generate a total of approximately 3,304 daily trips, including 222 trips during the AM peak hour and 230 trips during the PM peak hour.

The total gross floor area for the convenience market and fast-food restaurant with drive-thru is 7,110 square feet. The convenience market is 3,849 square feet, the fast-food restaurant is 1,400 square feet, and the common area is 1,861 square feet. The common area consists of bathrooms, showers, laundry, storage, and a seating area for truckers and has been allocated in its entirety to the truck stop. For trip generation purposes, the convenience market would be shared by the standard gas station pumps and the diesel fueling facility pumps.

A truck stop as defined by ITE includes "Commercial vehicle fueling, space and supplies for self-service vehicle maintenance, and other services specific to the needs of truckers (e.g., showers, on-site trucking parking area. The facility typically contains a convenience store, restroom facilities, and one or more restaurants." Since the trip generation rates include convenience store, restroom facilities, showers, and other services specific to truckers, the 1,861 square feet of common area is included within the trip generation for this land use. It should be noted that a double counting of trips for the convenience market may occur since the Convenience Store/Gas Station (ITE Land Use Code 945) and Truck Stop (ITE Land Use Code 950) both include convenience market trips. Although this land use includes restaurants, the fast-food restaurant with drive-thru has been analyzed separately to provide for a conservative analysis.

Land uses such as shopping centers, restaurants, gasoline stations, and convenience stores will often locate next to busy roadways to attract motorists already on the street. Since the trip generation rates contained in the ITE *Trip Generation Manual* represent vehicles entering and exiting at the site driveway(s), it is appropriate to reduce the initial trip generation forecast by the applicable pass-by trip rate when calculating the net new trips that will be added to the surrounding street system. Pass-by trip reductions were not applied in this analysis since 7th Street adjacent to the project site has minimal traffic volumes relative to the pass-by trip reduction that would be calculated based on ITE rates.

Traffic volumes shown in Table 2 consist of the total trips generated for each project land use. As a service station trip generated by the project may also interact with the restaurant land use within the project, a double counting of those trips occurs. To account for this internal interaction, the trips generated by the project site have been adjusted by 10 percent.

CURRENT PROJECT TRIP GENERATION

Table 3 shows the current project trip generation based upon rates obtained from ITE *Trip Generation Manual* (11th Edition, 2021). Trip generation rates were determined for daily trips, AM peak hour inbound and outbound trips, and PM peak hour inbound and outbound trips for the proposed land use. Trip generation rates for Land Use Code 945 – Convenience Store/Gas Station (4-5.5k GFA) and Land Use Code 950 – Truck Stop were used for the proposed project. The number of trips forecast to be generated by the proposed project are determined by multiplying the trip generation rates by the land use quantities.

As shown in Table 3, the current project is forecast to generate a total of approximately 2,658 daily trips, including 243 trips during the AM peak hour and 220 trips during the PM peak hour.

The total gross floor area for the convenience market building is 7,034 square feet. The convenience market is 4,884 square feet and the common area is 2,150 square feet. The common area consists of bathrooms, showers, laundry, storage, and a seating area for truckers and has been allocated in its entirety to the truck stop. For trip generation purposes, the convenience market would be shared by the standard gas station pumps and the diesel fueling facility pumps.

A truck stop as defined by ITE includes "Commercial vehicle fueling, space and supplies for self-service vehicle maintenance, and other services specific to the needs of truckers (e.g., showers, on-site trucking parking area. The facility typically contains a convenience store, restroom facilities, and one or more restaurants." Since the trip generation rates include convenience store, restroom facilities, showers, and other services specific to truckers, the 1,861 square feet of common area is included within the trip generation for this land use. It should be noted that a double counting of trips for the convenience market may occur since the Convenience Store/Gas Station (ITE Land Use Code 945) and Truck Stop (ITE Land Use Code 950) both include convenience market trips.

Land uses such as shopping centers, restaurants, gasoline stations, and convenience stores will often locate next to busy roadways to attract motorists already on the street. Since the trip generation rates contained in the ITE *Trip Generation Manual* represent vehicles entering and exiting at the site driveway(s), it is appropriate to reduce the initial trip generation forecast by the applicable pass-by trip rate when calculating the net new trips that will be added to the surrounding street system. Pass-by trip reductions were not applied in this analysis since 7th Street adjacent to the project site has minimal traffic volumes relative to the pass-by trip reduction that would be calculated based on ITE rates.

Traffic volumes shown in Table 3 consist of the total trips generated for each project land use. As a service station trip generated by the project may also interact with the truck stop land use within the project, a double counting of those trips occurs. To account for this internal interaction, the trips generated by the project site have been adjusted by 10 percent.

TRIP GENERATION COMPARISON

Table 4 shows the difference in project trip generation between the original project and the proposed project.

As shown in Table 4, the original project as analyzed in the February 22, 2021 traffic impact analysis compared to the updated land uses and rates within the ITE *Trip Generation Manual* (11th Edition, 2021) is forecast to generate approximately 389 fewer daily trips, including 29 fewer trips during the AM peak hour and 38 fewer trips during the PM peak hour.

As shown in Table 4, the original project as analyzed in the February 22, 2021 traffic impact analysis compared to the current project and updated land uses and rates within the ITE *Trip Generation Manual* (11th Edition, 2021) is forecast to generate approximately 1,035 fewer daily trips, including 8 fewer trips during the AM peak hour and 48 fewer trips during the PM peak hour.

Ms. Claudia Grajeda, Project Manager
J & T INVESTMENTS, INC.
August 19, 2022

CONCLUSION

Based on the trip generation comparison analysis, the currently proposed project is forecast to generate fewer AM peak hour, PM peak hour, and daily trips compared to the original project as analyzed in the February 22, 2021 traffic impact analysis.

Therefore, the impact of the currently proposed project would be the same or less as documented in the February 22, 2021 traffic impact analysis and the currently proposed project does not warrant additional transportation analysis.

We appreciate the opportunity to assist you on this project. Should you have any questions or if we can be of further assistance, please do not hesitate to call at (714) 795-3100 x 103.

Sincerely,

GANDDINI GROUP, INC.

Trips Generated									
			AM Peak Hour			PM Peak Hour			
Land Use	Quantity	Units[2]	In	Out	Total	In	Out	Total	Daily
Convenience Market with Gasoline Pumps[3]	8	VFP	83	83	166	92	92	184	2,580
Diesel Fueling Facility/Gas Station[4]	4	VFP	21	21	42	28	28	56	688
Fast-Food Restaurant with Drive-Thru	1.772	TSF	36	35	71	30	28	58	835
Subtotal			140	139	279	150	148	298	4,103
Internal Capture (10%) [5]			*-14*	*-14*	*-28*	*-15*	*-15*	*-30*	*-410*
Total			126	125	251	135	133	268	3,693

Notes:

(1) ITE = Institute of Transportation Engineers *Trip Generation Manual* (10th Edition, 2017); ### = Land Use Code

(2) VFP = Vehicle Fueling Positions; TSF = Thousand Square Feet

(3) The total gross floor area for the convenience market and fast-food restaurant with drive-thru is 7,110 square feet. The convenience market is 3,849 square feet, the fast-food restaurant is 1,400 square feet, and the common area is 1,861 square feet. The common area consists of bathrooms, showers, laundry, storage, and a seating area for truckers. 80 percent of the common area has been allocated to the convenience center and 20 percent to the fast-food restaurant with drive-thru for trip generation purposes. Thus, the convenience market has been analyzed at 5,388 square feet and the fast-food restaurant with drive-thru has been analyzed at 1,772 square feet. For trip generation purposes, the convenience market would be shared by the standard gas station pumps and the diesel fueling facility pumps.

(4) A passenger car equivalent (PCE) is a metric to assess the impact of larger vehicles, such as trucks, recreational vehicles, and buses, by converting the traffic volume of larger vehicles to an equivalent number of passenger cars. In consultation with City of Calimesa staff, the passenger car equivalent for a Semi-Truck/RV using the Diesel fueling facility would be 3.0. Thus, each trip generated by the Diesel fueling facility would be equivalent to 3 passenger cars.

However, it is important to note that the trip generation used in this report for the Diesel fueling facility is a very conservative estimate because the ITE trip generation rates for Land Use Code 944 represent the number of trips generated per vehicle fueling position at a standard passenger car fueling pump. ITE does not currently provide trip generation rates for a Diesel fueling facility In reality, the proposed Diesel fueling stations are likely to have a much lower service rate due to longer fueling times and lower demand compared to passenger cars. Furthermore, the trip generation forecast does not include reductions for pass-by trips.

For these reasons, the passenger car equivalent of 3.0 was not applied to the trip generation for the Diesel fueling facility.

(5) An internal capture of 10% was applied to account for interaction between the land uses.

Table 2

Truck Stop[4]	4	VFP	27	28	55	33	29	62	896
Fast-Food Restaurant with Drive-Thru	1.4	TSF	32	31	63	24	22	46	654
Subtotal			123	123	246	131	125	256	3,671
Internal Capture (10%) [5]			*-12*	*-12*	*-24*	*-13*	*-13*	*-26*	*-367*
Total			111	111	222	118	112	230	3,304

Notes:

(1) ITE = Institute of Transportation Engineers *Trip Generation Manual* (11th Edition, 2017); ### = Land Use Code

(2) VFP = Vehicle Fueling Positions; TSF = Thousand Square Feet

(3) The total gross floor area for the convenience market and fast-food restaurant with drive-thru is 7,110 square feet. The convenience market is 3,849 square feet, the fast-food restaurant is 1,400 square feet, and the common area is 1,861 square feet. The common area consists of bathrooms, showers, laundry, storage, and a seating area for truckers and has been allocated in its entirety to the truck stop. For trip generation purposes, the convenience market would be shared by the standard gas station pumps and the diesel fueling facility pumps.

(4) A truck stop as defined by ITE includes "Commercial vehicle fueling, space and supplies for self-service vehicle maintenance, and other services specific to the needs of truckers (e.g., showers, on-site trucking parking area. The facility typically contains a convenience store, restroom facilities, and one or more restaurants." Since the trip generation rates include convenience store, restroom facilities, showers, and other services specific to truckers, the 1,861 square feet of common area is included within the trip generation for this land use. It should be noted that a double counting of trips for the convenience market may occur since the Convenience Store/Gas Station (ITE Land Use Code 945) and Truck Stop (ITE Land Use Code 950) both include convenience market trips. Although this land use includes restaurants, the fast-food restaurant with drive-thru has been analyzed separately to provide for a conservative analysis.

(5) An internal capture of 10% was applied to account for interaction between the land uses.

Table 3
Current Project Trip Generation

Trip Generation Rates									
			AM Peak Hour			PM Peak Hour			Daily
Land Use	Source[1]	Units[2]	% In	% Out	Rate	% In	% Out	Rate	Rate
Convenience Store/Gas Station (4-5.5k GFA)	ITE 945	VFP	50%	50%	27.04	50%	50%	22.76	257.13
Truck Stop	ITE 950	VFP	49%	51%	13.97	53%	47%	15.42	224.00

Trips Generated

Response to Third-Party Review Traffic Impact Assessment Comments

March 27, 2025

Ms. Claudia Grajeda, Project Manager
J & T MANAGEMENT, INC.
139 Radio Road
Corona, California 92879

RE: Sandalwood Travel Center Project Response to Comments (Addendum #2)
Project No. 19317

Dear Ms. Grajeda:

Ganddini Group, Inc. is pleased to offer this letter in response to City of Calimesa comments received via e-mail (March 11, 2025 via Monae Pugh) of the traffic impact analysis (TIA) for the project prepared by Ganddini Group (*Sandalwood Travel Center Traffic Impact Analysis*, February 22, 2021). The comments are included in Attachment A.

This response to comments letter will serve as Addendum #2 to the TIA, as requested by City of Calimesa staff.

GENERAL COMMENT

We are in receipt of the memo prepared by Ganddini Group dated February 25, 2025. The memo is generally accepted; with the following comments:

Response to General Comment

Comment noted. This letter will address the comments and serve as Addendum #2, as Addendum #1 dated February 22, 2021 has already been accepted.

COMMENT #1

The original application for entitlement was not completed; however, the Traffic Impact Analysis (TIA) was reviewed and accepted in 2021.

An addendum to the TIA, dated February 22, 2021 was also accepted.

Addendum #2 is required to memorialize the following items relative to the Mesa Verde cumulative project:

Response to Comment #1

Comment noted. While the TIA was approved in 2021, the original application for entitlement was not completed. With the February 22, 2021 addendum accepted, this document will serve as Addendum #2 to memorialize the comments included in the aforementioned March 11, 2025 e-mail related to the Mesa Verde cumulative project.

Ms. Claudia Grajeda, Project Manager
J & T MANAGEMENT, INC.
March 27, 2025

COMMENT #2

Prepare a Memorandum (Addendum #2) to the previously approved TIA acknowledging the proposed changes in the cumulative project.

Please have the item stamped and signed by the Project T.E.

Response to Comment #2

This document will serve as Addendum #2 to acknowledge the proposed changes to the Mesa Verde Specific Plan project. This document is stamped and signed by the Traffic Engineer.

COMMENT #3

Please include relative information from the Mesa Verde Specific Plan Amendment 2 (cumulative project):

Reduced Trip Generation for cumulative project.

Response to Comment #3

Assessment of the new trip generation for the Mesa Verde Specific Plan was performed based on review of the *Mesa Verde Specific Plan Area 2 Amendment 2 Traffic Analysis* (Urban Crossroads, October 24, 2024). The following is an assessment of this request:

1. The February 22, 2021 TIA for the Sandalwood Travel Center included the Mesa Verde Specific Plan as a cumulative project. Phase 1A of the Mesa Verde Specific Plan was included in the analysis as a cumulative project since it was forecast to be constructed and operational based on the available information at the time of analysis, provided by City of Calimesa staff, for opening year (2022) conditions.
2. The Mesa Verde Specific Plan Phase 1A, as analyzed in the TIA, has not been constructed and is currently not operational.
3. *The Mesa Verde Specific Plan Area 2 Amendment 2 Traffic Analysis* (Urban Crossroads, October 24, 2024) provides an updated analysis and timeline for the Mesa Verde Specific Plan.
4. As shown in *The Mesa Verde Specific Plan Area 2 Amendment 2 Traffic Analysis* (Urban Crossroads, October 24, 2024), the updated opening year for Phase 1 of the project is Year 2030.
5. Considering the proposed development (Sandalwood Travel Center) has not been developed and operational, the new opening year is estimated to be Year 2027 (2 years after existing year 2025 but three years prior to Phase 1 of the Mesa Verde Specific Plan).
6. Thus, Phase 1 of the Mesa Verde Specific Plan is not expected to be constructed and operational by the updated opening year (2027) for the proposed Sandalwood Travel Center project.

As stated, the first phase of the Mesa Verde Specific Plan has an updated opening year of 2030, which would not be constructed prior to the proposed project, even if assuming an updated estimated opening year of 2027 for the proposed Sandalwood Travel Center project. Thus, if the 2021 TIA was updated to reflect the new trip generation for the Mesa Verde Specific Plan based on its most recent 2024 TIA, it would be appropriate to remove the Mesa Verde Specific Plan from the cumulative list since it would not be generating traffic by the opening year of the Sandalwood Travel Center.

The following is a screenshot of the trip generation projected for Phase 1 of the Mesa Verde Specific Plan in the 2021 TIA:

Table 3
Other Development Trip Generation

Project Name	Land Use	Quantity	Units[1]	Trips Generated[2]						
				AM Peak Hour			PM Peak Hour			
				In	Out	Total	In	Out	Total	Daily
Summerwind Specific Plan[3]	Single-Family Detached Residential	600	DU	111	333	444	374	220	594	5,664

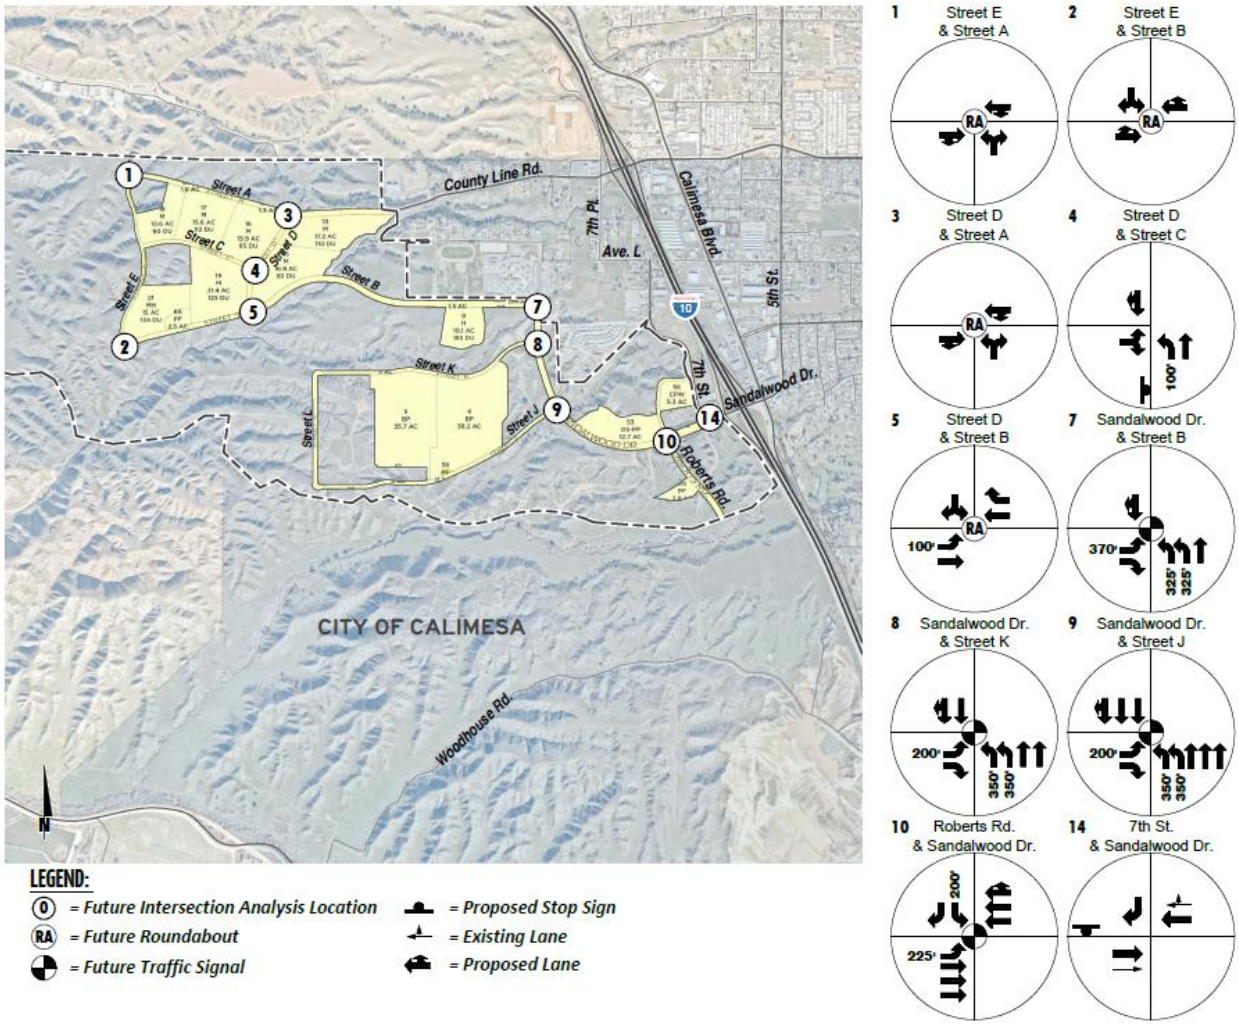
76/Circle K Fuel Station & C-Store[5]	Mixed-Use	--	--	79	66	145	73	69	142	2,836
RV Fueling Facility/Gas Station[6]	Mixed-Use	--	--	151	146	297	87	87	174	2,977
B&H Fuel Station & C-Store	Service Station w/ Convenience Market	8	VFP	51	49	100	57	55	112	1,643
	- Pass-By Reduction (62% AM, 56% PM)			-32	-30	-62	-32	-31	-63	-125
	Subtotal			19	19	38	25	24	49	1,518
18-121/CUP	Commercial Flex	37.211	TSF	9	6	15	7	8	15	463
17-103/CUP	Car Wash	1	ST	18	18	36	41	41	82	900
17-118/LUCR	Senior Attached Housing	96	DU	7	12	19	14	11	25	355
17-024/GPA/TTM 20040	Single-Family Detached Residential	29	DU	5	16	21	18	11	29	274
15-048/CUP/TTM 18167	Condominiums	57	DU	6	20	26	20	12	32	417
16-026/CUP, 15-137/ARC/TTM 17725	Condominiums	108	DU	11	38	49	38	22	60	791
14-151/CUP/ARC	Apartments	18	DU	2	6	8	6	4	10	132
17-089/LUCR	Duplex	2	DU	0	1	1	1	0	1	15
17-012/CUP	Multi-Family	14	DU	1	5	6	5	3	8	102
16-117/TTM 20031/CUP	Condominiums	68	DU	7	24	31	24	14	38	498
16-144/TTM 20066	Single-Family Detached Residential	18	DU	3	10	13	11	7	18	170
TTM 20252	Single-Family Detached Residential	13	DU	2	7	9	8	5	13	123
TTM 20263	Multi-Family	108	DU	11	38	49	38	22	60	791
20-118/CUP	Senior Housing	16	DU	1	2	3	2	2	4	59
20-088/LUCR	Multi-Family	3	DU	0	1	1	1	1	2	22
20-047/TPM	Single-Family Detached Residential	4	DU	1	2	3	2	1	3	38
20-046/TPM	Single-Family Detached Residential	4	DU	1	2	3	2	1	3	38
19-145/LUCR	Multi-Family	17	DU	2	6	8	6	4	10	124
Mesa Verde Specific Plan (Phase 1A)[7]	Single-Family Detached Residential	226	DU	42	125	167	141	83	224	2,133
Total				526	1,016	1,542	1,071	726	1,797	22,366

As shown above, the 2021 TIA included cumulative traffic in its analysis for the Mesa Verde Specific Plan, whereas, an updated Opening Year analysis would not include any cumulative traffic for the Mesa Verde Specific Plan due to its updated analysis. As such, the 2021 TIA is conservative being that it included cumulative traffic for the Mesa Verde Specific Plan, even if that project is no longer anticipated to be constructed by the proposed project opening year.

COMMENT #4

Please include relative information from the Mesa Verde Specific Plan Amendment 2 (cumulative project):



7th Street access restrictions (right-in/right-out @ Build-out year) effecting outbound Travel Center traffic.

Ms. Claudia Grajeda, Project Manager
J & T MANAGEMENT, INC.
March 27, 2025

Response to Comment #4

Exhibit 1-13: Phase 1 On-Site Recommendations from the *Mesa Verde Specific Plan Area 2 Amendment 2 Traffic Analysis* (Urban Crossroads, October 24, 2024) is as follows:

EXHIBIT 1-13 : PHASE 1 ON-SITE RECOMMENDATIONS

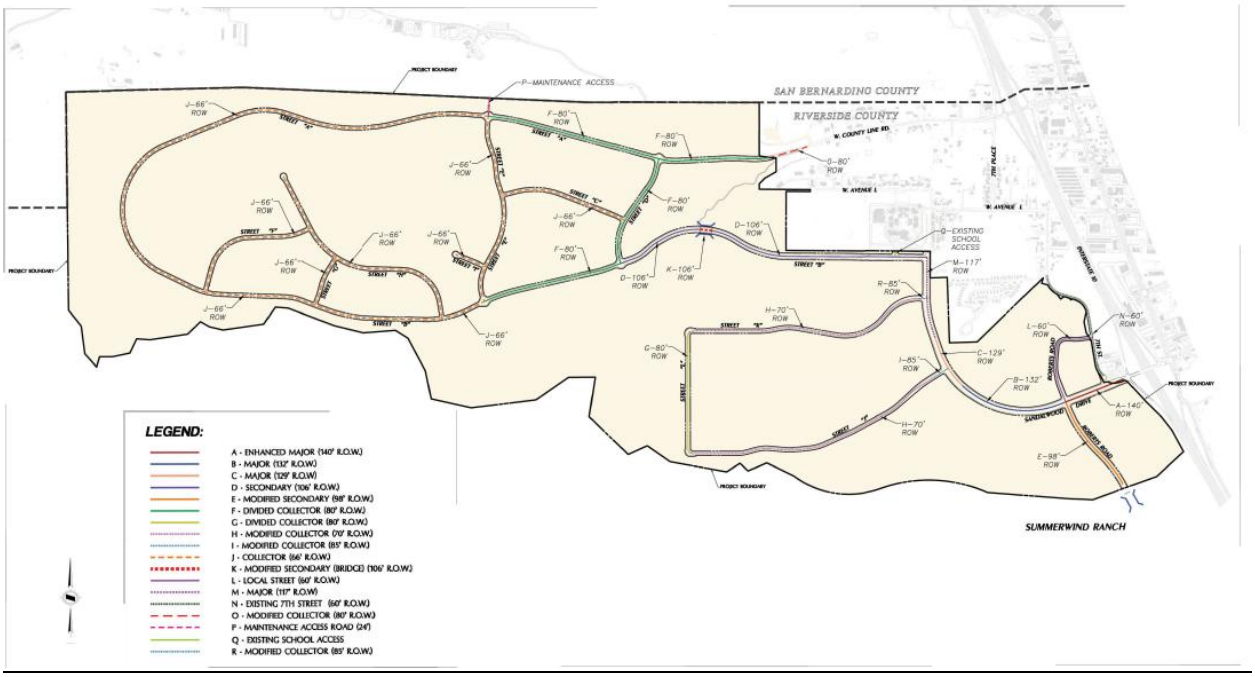
As shown in the above exhibit, the intersection of 7th Street at Sandalwood Drive (Int. #14) shows that the intersection will have future restrictions. A raised median will be constructed on Sandalwood Drive east-west through 7th Street prohibiting eastbound vehicles on Sandalwood Drive from making a left turn onto 7th Street and prohibiting southbound vehicles on 7th Street from making a left turn onto Sandalwood Drive.

As such, this will affect outbound traffic from the project site heading southbound on 7th Street from being able to make a left turn onto Sandalwood Drive since this turning movement will no longer be allowed.

Roberts Road will be constructed from Sandalwood Drive (west of 7th Street) connecting to 7th Street at the Project South Driveway. Project outbound traffic desiring to travel east will use Roberts Road in lieu of 7th Street to reach Sandalwood Drive upon completion of the Mesa Verde Specific Plan improvements at the

intersection of 7th Street/Sandalwood Drive. The response to the next comment explains this rerouting of outbound project traffic in greater detail.

COMMENT #5



Please include relative information from the Mesa Verde Specific Plan Amendment 2 (cumulative project):

Roberts Road alignment with 7th Street (reroute outbound traffic).

Response to Comment #5

Exhibit 1-11: Project Circulation and Roadway Classifications from the *Mesa Verde Specific Plan Area 2 Amendment 2 Traffic Analysis* (Urban Crossroads, October 24, 2024) shows the Roberts Road realignment as follows:

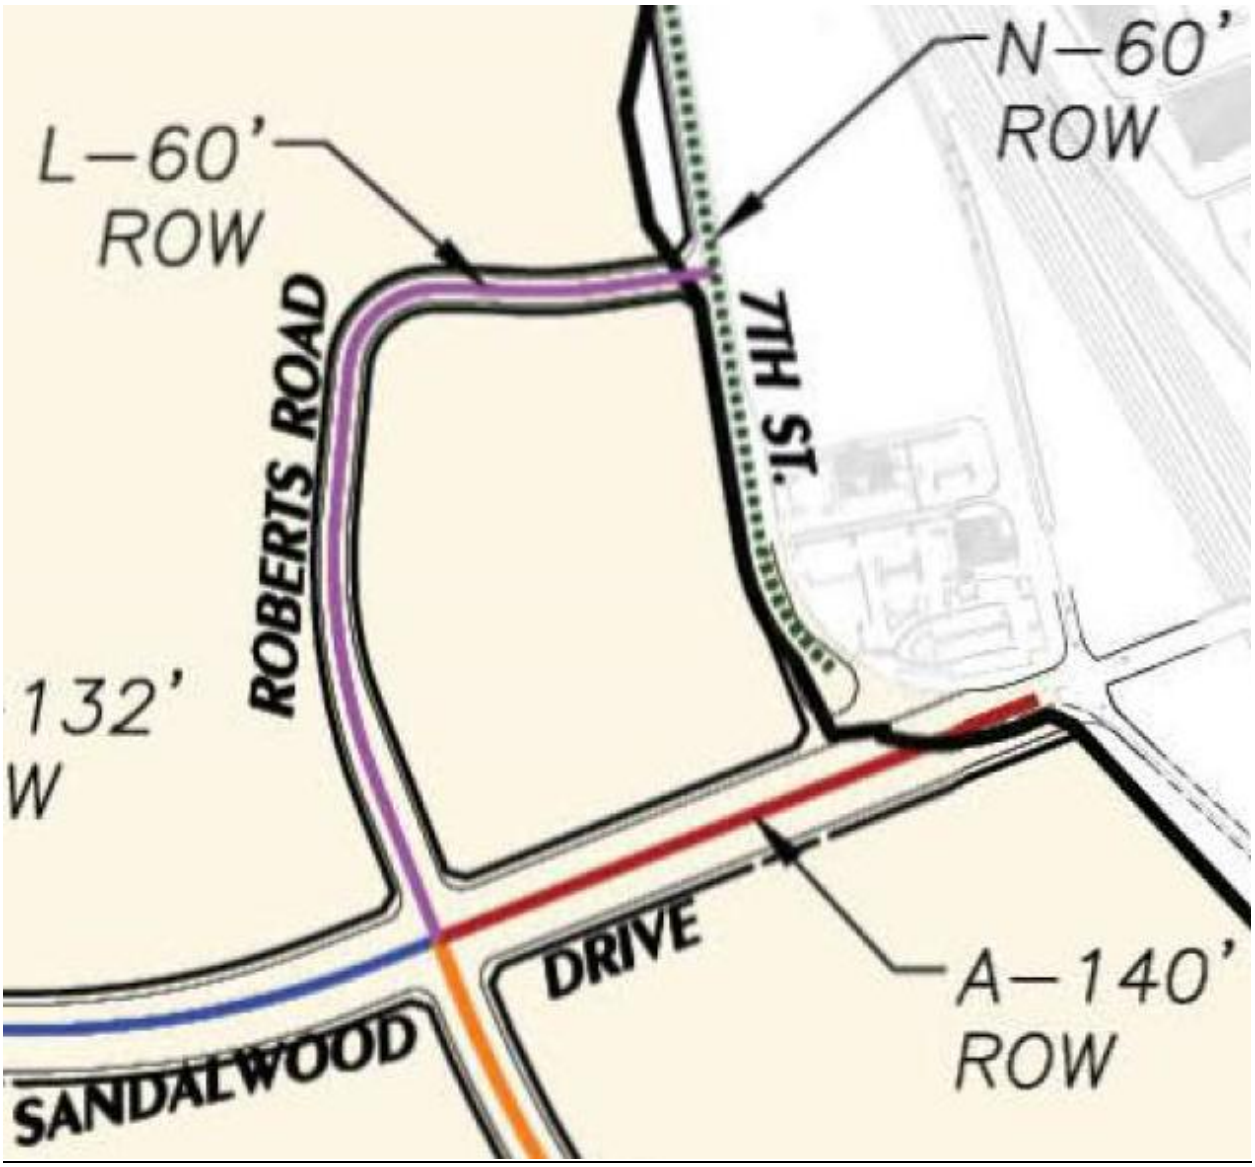


EXHIBIT 1-11 : PROJECT CIRCULATION AND ROADWAY CLASSIFICATIONS

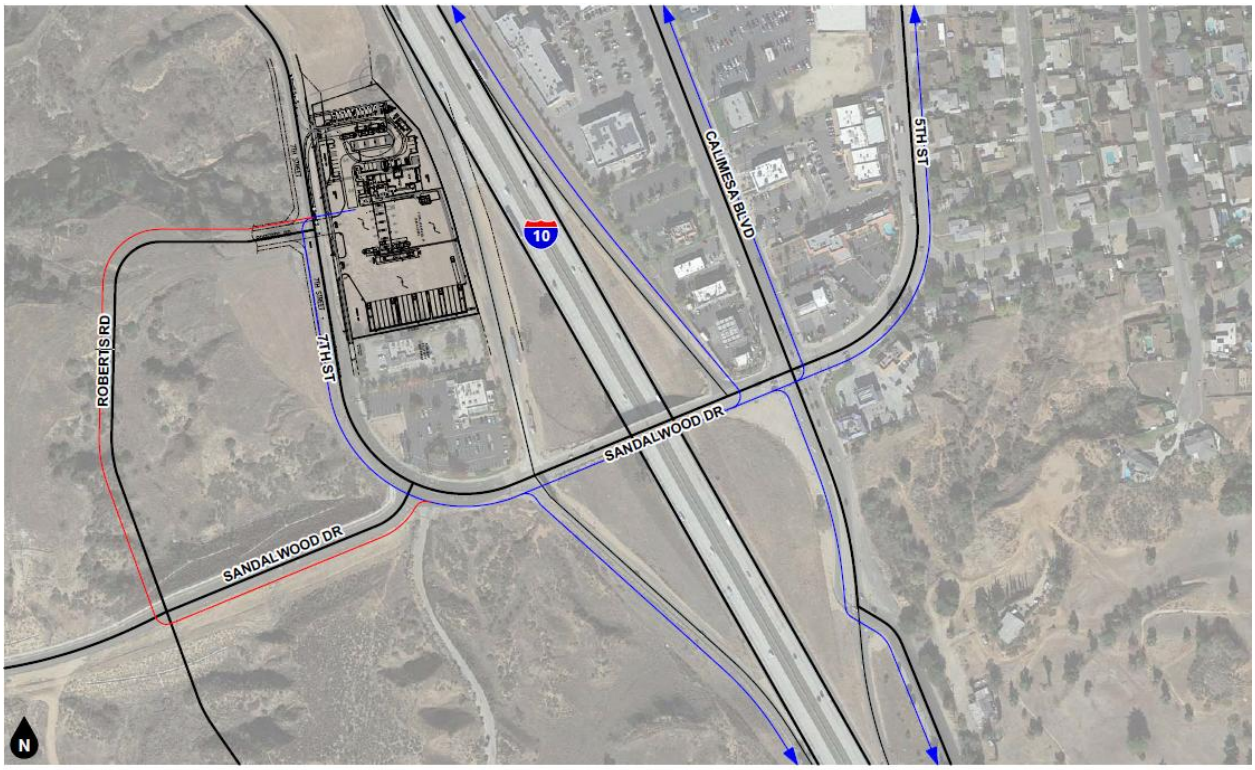


As shown above, Roberts Road (west of 7th Street) will be constructed south of Sandalwood Drive northbound to create a 4-legged intersection at Sandalwood Drive. Roberts Road will extend northbound from Sandalwood Drive making a near 90 degree turn eastbound connecting to 7th Street. A new intersection of 7th Street at Roberts Road will be constructed and the intersection will connect with the Project South Driveway.

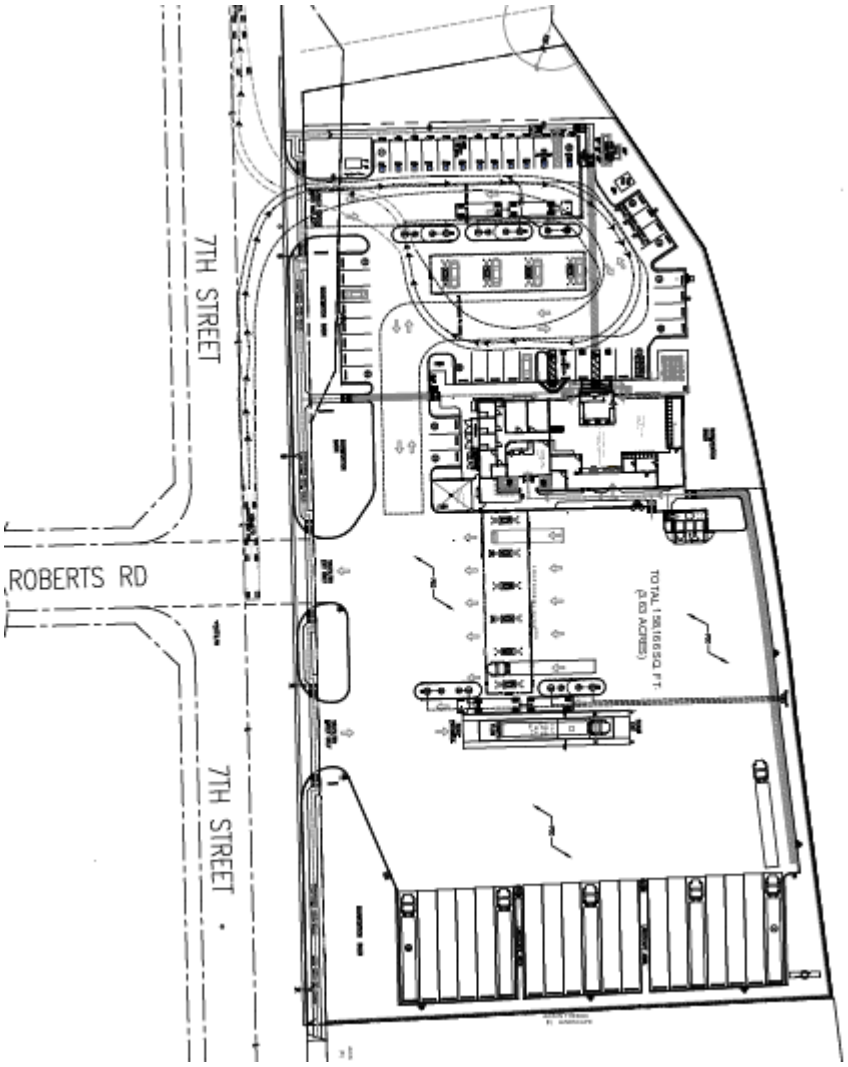
Roberts Road will be constructed as a Local Street (60-foot right-of-way) from Sandalwood Drive to 7th Street.

The following shows Roberts Road from 7th Street to Sandalwood Drive in greater detail:

The following shows outbound traffic using the intersection of 7th Street at Sandalwood Drive to head eastbound on Sandalwood Drive towards the I-10 Freeway as shown in the 2021 TIA prior to construction of the improvements for the Mesa Verde Specific Plan, as well as the rerouting of traffic that will occur using Roberts Road to the future intersection of Roberts Road at Sandalwood Drive to head eastbound towards the I-10 Freeway:

As shown above, instead of outbound project traffic heading southbound on 7th Street and making a left turn onto Sandalwood Drive to head eastbound toward the I-10 Freeway, outbound project traffic will travel down Roberts Road making a left turn onto Sandalwood Drive to head eastbound toward the I-10 Freeway.

Ms. Claudia Grajeda, Project Manager
J & T MANAGEMENT, INC.
March 27, 2025



COMMENT #6

Please include relative information from the Mesa Verde Specific Plan Amendment 2 (cumulative project):

Provide an updated Exhibit for the proposed roadway alignment of Roberts Road @ 7th Street.

Response to Comment #5

The following is the project site plan approved by the City of Calimesa last year that shows Roberts Road aligned with the Project South Driveway. As shown below, the outbound access for the Project South Driveway will align as the east leg of the 7th Street at Roberts Road intersection.

Ms. Claudia Grajeda, Project Manager
J & T MANAGEMENT, INC.
March 27, 2025

COMMENT #7

Revision to level of service analysis of your project study intersections or mitigation is not required due to reduced cumulative traffic loads.

Response to Comment #7

As stated in Response to Comment #3, the 2021 TIA included analysis of Phase 1 for the Mesa Verde Specific Plan as known at the time. Updated analysis indicates that Phase 1 of the Mesa Verde Specific Plan will not occur until 2030, which is after the Opening Year of 2027 for the proposed project. Thus, no traffic would be associated with the Mesa Verde Specific Plan if the 2021 TIA was updated; whereas; the 2021 TIA did account for Phase 1 traffic for the Mesa Verde Specific Plan.

Since potential reanalysis would reduce cumulative (Mesa Verde Specific Plan) traffic volumes to zero and the 2021 TIA included the Mesa Verde Specific Plan as a cumulative with cumulative traffic added to the roadway network (see Response to Comment #3), revision to Level of Service (LOS) analysis at the project study intersections including potential mitigation is not required. The 2021 TIA LOS analysis is a conservative analysis being that it includes cumulative traffic for the Mesa Verde Specific Plan.

CONCLUSION

We recommend that the City of Calimesa approve this response to comments letter as Addendum #2 to the TIA.

We appreciate the opportunity to assist you with this project. Should you have any questions or if we can be of further assistance, please contact us at 714-975-3100.

Respectfully submitted,

GANDDINI GROUP, INC.

Hi Claudia,

We are in receipt of the memo prepared by Ganddini Group dated February 25, 2025.

The memo is generally accepted; with the following comments:

The original application for entitlement was not completed; however, the Traffic Impact Analysis (TIA) was reviewed and accepted in 2021.

An Addendum to the TIA, dated February 22,2021 was also accepted.

Addendum #2 is required to memorialize the following items relative to the Mesa Verde cumulative project:

Prepare a Memorandum (Addendum #2) to the previously approved TIA acknowledging the proposed changes in the cumulative project.

Please have the item stamped and signed by the Project T.E.

Please include relative information from the Mesa Verde Specific Plan Amendment 2 (cumulative project:

- Reduced Trip Generation for cumulative project.
- 7th Street access restrictions (right-in/right-out @ Build-out year)) effecting outbound Travel Center traffic.
- Roberts Road alignment with 7th Street (reroute outbound traffic).
- Provide an updated Exhibit for the proposed roadway alignment of Roberts Road @ 7th Street.

- Revision to level of service analysis of your project study intersections or mitigation is not required due to reduced cumulative traffic loads.

Warm Regards,

Monae Pugh

Senior Traffic Engineer
